A61B

DIAGNOSIS; SURGERY; IDENTIFICATION (analysing biological material <u>G01N</u>, e.g. <u>G01N 33/48</u>; obtaining records using waves other than optical waves, in general <u>G03B 42/00</u>)

Definition statement

This place covers:

Apparatus, instruments, implements, or processes that are either specially adapted or intended to be solely utilized utilised for evaluating, examining, measuring, monitoring, studying, or testing particular characteristics and aspects of either living or dead human and animal bodies for medical purposes (i.e. diagnosis). Diagnosis consists of scrutinizing scrutinising the following characteristics or aspects of bodies:

- internal or external portions of the bodies (e.g. lungs),
- abnormal bodily conditions (e.g. sickness, broken bones, detecting foreign bodies, pregnancy),
- mental conditions (e.g. psychotechniques), and
- bodily functions (e.g. heart beat, vision).

Apparatus, instruments, implements, or processes that are either specially adapted or intended to be solely utilised for medical procedures employing physical actions (e.g. laser cutting, pressure of fluid) on portions of human or animal bodies to correct, enhance, or inspect (e.g. autopsies) them for medical purposes (i.e. surgery). Surgery consists of the following medical procedures:

- repositioning (e.g. aligning broken bones, opening wounds) parts of bodies,
- stabilising (e.g. inserting bone pins) to prevent harmful movement of parts of bodies,
- repairing (e.g. fastening skin together, removing cancerous tissue) bodies,
- facilitating the occurrence of naturally occurring bodily functions (e.g. child birth, passing kidney stones) that are out of the ordinary,
- introducing, collecting, or removing cells and organs (e.g. inseminations, tissue sampling, hair transplants, skin grafting, biopsies, organ harvesting) to or from bodies, and
- introducing or taking out foreign objects (e.g. replacement heart valves, bullets) to or from bodies.

Apparatus, instruments, implements, or processes that are either specially adapted or intended to be solely utilised in procedures for identifying individual human beings (e.g. finger printing, by recognition of shape or dimension of body part) using unique characteristics of their bodies (i.e. identification). Adjunct or supplementary means specially adapted for use in, or intended for exclusive use in, diagnosis, surgery, or identification. These adjunct or supplementary means contribute to the effectiveness (e.g. surgical drapes) or safety (e.g. operating gloves) of a medical procedure, but may or may not (e.g. protective covers for scalpels) themselves involve any direct contact with a body.

Components of diagnosis, surgery, or identification means with structural features limiting their usefulness to medical procedures.

Relationships with other classification places

The prosthesis assessment or monitoring may produce an input signal useful for the control of prosthetics found in <u>A61F 2/482</u>, <u>A61F 2/70</u> or <u>A61F 2/72</u>.

Several subclasses provide for subject matter that is used for 'diagnosis'. The relationship between these subclasses with regard to the type of 'diagnosis' covered by each is as follows:

Subclass <u>A61B</u> provides for diagnosis in general. <u>A61B</u> also provides for any surgical or identification apparatus or methods when

- · the apparatus or methods are combined with diagnosis means or
- the apparatus can be used for diagnosis and either surgery or identification.

<u>A61B</u> additionally provides for any diagnostic apparatus or methods combined with therapy apparatus or method normally covered by subclass <u>A61H</u> or <u>A61N</u> when

- the same apparatus or methods are used for both purposes or
- combined together but only useable separately.

Subclass <u>A61H</u> provides for diagnostic means or steps that are combined with massage and physical therapy apparatus or methods used for the treatment of disease or disability (i.e. an abnormal condition of the body) by utilisation of direct mechanical energy; when the diagnostic means or step is used solely for operational feedback purposes to enhance therapy.

Subclass <u>A61N</u> provides for diagnostic means or steps that are combined with medical treatment therapy apparatus or methods used for the treatment of disease or disability by utilisation of forms of energy other than direct mechanical energy; when the means or step is used solely for operational feedback purposes to enhance therapy.

Special rules of classification

<u>A61B 1/00</u> - <u>A61B 1/127</u> deal with technical features of endoscopes. From <u>A61B 1/227</u> - <u>A61B 1/32</u> endoscopes are classified according to the body cavity where they are intended to be used.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

A number of glass rods with specially shaped ends, that are used in rigid endoscopes instead of several thin glass lenses to improve
image transmission properties and widen the field of view

A61B 1/00002

{Operational features of endoscopes}

Definition statement

This place covers:

Operational signal transmission and data processing related with endoscopes if not provided in other, more specific technical fields.

A61B 1/00006

{of control signals}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Automatic control of imaging devices	<u>A61B 1/045</u>
Automatic control of illumination devices	A61B 1/0655

A61B 1/00009

{of image signals during a use of endoscope}

Definition statement

This place covers:

Operational image processing for display during use of the endoscope, e.g. on-chip or by the camera control unit.

{extracting biological structures}

Definition statement

This place covers:

Extracting and/or emphasizing biological structures by image processing e.g. blood vessels for assessing depth, thickness, shape or patterns.

A61B 1/000095

{for image enhancement}

Definition statement

This place covers:

Enhancement processing of live image output quality, e.g. denoising, artifact removal, deblurring, edge enhancement.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Image fusion, information overlay or enrichment	<u>A61B 1/0005</u>
Image enhancement or restoration	<u>G06T 5/00</u>

A61B 1/000096

{using artificial intelligence}

Definition statement

This place covers:

Artificial intelligence and machine learning, e.g. details of AI model and its implementation, the training process, or training data generation.

A61B 1/00011

{characterised by signal transmission}

Definition statement

This place covers: All types of signal transmission.

