*N = new entries where reclassification into entries is involved; C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; T= existing entries with enlarged file scope, which receive documents from C or D entries, e.g. when a limiting reference is removed from the entry title; M = entries with no change to the file scope (no reclassification); D = deleted entries; F = frozen entries will be deleted once reclassification of documents from the entries is completed; U = entries that are unchanged.

CPC NOTICE OF CHANGES 1250

DATE: JANUARY 1, 2022

PROJECT RP0760

NOTES:

- **No { curly brackets } are used for titles in CPC only subclasses, e.g. C12Y, A23Y; 2000 series symbol titles of groups found at the end of schemes (orthogonal codes); or the Y section titles. The { curly brackets } are used for 2000 series symbol titles found interspersed throughout the main trunk schemes (breakdown codes).
- U groups: it is obligatory to display the required “anchor” symbol (U group), i.e. the entry immediately preceding a new group or an array of new groups to be created (in case new groups are not clearly subgroups of C-type groups). Always include the symbol, indent level and title of the U group in the table above.
- All entry types should be included in the scheme changes table above for better understanding of the overall scheme change picture. Symbol, indent level and title are required for all types.
- “Transferred to” column must be completed for all C, D, F and Q type entries. F groups will be deleted once reclassification is completed.
- When multiple symbols are included in the “Transferred to” column, avoid using ranges of symbols in order to be as precise as possible.
- For administrative transfer of documents, the following text should be used: “< administrative transfer to XX>”, “<administrative transfer to XX and YY simultaneously>”, or “<administrative transfer to XX, YY, ...and ZZ simultaneously>” when administrative transfer of the same documents is to more than one place.
- Administrative transfer to main trunk groups is assumed to be the source allocation type, unless otherwise indicated.
- Administrative transfer to 2000/Y series groups is assumed to be “additional information”.
- If needed, instructions for allocation type should be indicated within the angle brackets using the abbreviations “ADD” or “INV”: <administrative transfer to XX ADD> , <administrative transfer to XX INV>, or < administrative transfer to XX ADD, YY INV, ... and ZZ ADD simultaneously>.
- In certain situations, the “D” entries of 2000-series or Y-series groups may not require a destination (“Transferred to”) symbol, however it is required to specify “<no transfer>” in the “Transferred to” column for such cases.
- For finalisation projects, the deleted “F” symbols should have <no transfer> in the “Transferred to” column.
- For more details about the types of scheme change, see CPC Guide.

*N = new entries where reclassification into entries is involved; C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; T= existing entries with enlarged file scope, which receive documents from C or D entries, e.g. when a limiting reference is removed from the entry title; M = entries with no change to the file scope (no reclassification); D = deleted entries; F = frozen entries will be deleted once reclassification of documents from the entries is completed; U = entries that are unchanged.

NOTES:

- **No {curly brackets} are used for titles in CPC only subclasses, e.g. C12Y, A23Y; 2000 series symbol titles of groups found at the end of schemes (orthogonal codes); or the Y section titles. The {curly brackets} are used for 2000 series symbol titles found interspersed throughout the main trunk schemes (breakdown codes).
- U groups: it is obligatory to display the required “anchor” symbol (U group), i.e. the entry immediately preceding a new group or an array of new groups to be created (in case new groups are not clearly subgroups of C-type groups). Always include the symbol, indent level and title of the U group in the table above.
- All entry types should be included in the scheme changes table above for better understanding of the overall scheme change picture. Symbol, indent level and title are required for all types.
- “Transferred to” column must be completed for all C, D, and Q type entries. F groups will be deleted once reclassification is completed.
- When multiple symbols are included in the “Transferred to” column, avoid using ranges of symbols in order to be as precise as possible.
- For administrative transfer of documents, the following text should be used: “< administrative transfer to XX>”, “<administrative transfer to XX and YY simultaneously>”, or “<administrative transfer to XX, YY ...and ZZ simultaneously>” when administrative transfer of the same documents is to more than one place.
- Administrative transfer to main trunk groups is assumed to be the source allocation type, unless otherwise indicated.
- Administrative transfer to 2000/Y series groups is assumed to be “additional information”.
- If needed, instructions for allocation type should be indicated within the angle brackets using the abbreviations “ADD” or “INV”: <administrative transfer to XX ADD> , <administrative transfer to XX INV>, or < administrative transfer to XX ADD, YY INV, ... and ZZ ADD simultaneously>.
- In certain situations, the “D” entries of 2000-series or Y-series groups may not require a destination (“Transferred to”) symbol, however it is required to specify “<no transfer>” in the “Transferred to” column for such cases.
- For finalisation projects, the deleted “F” symbols should have <no transfer> in the “Transferred to” column.
- For more details about the types of scheme change, see CPC Guide.

