*N = new entries where reclassification into entries is involved; C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; E= existing entries with enlarged file scope, which receive documents from C or D entries, e.g. when a limiting reference is removed from the entry title; M = entries with no change to the file scope (no reclassification); D = deleted entries; F = frozen entries will be deleted once reclassification of documents from the entries is completed; U = entries that are unchanged.

NOTES:

- **No {curly brackets} are used for titles in CPC only subclasses, e.g. C12Y, A23Y; 2000 series symbol titles of groups found at the end of schemes (orthogonal codes); or the Y section titles. The {curly brackets} are used for 2000 series symbol titles found interspersed throughout the main trunk schemes (breakdown codes).
- For U groups, the minimum requirement is to include the U group located immediately prior to the N group or N group array, in order to show the N group hierarchy and improve the readability and understanding of the scheme. Always include the symbol, indent level and title of the U group in the table above.
- All entry types should be included in the scheme changes table above for better understanding of the overall scheme change picture. Symbol, indent level, and title are required for all types except “D” which requires only a symbol.
- #“Transferred to” column must be completed for all C, D, F, and Q type entries. F groups will be deleted once reclassification is completed.
- When multiple symbols are included in the “Transferred to” column, avoid using ranges of symbols in order to be as precise as possible.
- For administrative transfer of documents, the following text should be used: “< administrative transfer to XX>” or “<administrative transfer to XX and YY simultaneously>” when administrative transfer of the same documents is to more than one place.
- Administrative transfer to main trunk groups is assumed to be “invention information”, unless otherwise indicated, and to 2000 series groups is assumed to be “additional information”.

2. A. DEFINITIONS (i.e. new or modified)

A23L3/00 (modified)

Preservation of foods or foodstuffs, in general, e.g. pasteurising, sterilising, specially adapted for foods or foodstuffs (preservation of flour or bread [A21D](#); processes specially adapted for particular foods or foodstuffs, see the relevant groups for the foods or foodstuffs in [A23](#); preserving foods or foodstuffs in association with packaging [B65B55/00](#); preservation of alcoholic beverages [C12H](#))

Definition statement

Preservation of foods or foodstuffs in general, e.g. by pasteurising, sterilising, heating, freezing, drying, pressurising, irradiation or treatment with chemicals, specially adapted for foods or foodstuffs.

Relationship between large subject matter areas

In relation to preservation of foods or foodstuffs in general, this main group is the primary home for this subject-matter. However, preservation subject matter specifically adapted for certain foods can also be found in subclasses [A21D](#), [A23B](#), [A23C](#), [A23D](#), [A23F](#), [A23G](#) or [A23J](#). These subclasses relate to flour or dough ([A21D](#)), dairy products ([A23C](#)), edible oils or fats ([A23D](#)), coffee, tea or their substitutes ([A23F](#)), cocoa, chocolate, confectionery or ice-cream ([A23G](#)) and protein compositions ([A23J](#)). For example, preservation of flour or dough or bakery products is subject-matter for subclass [A21D](#), and preservation of meat, fish, eggs, fruit, vegetables and edible seeds e.g. cereals is subject matter for subclass [A23B](#). Preservation of milk or milk preparations is subject matter for subclass [A23C](#).

In relation to preservation, deciding between this main group and the other subclasses listed above is generally a matter of function or application. Where the particular preservation technology is the main point of interest classification is made in this main group, and where the application to particular foodstuffs is the main interest classification is made in the subclasses listed above. Some double-classification is evident, see also special rules of classification below.

Special rules of classification within this group

[A23L3/00](#): general preservations methods for food. Specific methods for vegetables, meat, fish, eggs, cereals : [A23B](#). Double classification ([A23B/A23L3/00](#)) is sometimes necessary.

Non-limiting examples of situations where double classification is necessary :

- General method for preserving food but with specific examples for fish, meat;
- Specific method for preserving vegetables but a more specific subgroup exists in [A23L3/00](#) for the preservation method e.g. high pressure treatment.

Sterilisation and packaging : sterilisation of the food product before packaging (aseptic filling) : [B65B55/00](#), sterilisation after packaging : [A23L3/00](#).