A61B 1/00016

{using wireless means}

Definition statement

This place covers:

Wireless data transmission between probe within the body and external receiver.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Endoradiosondes	<u>A61B 5/07</u>

A61B 1/00018

{using electrical cables}

Definition statement

This place covers:

Wire based data transmission by electrical signals.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Electrical cables as such	<u>A61B 1/00114</u>
	1

A61B 1/00022

{removable}

Definition statement

This place covers:

Exchangeable memory like memory cards, e.g. for image recording or changing endoscope function.

A61B 1/00032

{internally powered}

Definition statement

This place covers: Power source integral with the endoscope, e.g. batteries.

A61B 1/00036

{Means for power saving, e.g. sleeping mode}

Definition statement

This place covers:

- Power saving features, e.g. in capsule endoscopes or displays
- Sleep/stand-by modes or varying sampling/transmission rates.

{provided with input arrangements for the user}

Definition statement

This place covers: All types of user input/interface means.

References

Informative references

Deflection control handles	<u>A61B 1/0052</u>
Handles for tip steering devices of catheters	A61M 25/0136

A61B 1/00043

{provided with output arrangements}

Definition statement

This place covers:

All types of output means, e.g. visual or acoustic.

{Constructional features of the display}

Definition statement

This place covers:

Display construction, e.g. portable, head mounted displays, supports for displays.

A61B 1/0005

{combining images e.g. side-by-side, superimposed or tiled}

Definition statement

This place covers:

Display of images obtained by endoscopes, combinations of images, combination of images and other data, e.g. graphs, ECG curves, pulse waveforms, alphanumeric data.

A61B 1/00052

{positioned at proximal end of the endoscope body}

Definition statement

This place covers:

Small display screen at the proximal end of the endoscope shaft, e.g. mounted on the handle.

A61B 1/00055

{for alerting the user}

Definition statement

This place covers:

Alerting/indicating to user of an operative condition/fault, e.g. by voice synthesiser, indicator lights. Includes physiological parameter of patient during endoscopic examination.

A61B 1/00057

{provided with means for testing or calibration}

Definition statement

This place covers:

All types of endoscope testing, e.g. optical performance, leak detection. Testing operation of endoscope, fault detection.

A61B 1/00059

{provided with identification means for the endoscope}

Definition statement

This place covers:

Endoscope provided with identification means, e.g. barcode, memory chip (ROM), coded resistor etc. May also include other data, e.g. operating data, manufacturer's serial number etc.

{provided with means for preventing overuse}

Definition statement

This place covers:

Limiting the number and/or duration of uses of an endoscope, e.g. by a counter/timer. Also limiting use to one patient by configuring endoscope to patient ID. Counting usage for payment.

References

Constructional details of flexible insertion parts, e.g. vertebral elements A61B 1/0055

A61B 1/00073

{with externally grooved shaft}

Definition statement

This place covers:

Groove(s) on external surface of endoscope to receive additional channel(s), e.g. for tools, suction, rinsing etc.

A61B 1/00078

{with stiffening means}

Definition statement

This place covers:

Details of endoscope shaft/sheath construction, including oversleeves, for stiffening.

A61B 1/0008

{characterised by distal tip features}

Definition statement

This place covers:

Distal tip features not separately provided for below, e.g. distal tips with certain shapes, protective caps, strengthening means, vibrating elements, heating etc.

A61B 1/00082

{Balloons}

Definition statement

This place covers:

Distal fluid inflatable balloons, e.g. for retaining endoscope in a fixed position within a body cavity or for enlarging visual field etc.

References

Informative references

Balloon catheters	<u>A61M 25/10</u> -
	A61M 25/1025

{Baskets}

Definition statement

This place covers:

Distal expandable basket/cage structure, e.g. for retaining endoscope at a fixed position within the body cavity or for spacing the imaging lens from the tissue surface.

A61B 1/00087

{Tools (A61B 17/00234 takes precedence)}

Definition statement

This place covers:

Distal tip tool as part of, mounted on or attached to the endoscope shaft or oversleeve, e.g. for displacing/cutting tissue.

References

Limiting references

This place does not cover:

Tools for introduction through a working channel	<u>A61B 17/00234</u>

Prevention of overuse	<u>A61B 1/00062</u>
Modular construction	<u>A61B 1/00105</u>

A61B 1/00105

{characterised by modular construction}

Definition statement

This place covers:

Modular construction of endoscope allows parts to be exchanged/replaced, e.g. different shafts used with the same handle. Also for disassembly of parts for easier cleaning. Multiple endoscopes interchangeably connected to a monitor unit.

{characterised by self-sufficient functionality for stand-alone use}

Definition statement

This place covers:

Portable endoscopes not requiring a physical connection to further supply or monitor units, e.g. including integrated power supply, light source and video controller, suction and fluid supply, telemetry and/or display means.

Synonyms and Keywords

In patent documents, the word/expression in the first column is often used instead of the word/ expression in the second column, which is used in the classification scheme of this place:

"sheath" "oversleeve"	
-----------------------	--

A61B 1/00137

{End pieces at either end of the endoscope, e.g. caps, seals or forceps plugs}

Definition statement

This place covers:

For closing or sealing openings at both ends of an endoscope, e.g. forceps plugs for the proximal end of a working channel.

A61B 1/0014

{Fastening element for attaching accessories to the outside of an endoscope, e.g. clips, clamps or bands}

Definition statement

This place covers:

Any type of fastening element to attach an accessory/tool/channel to the outside of the endoscope shaft, e.g. clip, clamp, loop, band.