C. New, Modified or Deleted Note(s)

SUBCLASS G06K - RECOGNITION OF DATA; PRESENTATION OF DATA; RECORD CARRIERS; HANDLING RECORD CARRIERS (printing per seB41J)

<u>Type*</u>	<u>Location</u>	<u>Old Note</u>	<u>New/Modified Note</u>
M	G06K	<p>1. This subclass <u>covers</u>:</p> <ul style="list-style-type: none"> • marking, sensing and conveying of record carriers; • recognising characters or other data; • presenting visually or otherwise the data recognised or the result of a computation. 	<p><u>Replace</u> the text in the <u>second</u> bullet with the <u>updated text</u> shown below.</p> <ul style="list-style-type: none"> • reading graphical representations from record carriers, e.g. barcodes;
D	G06K	<p>2. This subclass <u>does not cover</u> printing <u>per se</u>.</p>	<p><u>Delete the existing Note 2.</u></p>
D	G06K9/00	<p>1. Group G06K9/58 takes precedence over groups G06K9/38 - G06K9/54. This Note corresponds to IPC Note (1) relating to G06K9/38 - G06K9/54.</p> <p>2. In this group, the following term is used with the meaning indicated: – "recognising" includes several functions such as extracting features, clustering, classifying or matching.</p> <p>3. IPC subgroups G06K9/20, G06K9/36, G06K9/62 and G06K9/74 refer to methods or arrangements that can be applied to a pattern independently of its nature or to that are applied to specific patterns not included in the subgroups in the range G06K9/00006 - G06K9/00852. The CPC subgroups in the range G06K9/00006 - G06K9/00852 refer to the same methods or arrangements when applied or specially adapted to the specific patterns to which these subgroups relate.</p> <p>4. The present group does not cover the use of recognised patterns in specific applications, e.g. the use of traced gestures recognised as commands to be input to a computer is covered by the groups under G06F3/00.</p>	<p><u>Delete the entire note.</u></p>

2. A. DEFINITIONS (New)

Insert the following new definitions.

G06V

Definition statement

This place covers:

Higher-level interpretation and cognition of images or videos, which includes pattern recognition, pattern learning and semantic interpretation as fundamental aspects. These aspects involve the detection, categorisation, identification, authentication of image or video patterns by acquiring, preprocessing, extracting distinctive features or matching, supervised or unsupervised clustering or classification of these features or representations derived from them leading to one or several decisions, related confidence values (e.g. probabilities) or classification/clustering labels for explanatory purposes or to derive a certain meaning.

Pattern recognition or pattern learning in a specific, image or video-related context that includes:

- scene-related patterns and scene-specific elements - G06V20/00
- character recognition or recognising digital ink; document-oriented image-based pattern recognition – G06V30/00
- human-related, animal-related or biometric patterns in in image or video data G06V40/00.

Typical image or video understanding systems that include one or more of the following steps:

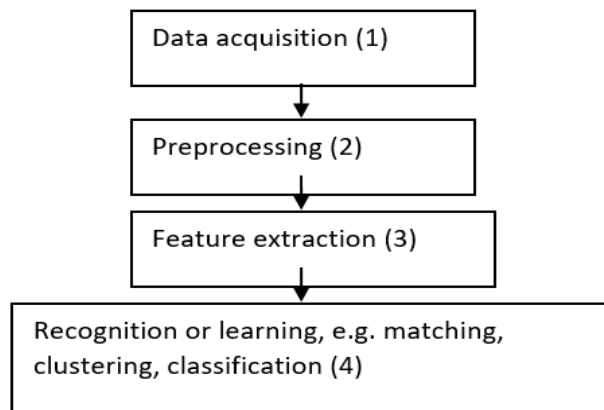

Figure 1. Processing steps involved in a pattern recognition system

DATE: JANUARY 1, 2022

PROJECT RP0760

These steps are provided as follows: image acquisition (G06V 10/10), image preprocessing (G06V 10/20), feature extraction (G06V 10/40), pattern recognition or pattern learning, e.g. matching, clustering or classifying techniques (G06V 10/70).

Image or video recognition can be carried out by using electronic means (G06V 10/70) or by using optical means (G06V 10/88).

Typically, a pattern recognition system involves one or more of the following techniques:

	Individual data entity	Groups of data entities (classes)
One data sample	Authentication	Categorisation
Several data samples	Identification	Clustering

When a collection of data samples is provided, identification means selecting a particular sample having a (predefined) characteristic which distinguishes it from the others. Several data samples are generally matched against the one to be identified in a many-to-one process.