[A61L2/00](#) for general (non-food) preservation methods

Beverage preservation is generally classified both in [A23L2/42](#) (et seq.) and [A23L3/00](#), when the preservation method is not strictly limited to non-alcoholic beverages. Same rule apply in [A23C](#) (milk preservation).

When classifying in [A23L3/00](#), [A23V2002/00](#) indexing system should also be used when appropriate, in accordance with [A23V2002/00](#) classification rules.

PROJECT RP0295

A23L5/00 (new)

Foods or foodstuffs; Their preparation or treatment (preservation thereof in general A23L3/00; {mechanical aspects A23P})

Definition statement

Any foods, foodstuffs that are not covered by the following subclasses :

A21D (Treatment, e.g. preservation, of flour or dough for baking, e.g. by addition of materials; Baking; Bakery products; Preservation thereof)

A23B (Preserving, e.g. by canning, meat, fish, eggs, fruit, vegetables, edible seeds; Chemical ripening of fruit or vegetables; The preserved, ripened, or canned products)

A23C (Dairy products, e.g. milk, butter, cheese; Milk or cheese substitutes; Making thereof)

A23D (Edible oils or fats, e.g. margarines, shortenings, cooking oils)

A23F (Coffee; Tea; Their substitutes; Manufacture, preparation, or infusion thereof)

A23G (Cocoa; Cocoa products, e.g. chocolate; Substitutes for cocoa or cocoa products; Confectionery; Chewing gum; Ice-cream; Preparation thereof)

A23J (Protein compositions for foodstuffs; Working-up proteins for foodstuffs; Phosphatide compositions for foodstuffs).

Examples of foods, foodstuffs or non-alcoholic beverages covered by this subclass are:

Foods or foodstuffs containing gelling or thickening agents;

Marmalades, jams, jellies or similar products;

Honey, royal jelly or other apiculture products;

Cereal-derived products including pasta;

Malt products, puddings or cream substitutes;

Spices, flavouring agents or condiments, whether natural or synthetic; artificial sweeteners; table salts; colouring agents;

Meat, poultry, egg, fish or seafood products;

Food consisting mainly of nut meat or seeds, e.g. peanut butter;

Soups or sauces; and

Preparation or treatment of the above foods, foodstuffs or non-alcoholic beverages provided for in this subclass, including:

Processing, technological aspects other than apparatuses as such, cooking, shaping, physical treatments of food not covered by other specific subclasses.

Cooking e.g. by roasting or frying;

Removing unwanted matter;

Physical treatment e.g. with wave energy, electric or magnetic fields;
 Preparation of fruit or vegetables, e.g. to make snacks, chips, sauerkraut or pickles;
 Colouring or decolouring; and
 Modifying the nutritive qualities, e.g. by adding vitamins, minerals or dietary fibres.
 Modification of such foods or beverages to change their nutritional content for dietary reasons, and these modified foods or beverages per se.
 Dietetic methods, functional foods, food or nutritional supplements

Relationship between large subject matter areas

In relation to foods, foodstuffs or non-alcoholic beverages per se, and in relation to their preparation and treatment including physical treatment, this main group is residual to subclasses [A21D](#), [A23B](#), [A23C](#), [A23D](#), [A23F](#), [A23G](#) or [A23J](#). These subclasses relate to flour or dough ([A21D](#)), dairy products ([A23C](#)), edible oils or fats ([A23D](#)), coffee, tea or their substitutes ([A23F](#)), cocoa, chocolate, confectionery or ice-cream ([A23G](#)) and protein compositions ([A23J](#)).

Special rules of classification within this group

All specific examples should be classified as additional information e.g. formulation examples of a new sweetener in a chewing gum formulation, bakery product, yogurt, ice cream, chocolate, beverage should be classified in the corresponding subclasses in addition to the relevant subgroup for the sweetener itself.

Dietetic beverages should also be classified in [A23L33/00](#) or lower subgroups (in addition to [A23L2/00](#))

When classifying in [A23L5/00](#), [A23V2002/00](#) indexing system should also be used when appropriate in accordance with [A23V2002/00](#) classification rules.

Processes, apparatus/device for shaping food in general should be classified in [A23P](#).