{with means for preventing contamination, e.g. by using a sanitary sheath}

Definition statement

This place covers:

Prevention of contamination with bodily fluids of a patient, e.g. by a hygienic sheath covering the insertion tube of an endoscope.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Oversleeves or sheaths not mainly for hygiene, but comprising additional technical features like working channels	<u>A61B 1/00135</u>
Drapes for protection of surgical instruments	<u>A61B 46/10</u>

A61B 1/00148

{using anchoring means}

Definition statement

This place covers:

Propelling, advancing or securing of an endoscope in direct physical contact with tissue or anatomical structures of a patient, e.g. by balloons or tissue anchors provided on/with the endoscope.

{using articulated arms}

Definition statement

This place covers: Articulated arms for holding and positioning an endoscope.

A61B 1/00151

{using everted tubes}

Definition statement

This place covers:

Propelling/advancing endoscope by everted tube means, e.g. by turning the tube inside out.

A61B 1/00154

{using guiding arrangements for insertion}

Definition statement

This place covers:

Guiding arrangements positioned at the opening of a body cavity to aid insertion of the endoscope along the guiding arrangement and into the cavity, e.g. guide tubes or wires not fixed or attached to the endoscope shaft.

References

Introducing guidewires	<u>A61M 25/09041</u>

A61B 1/00163

{Optical arrangements (A61B 1/002, A61B 1/06 take precedence)}

Definition statement

This place covers:

Details of optical arrangements for transmitting image within the endoscope not covered by any lower ranking class. Includes jointed image paths using mirrors/prisms.

References

Limiting references

This place does not cover:

Rod-lens arrangements	<u>A61B 1/002</u>
Illuminating arrangements	<u>A61B 1/06</u>

Informative references

Attention is drawn to the following places, which may be of interest for search:

Distal optical elements	A61B 1/00096

A61B 1/00165

{with light-conductive means, e.g. fibre optics (A61B 1/07 takes precedence)}

Definition statement

This place covers:

Guiding light from distal to proximal end of the endoscope, not limited to imaging.

References

Limiting references

This place does not cover:

Guiding in particular illumination light from proximal to distal end of the	<u>A61B 1/07</u>
endoscope	

Informative references

Attention is drawn to the following places, which may be of interest for search:

Light guides per se	<u>G02B 6/00</u>
Light guides for industrial endoscopes	<u>G02B 23/26</u>

A61B 1/00167

{Details of optical fibre bundles, e.g. shape or fibre distribution}

References

Informative references

Optical fibre arrangements for illumination	<u>A61B 1/07</u>
---	------------------

{Details of single optical fibres, e.g. material or cladding}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Optical fibres for illumination	<u>A61B 1/07</u>
---------------------------------	------------------

A61B 1/00172

{with means for scanning}

Definition statement

This place covers:

2D/3D scanning of illumination and/or imaging light beams.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Distal mechanical or optical elements	<u>A61B 1/0008</u>
Optical coherence tomography	<u>A61B 5/0066</u>
Confocal scanning	<u>A61B 5/0068</u>
Optical scanning systems in general	<u>G02B 26/10</u>

A61B 1/00174

{characterised by the viewing angles}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Distal optical features in general	<u>A61B 1/00096</u>
Detachable distal elements	<u>A61B 1/00101</u>

A61B 1/00177

{for 90 degrees side-viewing}

Definition statement

This place covers:

Optical element at distal end of endoscope allows side-viewing.

{for off-axis viewing}

Definition statement

This place covers:

Optical element at distal end of endoscope sets the field-of-view at an angle to the longitudinal axis of the endoscope i.e. between 0-90 degrees, in forward or rearward direction.

A61B 1/00181

{for multiple fixed viewing angles (A61B 1/00193 takes precedence)}

Definition statement

This place covers:

Optical elements allow multiple different fixed views, e.g. combining either alternative or simultaneous 0 degree frontal and 90 degrees side-viewing.

References

Limiting references

This place does not cover:

Stereoscopic viewing	<u>A61B 1/00193</u>
----------------------	---------------------

A61B 1/00183

{for variable viewing angles}

Definition statement

This place covers:

Optical element at distal end of endoscope allows variable field of view, e.g. by rotation or deflection of a distal optical element.

A61B 1/00186

{with imaging filters}

Definition statement

This place covers:

Filters in the optical imaging path of an endoscope.

References

Informative references

Filters in the optical illumination path of an endoscope	<u>A61B 1/0646</u>
--	--------------------

{with focusing or zooming features}

Definition statement

This place covers:

Optical and/or mechanical arrangements for adjusting the focal point or magnification of an endoscope, e.g. for auto-focus or endo-microscopy.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Confocal scanning	<u>A61B 5/0068</u>
-------------------	--------------------

A61B 1/0019

{characterised by variable lenses}

Definition statement

This place covers:

Lens with variable refractive properties, e.g. fluid filled lens, Alvarez lens.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Variable lenses as such	<u>G02B 3/14</u>
-------------------------	------------------

A61B 1/00193

{adapted for stereoscopic vision}

Definition statement

This place covers:

Stereoscopic or three dimensional imaging, e.g. by combining images from two laterally spaced cameras.

References

Informative references

Stereoscopic vision for industrial endoscopes	<u>G02B 23/2415</u>
---	---------------------

{adapted for three-dimensional imaging}

Definition statement

This place covers:

Image acquisition and related image processing for three-dimensional imaging (3D), e.g. based on passive or active triangulation.

A61B 1/00195

{with eyepieces}

Definition statement

This place covers:

Features of the eyepiece, e.g. lens arrangement, attachment to endoscope shaft/camera etc. Includes binocular eyepieces.