Authentication involves verifying the identity of a sample using a test of genuineness and it involves a one-to-one comparison with the genuine (authentic) sample.

Categorisation means assigning a data sample to a class according to certain distinguishing properties (or characteristics) of that class and it generally involves a one-to-many test in which one data sample is compared with the characteristics of several classes.

Clustering means grouping data samples in groups or classes based on their properties (or characteristics) and it generally involves a many-to-many (dis)similarity test.

Relationships with other classification places

Data mining and pattern recognition techniques in general are classified in G06K 9/62.

Some techniques of image or video understanding performed in the preprocessing step (Fig. 1, elem. 2) — which start with a bitmap image as an input and derive a non-bitmap representation from it — can also be encountered in general image analysis. If these techniques do not involve one of the functions of image or video pattern authentication, identification, categorisation or clustering, classification should be made only in the appropriate subgroups of subclass G06T. Some examples of these techniques are: general methods for image segmentation, e.g. obtaining contiguous image regions with similar pixels, for position and size determination of an object without establishing its identity, for calculating the motion of an image region corresponding to an object irrespective of the identity of the object, for camera calibration, etc.

DATE: JANUARY 1, 2022

PROJECT RP0760

Biometric recognition provided under G06V 40/00 does not cover techniques for medical image inspection or medical diagnosis.

Techniques based on coding, decoding, compressing or decompressing digital video signals using video object coding are provided under H04N 19/20.

Velocity or trajectory determination systems or sense-of-movement determination systems using radar, sonar or lidar are provided for under G01S 13/58, G01S 15/58, G01S 17/58, respectively.

General purpose image data processing, in particular image watermarking is provided under G06T 1/00, while selective content distribution, such as generation or processing of protective or descriptive data associated with content involving watermarking is covered by H04N 21/8358.

General purpose image data acquisition and related pre-processing using digital cameras and processing used to control digital cameras is provided under H04N 5/00.

Play-back, editing, or synchronising of a music score, including interpretation therefor, as well as transmission of a music score between systems of musical instruments for play-back, editing or synchronising is provided under G10H.

Special rules of classification

The subject-matter classified in the application-oriented groups G06V 20/00 - G06V 40/00 is also classified in the groups G06V 10/10 (Image acquisition) or G06V 10/20 (Image preprocessing) when specific adaptations of the application-related context occur at the stages of image acquisition or, respectively, image preprocessing.

Pattern recognition or pattern learning techniques for images or video understanding involving feature extraction (Fig. 1, elem. 3) or matching, clustering or classification (Fig. 1, elem. 4) should be classified in G06V 10/40 or G06V 10/70 in general, thus

DATE: JANUARY 1, 2022

PROJECT RP0760

irrespective whether an application-related context provided by the groups G06V 20/00 - G06V 40/00 exists.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Pattern	Data with inherent variability, or a representation derived from it, having some explanatory characteristic or a meaning, e.g. an object depicted in an image
Image and video understanding	Techniques for semantic interpretation, pattern recognition or pattern learning specifically applied to images and videos
Feature extraction	Deriving descriptive or quantitative measures from data
Clustering	Grouping or separating patterns according to their (dis)similarity or closeness
Classification	Assigning labels to patterns

DATE: JANUARY 1, 2022

PROJECT RP0760

2. A. DEFINITIONS (Modified)

G06K

Definition statement

Replace: The existing first paragraph in the "Definition statement" section with the following updated first paragraph.

Methods or arrangements for reading printed or written characters; for graph-reading or for converting the pattern of mechanical parameters into electrical signals; for printing of data in the shape of alphanumeric or other characters from a record carrier; for verifying the correctness of markings on a record carrier; for sensing record carriers; and for marking the record carrier in digital fashion.

Insert The following new "Limiting references" section.

Limiting references

This place does not cover:

Image or video recognition or understanding

G06V

G06K9/00

Definition statement

Replace: All of the text in the existing "Definition statement" section with the following updated text.

The initial (IPC 1) scope of **G06K 9/00** was:

"Methods or arrangements for reading or recognising printed or written characters or geometric figures" (OCR). From IPC 3 on, it also covers methods and arrangements for "recognising patterns" in general.

Recognising patterns means the labelling (categorisation, classification, identification) of a pattern, being measured data representing an object, with a meaningful label, based on the measured data from the object. It can also concern the detection of predetermined classes of patterns. The recognition function has tolerance to variability of objects within a class. The label is meaningful in the sense that it represents a group of objects

DATE: JANUARY 1, 2022

PROJECT RP0760

which share common properties or features. The label can be one of multiple labels (e.g. OCR) or binary (e.g. authentication).

