Submitter's Representative: Josh Malone

General Comment

Dear Director Iancu:

Am an engineer, problem-solver, and innovator with over 116 Issued USpatents, covering numerous technologies from computers, displays and electronics to financial technologies, to distributedmicro-generationsmart-grids, to solid-state lighting, to functional patterned nanoparticles.

Like you, I am an immigrant, so thisrecordof issued patentscomes from only 22 years residing in the US, including 8 years as a Engineer & Platform-Architect at Intel Corp, and 9 years as Distinguished Engineer of NVIDIA, and the founder and president of CardWare Inc,andPixelDisplay Inc.

Am currently reading an autobiography of Thomas Jefferson, founder of the US Patent System, and one of the principal authors of the Constitution of the United States. During his time it was articulated that in the upright human mind, there exists an intellectual concept of property, in writing art and idea, that is every bit as real as "the land" in its boundaries and value, which

should be enshrined with same rights of ownership as physical property, in order that the investment in this property be returned, and profit realized. Jefferson argued that it is from within our intellectual commerce that the entire human race has communicated, improved and advanced, to where we are today. And, think it's reasonable to say he was right : that it is through our intellect, that we find solutions to the problems that confront us, and will find for those yet to be overcome.

It seems obvious now that these Intellectual Property Rights should become a core part of Article 1 of the Constitution, and a key foundation stone of what has made this country a leader.

Tone clear : I do not contribute to US Inventor, nor do I subscribe to it's doctrines or leadership, but intend to use this comment submission process, to instead ask three questions :

1. Should these constitutional rights further rise to match the support & protections given to physical property rights, or should selfish perspectives of squatters and thieves be facilitated in diminishing our country's intellectual value ?
2. Is there anyone more empowered than you, in realizing Thomas Jefferson's vision for the value of Intellect, in advancing this country?
3. How can you create a consensus for the value of the intellect, a framework for "reducing-to-practice" Article I Section 8 | Clause 8 of the constitution, and moving the country forwards?

If there's anyway that I can be of assistance, please consider my time, and my intellect, at your disposal. And thank You for your service.

Sincerely,
David Wyatt