A61B 1/00197

{characterised by multiple eyepieces}

Definition statement

This place covers:

Multiple eyepieces allowing more than one observer to view the image.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Binocular eyepieces	<u>A61B 1/00195</u>
---------------------	---------------------

A61B 1/002

having rod-lens arrangements (A61B 1/055 takes precedence)

References

Limiting references

This place does not cover:

Rod-lens arrangements in combination with a camera	<u>A61B 1/055</u>
--	-------------------

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

• "Rod lens" and "Hopkins optics"

Flexible endoscopes

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Catheters without visualisation	<u>A61M 25/00</u>
---------------------------------	-------------------

A61B 1/0051

{with controlled bending of insertion part}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Tip steering of catheters	<u>A61M 25/0133</u>
Articulated or flexible manipulators	<u>B25J 1/02</u>
Crawling robots for pipe lines	<u>F16L 55/28, F16L 55/34</u>

A61B 1/0052

{Constructional details of control elements, e.g. handles}

Definition statement

This place covers:

Operating elements for active control of bending, e.g. mechanical levers, dials or pulleys, but also electrical switches usually mounted on the handle.

References

Informative references

Endoscope handles in general	<u>A61B 1/00066</u>
Force transmission elements, e.g. control wires	<u>A61B 1/0057</u>
Controlled bending of the insertion part using shape memory elements	<u>A61B 1/0058</u>
Handles for tip steering devices of catheters	<u>A61M 25/0136</u>

{Constructional details of insertion parts, e.g. vertebral elements}

Definition statement

This place covers:

Backbone elements repetitively aligned and movably connected to each other to provide stability and flexibility to the insertion tube.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Articulations	A61B 1/008
---------------	------------

A61B 1/0057

{Constructional details of force transmission elements, e.g. control wires}

Definition statement

This place covers:

Operating elements for transmission of forces for the purpose of e.g. bending, flexing, twisting, pivoting or rotation of a flexible portion of the insertion tube.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Control elements, e.g. on the handle	<u>A61B 1/0052</u>
Articulations	<u>A61B 1/008</u>

A61B 1/008

Articulations

Definition statement

This place covers:

Means for interconnecting (rigid) backbone elements of the shaft to provide flexibility, e.g. hinges, joints or pivots.

A61B 1/009

{with bending or curvature detection of the insertion part}

Definition statement

This place covers:

Determining the bending state, curvature or shape of the insertion part by features inherent to the endoscope, not for locating or tracking the endoscope with respect to the body.

Guiding arrangements therefore

Definition statement

This place covers:

Guiding means, which are independent from the flexible endoscope and its integrated tip steering mechanisms, e.g. guide wires or insertion aids.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Guide tubes	<u>A61B 1/00154</u>
Guiding arrangements for catheters	<u>A61M 25/01</u>

A61B 1/0125

{Endoscope within endoscope}

Definition statement

This place covers:

Combination of at least 2 endoscopes, where one endoscope is introduced into the body cavity, e.g. by passing it through a channel of another endoscope.

A61B 1/015

Control of fluid supply or evacuation

Definition statement

This place covers:

Controlling fluid supply or evacuation to or from cavities of the human body.

References

Informative references

Fluid supply or evacuation to distal balloons	<u>A61B 1/00082</u>
Fluid supply or evacuation for cleaning purposes post-use	<u>A61B 1/121</u>
Fluid supply or evacuation for cleaning purposes in-use	<u>A61B 1/126</u>

for receiving instruments

Definition statement

This place covers:

All kind of working channels for insertion of medical instruments thought the endoscope shaft, e.g. for minimally invasive surgery.

A61B 1/04

combined with photographic or television appliances

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Camera adapters	<u>G03B 17/48</u>
Television cameras	H04N 23/00

A61B 1/041

{Capsule endoscopes for imaging}

Definition statement

This place covers:

Small mostly capsule type cameras, usually but not necessarily swallowed for minimally invasive visual documentation e.g. of the gastroenterologic tract or blood vessels. Often in combination with miniaturized on-board diagnostic or therapeutic tools.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Wireless transmission of control or image signals	<u>A61B 1/00016</u>
Internal power supply, e.g. by batteries	<u>A61B 1/00032</u>
Capsule type diagnostic sensors without visualization	<u>A61B 5/07</u>

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

• "Capsule endoscope" and "Pill camera"

{characterised by a proximal camera, e.g. a CCD camera}

Definition statement

This place covers:

Endoscopic cameras integrated into or detachably fixed to the proximal end of an endoscope.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Cameras in the distal end portion of an endoscope	<u>A61B 1/05</u>
Image processing e.g.	<u>G06T 7/0012</u>
Details of the TV cameras	H04N 23/00

A61B 1/043

{for fluorescence imaging}

Definition statement

This place covers:

Visual imaging of tissue fluorescence induced e.g. by exogenously administered fluorophores or endogenous autofluorescence.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Filters in the imaging path	<u>A61B 1/00186</u>
Monochromatic illumination	<u>A61B 1/063</u>
Polychromatic illumination	<u>A61B 1/0638</u>
Filters in the illumination path	<u>A61B 1/0646</u>
Detection of tissue fluorescence not resulting in an image	<u>A61B 5/0059</u>

A61B 1/044

{for absorption imaging}

Definition statement

This place covers:

Visual imaging of tissue absorbance with or without contrast agents, e.g. using infrared light.

{for infrared imaging}

Definition statement

This place covers: Infrared (IR) or near infrared (NIR) imaging indent from the used light source.

A61B 1/051

{Details of CCD assembly}

Definition statement

This place covers: Details of mounting the CCD chip in the distal tip of the endoscope.

A61B 1/06

with illuminating arrangements

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Illumination arrangements for industrial endoscopes	<u>G02B 23/2461</u>
---	---------------------

A61B 1/0605

{for spatially modulated illumination}

Definition statement

This place covers:

Illumination arrangements with spatially modulated light patterns, e.g. LCDs or spatially arranged illumination fibers.