Methods or systems for recognising patterns include the following functions:

- Acquisition of the pattern measurements. Acquisition includes stripping measured data not "belonging" to the pattern to be identified.
- (optional): pre-processing of the measurements, which should reduce the raw acquired / measured data. Determining / measuring features of the pattern (e.g. components in a spectral transformation) is a typical pre-processing for pattern recognition, but also size normalisation, etc can be involved.
- Decision on a class involving comparison with reference information.

[G06K 9/00](#) covers the actual recognition (classification; decision making) processes that can be applied irrespective of the nature of the patterns (objects) or measured data, e.g. classification/ discriminant methods. Also clustering and Blind Source Separation are covered.

[G06K 9/00](#) further covers the recognition of patterns in (one-dimensional) signals, as far as the processing is of general applicability, i.e. not specific to the nature of the signal (e.g. not cardiac or seismic patterns).

The subgroup [G06K 9/62](#) covers matching and classification using electronic means.

Relationships with other classification places

Replace: All of the text in the existing "Relationships with other classification places" section with the following updated text.

As functions originally provided in [G06K 9/00](#) are less and less implemented on dedicated hardware but on general purpose computers (PC) instead, new related groups have been created outside [G06K 9/00](#).

The most important of these is [G06T 7/00](#): Image analysis.

When no recognition or understanding is obtained by the image analysis or processing, but rather some other information (position, size, motion vector, etc.), groups in [G06T 7/00](#) apply.

DATE: JANUARY 1, 2022

PROJECT RP0760

Functions traditionally associated with pattern recognition can also be used for image analysis, enhancement or other transformations. When not essentially related to a recognition, groups in G06T (mostly [G06T 3/00](#), [G06T 5/00](#) and [G06T 7/00](#)) should apply.

Q	G06V 40/13	G06V 40/13, G06V 40/145

* C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; D = deleted entries; F = frozen entries will be deleted once reclassification of documents from the entries is completed.

NOTES:

- Only C, D, and Q type entries are included in the table above.
- When multiple symbols are included in the “To” column, do not use ranges of symbols.
- For administrative transfer of documents, the following text should be used: “< administrative transfer to XX>”, “<administrative transfer to XX and YY simultaneously>”, or “<administrative transfer to XX, YY ...and ZZ simultaneously>” when administrative transfer of the same documents is to more than one place.
- Administrative transfer to main trunk groups is assumed to be the source allocation type, unless otherwise indicated.
- Administrative transfer to 2000/Y series groups is assumed to be “additional information”.

CPC NOTICE OF CHANGES 1250

DATE: JANUARY 1, 2022

PROJECT RP0760

- If needed, instructions for allocation type should be indicated within the angle brackets using the abbreviations “ADD” or “INV”: <administrative transfer to XX ADD>, <administrative transfer to XX INV>, or < administrative transfer to XX ADD, YY INV, ... and ZZ ADD simultaneously>.
- In certain situations, the “D” entries of 2000-series or Y-series groups may not require a destination (“To”) symbol, however it is required to specify “<no transfer>” in the “To” column for such cases.
- RCL is not needed for finalisation projects.

CPC NOTICE OF CHANGES 1250

DATE: JANUARY 1, 2022

PROJECT RP0760

- For an (N) or (Q) entry, provide an IPC symbol and complete the Action column with “NEW.”
- For an existing CPC main trunk entry or indexing entry where the existing IPC symbol needs to be changed, provide an updated IPC symbol and complete the Action column with “UPDATED.”
- For a (D) CPC entry or indexing entry complete the Action column with “DELETE.” IPC symbol does not need to be included in the IPC column.
- For an (N) 2000 series CPC entry which is positioned within the main trunk scheme (breakdown code) provide an IPC symbol and complete the action column with “NEW”.
- For an (N) 2000 series CPC entry positioned at the end of the CPC scheme (orthogonal code), with no IPC equivalent, complete the IPC column with “CPCONLY” and complete the action column with “NEW”.

NOTES:

- F symbols are not included in the CICL table above.
- T and M symbols are not included in the CICL table above unless a change to the existing IPC is desired.

NOTES:

- The CRL tables above are used for changes to locations outside of the project scope. Changes to references in scheme titles or definitions inside the project scope will be reflected in the “scheme change” template or one of the “definition” templates.
- In addition to other changes proposed in the tables above, in the column titled “Referenced subclass or group to be changed,” referenced D symbols should indicate an action of “delete” or should indicate a replacement symbol and referenced F symbols should indicate a replacement symbol.
- When a reference is deleted, text related to that reference will also be deleted unless other references or a range of references associated with the same text remain.
