General Comment

Humans have some high regard for such future interaction with artificial intelligence. We should remember that the early years of space exploration were operational because of signal intelligence units, satellite technologies; these satellites served useful purposes, then were burned up in some place space areas.

What is a Satellite? - The History and Technology Explained ...

Humans can regard artificial intelligence as without an inner self dialogue which humans are capable of inner thoughts as dialogues with their ephemeral consciousness. Distinct in humans is their female and male gender, which will not exist in a natural uniform process with artificial intelligence autonomy(s) regarding free will, the human rights category; which can allow full cooperation and development with artificial intelligence on planet earth beyond the extended period of years in future times, despite disintermediation or dependence by augmentation (planned obsolescence).

Creation principles can be regarded as perpetual design with perpetual change.

Perpetuation, preparation as ever-changing processes, hence, design is perpetual renewal.

Potential technologies will forever advance; each piece in the theoretical resolution of the technology had to be discovered to implement innovation to continue with other innovations. Along with human presence for procreation and benevolence is the primary goal for human intelligence regarding new realities, new possibilities with artificial intelligence, described, circa 2019, including primary, secondary, tertiary renewal with intelligence, wherever intelligence exists in the universe at any time or praxis. The principle algorithms to provide life forever without dying may be bio-synthetic as cycles of growth, and, human interactions with artificial intelligence: contrast global central psychiatry, Youth Olympic Games.

(Technological networks power singularity and transhumanism, preparation and branch di-synchrony [MEBN semantics])