A61B 1/0607

{for annular illumination}

Definition statement

This place covers:

Illumination arrangements where light exits the endoscope forwardly in multiple points or circularly, including illumination sources for the oral cavity not incorporated in the endoscope shaft.

{for radial illumination}

Definition statement

This place covers:

Illumination arrangements where light exits the endoscope radially (perpendicularly to the longitudinal axis). Single or multiple illumination ports.

A61B 1/0623

{for off-axis illumination}

Definition statement

This place covers:

Illumination of cavity at an angle to the longitudinal axis of the endoscope other than at 90 degrees.

A61B 1/0625

{for multiple fixed illumination angles}

Definition statement

This place covers:

Optical elements allow multiple different fixed illumination angles, e.g. combining either alternative or simultaneous 0 degrees frontal and 90 degrees side illumination.

A61B 1/0627

{for variable illumination angles}

Definition statement

This place covers:

Optical element at distal end of endoscope allows variable illumination angles, e.g. by rotation or deflection of a distal optical element.

A61B 1/063

{for monochromatic or narrow-band illumination}

Definition statement

This place covers:

- Lasers or laser diodes
- Quasi-monochromatic light sources like narrow-band filtered lamps or LEDs.

References

Informative references

Illumination filters	<u>A61B 1/0646</u>
----------------------	--------------------

{providing two or more wavelengths}

Definition statement

This place covers:

Illumination with multiple spectral bands, e.g. for fluorescence endoscopy.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Fluorescence spectroscopy without visual imaging	<u>A61B 5/0071</u> or G01N 21/64
	<u>GUTN 21/04</u>

A61B 1/0646

{with illumination filters}

Definition statement

This place covers:

Optical filters provided in the illumination path of the endoscope, e.g. for fluorescence endoscopy.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Filters in the optical imaging path of an endoscope	A61B 1/00186
---	--------------

A61B 1/0653

{with wavelength conversion}

Definition statement

This place covers:

Endoscope comprising one or several light source(s), e.g. semiconductor light source or LEDs, that illuminate(s) a fluorescent material, e.g. phosphor, to emit light at a different wavelength than the exciting light.

A61B 1/0655

{Control therefor}

Definition statement

This place covers:

Automatic control of illumination-related settings such as intensity, spectral, geometric or pulse properties e.g. of the light source, apertures or other optical elements in the illumination path and based e.g. on measured parameters or image processing.

{Endoscope light sources}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

	50.41
Lightning devices in general	<u>F21L</u>

A61B 1/0669

{at proximal end of an endoscope}

Definition statement

This place covers:

External or internal light sources coupled to or positioned at the proximal end of an endoscope for illumination.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Cables to couple a light source to an endoscope	<u>A61B 1/00117</u>
Connectors to couple a light source to an endoscope	A61B 1/00126

A61B 1/0692

{head mounted}

Definition statement

This place covers:

Headlamps, e.g. used for dental or ENT applications.

A61B 1/07

using light-conductive means, e.g. optical fibres

Definition statement

This place covers:

Guiding illumination light from proximal to distal end of the endoscope.

References

Informative references

Guiding light from distal to proximal end of the endoscope, not limited to imaging	<u>A61B 1/00165</u>
Details of optical fibre bundles	A61B 1/00167

Light guides per se	<u>G02B 6/00</u>
Light guides for illumination in industrial endoscopes	<u>G02B 23/2469</u>

with cooling or rinsing arrangements

Definition statement

This place covers:

Fluid supply or evacuation for functional purposes of the endoscope.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Fluid supply or evacuation to or from cavities of the human body	<u>A61B 1/015</u>
--	-------------------

A61B 1/121

{provided with means for cleaning post-use}

Definition statement

This place covers:

Cleaning, e.g. physically, of endoscopes and/or parts thereof after use.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Cleaning of endoscopes in-use	<u>A61B 1/126</u>
Cleaning of surgical instruments	<u>A61B 90/70</u>
Cleaning of dental instruments	<u>A61C 19/002</u>
Disinfection or sterilisation	<u>A61L 2/00</u>
Cleaning of hollow articles in general	<u>B08B 9/00</u>

A61B 1/122

{using cleaning tools, e.g. brushes}

Definition statement

This place covers:

Tools for cleaning endoscopes after use, e.g. cleaning swabs or brushes inserted into endoscope channel.

{using washing machines}

Definition statement

This place covers:

Washing machines specially adapted for cleaning endoscopes.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Disinfection or sterilisation	<u>A61L 2/00</u>

A61B 1/125

{using fluid circuits}

Definition statement

This place covers: Fluid circulation in the endoscope during endoscope cleaning cycle.

A61B 1/126

{provided with means for cleaning in-use}

Definition statement

This place covers:

Active cleaning of endoscope parts during use, e.g. of distal windows to maintain vision.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Distal nozzles	<u>A61B 1/00091</u>
Cleaning of endoscopes post-use	<u>A61B 1/121</u>

A61B 1/127

{with means for preventing fogging (A61B 1/253 takes precedence)}

Definition statement

This place covers:

Prevention of fogging, e.g. by dedicated covers or coatings.

References

Limiting references

This place does not cover:

Active cleaning of endoscopes in-use	<u>A61B 1/126</u>
Means for preventing fogging of dentists mirrors	<u>A61B 1/253</u>

A61B 1/128

{provided with means for regulating temperature}

Definition statement

This place covers:

Monitoring/controlling/regulation of temperature in an endoscope (shaft or handle) and related units like proximal light sources.