[A23L27/75](#) : includes cyclodextrin complexes

[A23L27/79](#): includes dissolvable flavoured films to placed in the mouth

[A23L27/30](#) : concerns sweetening agents. Sugars or other carbohydrates used for non-sweetening purposes (e.g. freezing point reducing agent, filler) are classified in [A23L29/30](#), double classification is occasionally possible.

[A23L33/00](#): modification of nutritive value without additive e.g. by selection, specific treatment (e.g. cultivation, cooking, processing)

[A23L33/30](#): only dietetic methods e.g. special dietetic or dietary regimens, not only for losing weight

[A23L33/40](#): food formulations comprising at least all macronutrients (proteins, lipids, carbohydrates). Pre- or post-operative nutritional compositions, complete foods formulations for special purposes or population (infant, elderly, pregnancy, etc.)

[A23L33/10](#) : Functional food (food or dietary supplement with dietetic or therapeutic indication) are classified in [A23L33/10](#) which is the main group for functional foods.

[A23L33/10](#) Also includes mixtures of additives and other additives not covered by subgroups [A23L33/105](#) to [A23L33/26](#). Those additives may also be classified in appropriate subgroups of [A23L5/00](#) (e.g. [A23L29/30](#) for sugars, [A23L31/00](#) for fungi).

Multiple classification for combination of ingredients is preferred when the ingredients are essential for the invention.

In addition, Indexing Codes [A23V2002/00](#) should be used for indicating a combination of additives and possibly together with their function.

[A23L33/135](#): is used for microorganism having an effect on health, generally probiotics.

[A23L29/065](#) is used when the microorganism is used for other purposes, e.g. flavouring, bioconversion of substances, fermentation.

[A23L13/42](#): comminuted meat is optional; additives in whole meat pieces are also classified here

Glossary of terms

Food	In addition to the commonly accepted foods or foodstuffs, the term in this subclass also extends to cover less traditional items such as thickening agents (e.g. starch), flavouring agents, artificial sweeteners, food colouring agents, etc.
Functional food /dietetic food / nutraceutical	food composition, formulation or supplement having an alleged effect on health or prevention of diseases.
Essential oil	A concentrated, hydrophobic liquid containing volatile aromatic compounds from plants
Nutritive value	The nutritive value represents the energetic or calorific content of nutrition

* C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; D = deleted entries.

NOTES:

- Only C, D, and Q type entries are included in the table above.
- When multiple symbols are included in the “To” column, avoid using ranges of symbols in order to be as precise as possible.
- For administrative transfer of documents, the following text should be used: “< administrative transfer to XX>” or “<administrative transfer to XX and YY simultaneously>” when administrative transfer of the same documents is to more than one place.
- Administrative transfer to main trunk groups is assumed to be “invention information”, unless otherwise indicated, and to 2000 series groups is assumed to be “additional information”.

- For an (N) or (Q) entry, provide an IPC symbol and complete the Action column with “NEW.”
- For an existing CPC main trunk entry or indexing entry where the existing IPC symbol needs to be changed, provide an updated IPC symbol and complete the Action column with “UPDATED.”
- For a (D) CPC entry or indexing entry complete the Action column with “DELETE.” IPC symbol does not need to be included in the IPC column.
- For an (N) 2000 series CPC entry which is positioned within the main trunk scheme (breakdown code) provide an IPC symbol and complete the action column with “NEW”.
- For an (N) 2000 series CPC entry positioned at the end of the CPC scheme (orthogonal code), with no IPC equivalent, complete the IPC column with “CPCONLY” and complete the action column with “NEW”.

NOTES:

- F symbols are not included in the CICL table above.
- E and M symbols are not included in the CICL table above unless a change to the existing IPC is desired.

NOTES:

- The CRL tables above are used for changes to locations **outside** of the project scope. Changes to references in scheme titles or definitions **inside** the project scope will be reflected in the “scheme change” template or one of the “definition” templates.
- In addition to other changes proposed in the tables above, in the column titled “Referenced subclass or group to be changed,” **referenced** D symbols should indicate an action of “delete” or should indicate a replacement symbol and **referenced** F symbols should indicate a replacement symbol.
- When a reference is deleted, text related to that reference will also be deleted unless other references or a range of references associated with the same text remain.