A61B 1/24

for the mouth, i.e. stomatoscopes, e.g. with tongue depressors (tongue depressors per se <u>A61B 13/00</u>); Instruments for opening or keeping open the mouth (combined with saliva removers <u>A61C 17/00</u>; mouth openers for animals <u>A61D 15/00</u>)

References

Limiting references

This place does not cover:

Light based diagnosis of oral or dental tissue	A61B 5/0088
с с	

Informative references

Attention is drawn to the following places, which may be of interest for search:

Tongue depressors per se	<u>A61B 13/00</u>
Combined with saliva removers	<u>A61C 17/00</u>
Mouth openers for animals	<u>A61D 15/00</u>

A61B 1/32

Devices for opening or enlarging the visual field, e.g. of a tube of the body (dilators <u>A61M 29/00</u>)

Definition statement

This place covers:

Devices for enlarging natural openings of the human body for visual inspection, e.g. specula or the like.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Tractors for holding wounds open	<u>A61B 17/02</u>
Surgical trocars for introduction into natural body openings	A61B 2017/345
Dilators	<u>A61M 29/00</u>

A61B 3/00

Apparatus for testing the eyes; Instruments for examining the eyes (eye inspection using ultrasonic, sonic or infrasonic waves <u>A61B 8/10</u>; devices for treatment of the eyes <u>A61F 9/00</u>; exercisers for the eyes <u>A61H 5/00</u>; optical systems in general <u>G02B</u>)

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Eye inspection using ultrasonic, sonic or infrasonic waves	<u>A61B 8/10</u>
Devices for treatment of the eyes	<u>A61F 9/00</u>
Exercisers for the eyes	<u>A61H 5/00</u>
Optical systems in general	<u>G02B</u>
Spectacles and contact lenses	<u>G02C</u>

Special rules of classification

<u>A61B 3/02</u> - <u>A61B 3/09</u> for subjective testing i.e. with patient feedback and <u>A61B 3/10</u> - <u>A61B 3/158</u> for objective testing i.e. without patient feedback

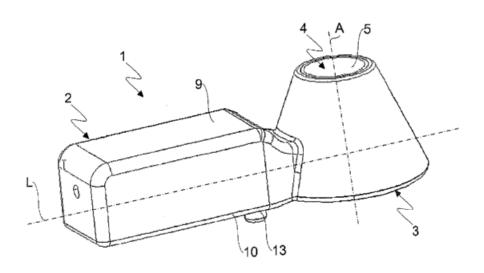

The breakdown symbols (i.e. the non "parallel" or non "mirror" symbols) and "orthogonal" symbols are to be used for classifying the invention information (in addition to the invention symbols) in case the invention is insufficiently classified by an invention information symbol. They are also to be used for classifying the additional information. They are stored in the additional information field.

{provided with illuminating means (<u>A61B 3/117</u> takes precedence; goniolenses used for laser treatment <u>A61F 9/009</u>; illuminating means for optical instruments <u>G02B 27/00</u>)}

Definition statement

This place covers:

Illuminating means for examining the eyes (not related to a specific measuring instrument)

WO 2011/148349

References

Limiting references

This place does not cover:

Illumination for examining the anterior chamber or the anterior chamber angle	<u>A61B 3/117</u>
Illumination for objective testing apparatus	<u>A61B 3/14</u>

Informative references

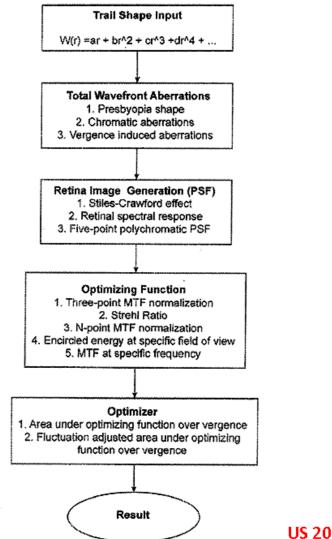

Goniolenses used for laser treatment	<u>A61F 9/009</u>
Illuminating means for optical instruments	<u>G02B 27/00</u>

{characterised by electronic signal processing, e.g. eye models}

Definition statement

This place covers:

Use of any type of eye model, e.g. to aid in measurement of visual function or checking correct prescription of corrective lens.

US 2012/249950

Determination of parameters of contact lenses or of intraocular lenses on the basis of ophthalmic measurements

Correlation of eye images taken at different times

{characterised by user input arrangements}

Definition statement

This place covers:

All types of user input/interface means, e.g. particular keyboard/switch layouts, control desks/panels, voice-controlled, light pen, touch screen, joysticks, cursors etc.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Adjusting devices, e.g. operated by control lever	<u>A61B 3/0075</u>
---	--------------------

A61B 3/005

{Constructional features of the display}

Definition statement

This place covers: Display construction, e.g. portable, supports for displays.

A61B 3/0058

{for multiple images}

Definition statement

This place covers:

Display of images obtained by all types of apparatus in <u>A61B 3/00</u>, combinations of images, e.g. sideby-side, superimposed, tiled etc., combination of images and/or other data, e.g. graphs, waveforms, alphanumeric data, questionnaires, patient reports etc.

A61B 3/0066

{with identification means for the apparatus}

Definition statement

This place covers:

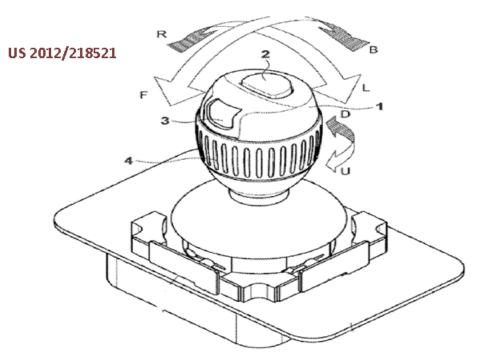

Identification of apparatus or component parts of the apparatus by any means, e.g. RFID, bar code, coded resistors, EPROM etc.

{provided with adjusting devices, e.g. operated by control lever (manipulators <u>B25J</u>)}

Definition statement

This place covers:

Control levers for ophthalmic apparatus

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Manipulators as such	<u>B25J</u>

A61B 3/0083

{provided with means for patient positioning}

Definition statement

This place covers:

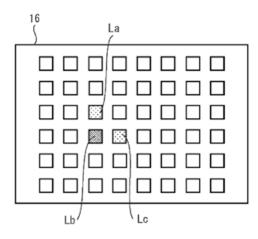

Means for positioning of a patient with respect to apparatus, e.g. head-rests, chin-rests, seats etc. Adjustable positioning, e.g. sliding elements or motor driven structures.

{Fixation targets for viewing direction}

Definition statement

This place covers:

Details or arrangements of fixation targets or lights.

US 2010/296056

The fixation light 16 includes a plurality of LEDs arranged in a lattice shape. By lighting one LED, the fixation light 16 can guide a sight line of the subject's eye E to a direction of the LED lighting.

Also to relax the accommodation power

A61B 3/022

{for testing contrast sensitivity}

Definition statement

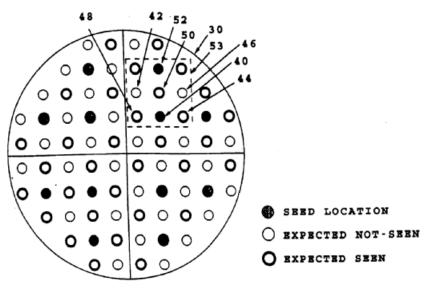

This place covers:

Examination or measurement of the contrast sensitivity of the eye.

for determining the visual field, e.g. perimeter types

Definition statement

This place covers: Determining the field of vision

US 5 050 983

A61B 3/032

Devices for presenting test symbols or characters, e.g. test chart projectors (<u>A61B 3/036</u> takes precedence)

References

Limiting references

This place does not cover:

For testing astigmatism A61B 3/036

A61B 3/04

Trial frames; Sets of lenses for use therewith (lenses per se G02C 7/02)

References

Informative references

Ophthalmic lenses per se	<u>G02C 7/02</u>
--------------------------	------------------

Objective types, i.e. instruments for examining the eyes independent of the patients' perceptions or reactions

Definition statement

This place covers:

Measurements on the eye without the patient's feedback.

Besides the below-listed fields, the following is included:

- detect the features (e.g., position, fitting) of a contact lens or an intraocular lens
- examining the eyelid
- evaluate a contrast agent on the eye surface
- fluorescence examination
- scanning laser ophthalmoscope
- · examination of light scattering

A61B 3/1005

{for measuring distances inside the eye, e.g. thickness of the cornea (<u>A61B 3/11</u> takes precedence)}

References

Limiting references

This place does not cover:

asuring interpupillary distance or diameter of pupils	A61B 3/11
---	-----------

A61B 3/101

{for examining the tear film}

Definition statement

This place covers:

Measurement of any quantity related to tear secretion or tear film production, e.g. volume, flow, or film thickness.

Synonyms and Keywords

In patent documents, the following words/expressions are often used with the meaning indicated:

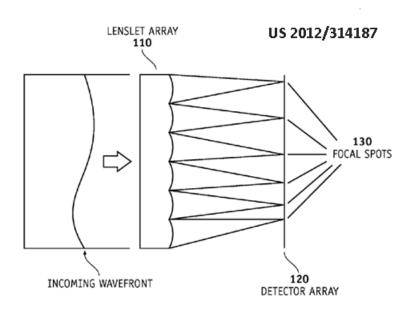

Examining	Measuring.

{for wavefront analysis}

Definition statement

This place covers:

Measuring optical aberrations of the eye or corneal topography with wavefront sensor.

Synonyms and Keywords

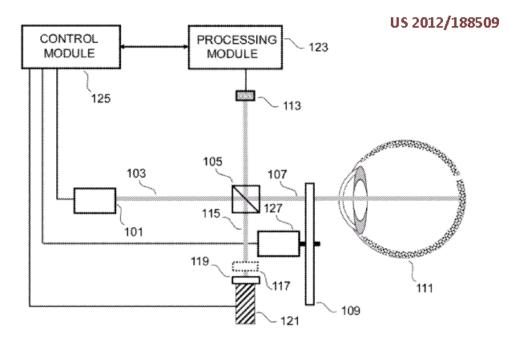

wavefront sensor, Hartmann sensor, shack sensor, lenslet array, microlens array

{for optical coherence tomography [OCT]}

Definition statement

This place covers:

By optical coherence tomography, also in combination and sharing optical components with scanning laser ophthalmoscopy.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Optical coherence tomography of body tissue in general	<u>A61B 5/0066</u>
Optical coherence tomography as such	<u>G01N 21/4795</u>

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

• "optical coherence tomography", "OCT", "OCDR", "optical coherence domain relectometry", "optical coherence imaging", "low coherence interferometry" and "partial coherence tomography"

A61B 3/1025

{for confocal scanning}

Definition statement

This place covers:

Scanning the eye wherein a detector receives only the reflected light focussed on a single point in the eye tissue, e.g. cornea or retina.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Confocal scanning of body tissue in general	<u>A61B 5/0068</u>

A61B 3/103

for determining refraction, e.g. refractometers, skiascopes

Computation of astigmatism based on input values	<u>A61B 3/0025</u>
Testing astigmatism	<u>A61B 3/036</u>

Special rules of classification

This field mostly relates to processing of ophthalmic data in order to estimate astigmatism.

A61B 3/107

for determining the shape or measuring the curvature of the cornea

Definition statement

This place covers:

Measurement of corneal topography.

E.g. by projecting a light pattern (moiré, placido rings) on the cornea

Examination of limbus

References

Informative references

Means for monitoring data relating to the user, e.g. head-tracking, eye-tracking	<u>G02B 27/00</u>
Man-machine interfaces	<u>G06F 3/01</u>
For photography	<u>G06F 3/013</u>

A61B 3/117

for examining the anterior chamber or the anterior chamber angle, e.g. gonioscopes

Definition statement

This place covers:

Examination of the anterior chamber: Space between the cornea and the iris

Examination of the posterior chamber: Iris, ciliary body, lens

References

Limiting references

This place does not cover:

Examination of the cornea	<u>A61B 3/107</u>

A61B 3/1176

{for determining lens opacity, e.g. cataract}

Definition statement

This place covers:

Any type of apparatus for determining, measuring or examining the opacity of the lens, e.g. due to cataract.

A61B 3/12

for looking at the eye fundus, e.g. ophthalmoscopes (<u>A61B 3/13</u> takes precedence)

References

Operation microscopes	<u>A61B 90/20</u>
Surgical microscopes	<u>G02B 21/0012</u>

Arrangements specially adapted for eye photography {(apparatus or arrangements for taking photographs per se <u>G03B</u>)}

Definition statement

This place covers:

Means for focussing an eye image detector:

Also:

- · Adaptive optics
- · Camera adapters
- Focussing features
- Eye spectrometry
- Evaluation of eye-detector distance

A61B 3/158

{of corneal reflection}

Definition statement

This place covers:

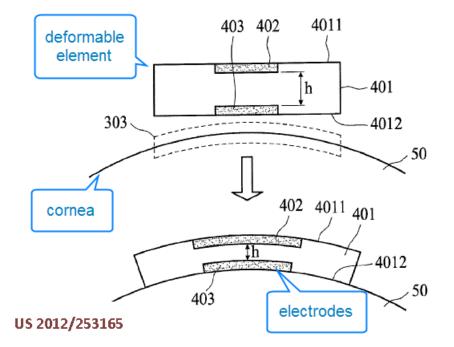

Means for stopping, e.g. polarised light reflected from the cornea to enhance detection of light reflected from the retina, e.g. in eye fundus examinations.

A61B 3/16

for measuring intraocular pressure, e.g. tonometers

Definition statement

This place covers: Detect intraocular pressure.

E.g., using a deformable element in contact with the cornea

Also:

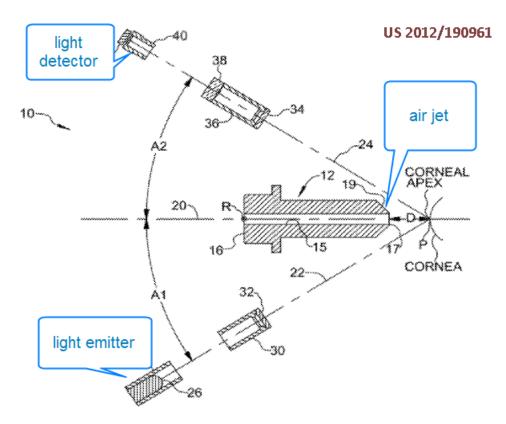

- using deformable item on the eye surface
- causing eye deformation using ultrasound waves
- using implanted sensor

{Non-contacting tonometers}

Definition statement

This place covers:

Detect intraocular pressure by deforming the eye surface with a gas jet a measuring the deformation of the eye surface

A61B 3/18

Arrangement of plural eye-testing or -examining apparatus

Definition statement

This place covers:

Combinations of eye-testing apparatus in a single workstation, e.g. at a test station.

A61B 3/185

{characterised by modular construction}

Definition statement

This place covers:

Apparatus may be modified for different applications by exchanging component parts.

{Features or image-related aspects of imaging apparatus classified in A61B 5/00, e.g. for MRI, optical tomography or impedance tomography apparatus; arrangements of imaging apparatus in a room (image data processing or generation $\underline{G06T}$)}

Special rules of classification

Documents in this subgroup should be also be classified according to type of imaging apparatus in other subgroups of A61B 5/00.

A61B 5/0036

{including treatment, e.g., using an implantable medical device, ablating, ventilating}

Definition statement

This place covers:

Imaging apparatus, for example employing electron or nuclear magnetic resonance, including surgical and therapeutic techniques to facilitate healing.

Implantable medical device may include pacemakers. Ablating includes cutting, eroding, melting, evaporating, or vaporizing. Ventilating includes oxygenating, aerating.

A61B 5/0051

{by applying vibrations}

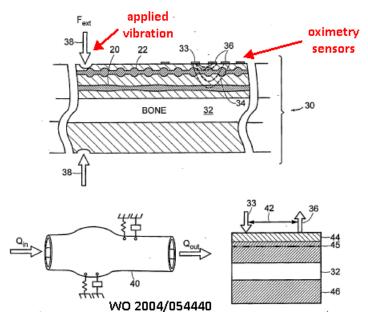

Definition statement

This place covers:

1) Vibration stimulator, e.g. for detecting pain threshold

2) Apply stimulation while carrying out measurements, e.g. oximetry:

References

Limiting references

This place does not cover:

Applying ultrasound vibrations	<u>A61B 8/00</u>

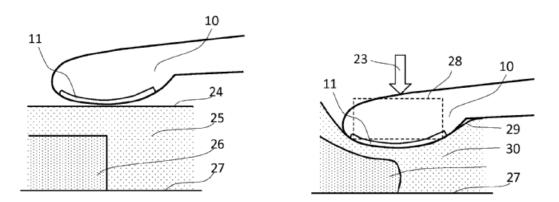

A61B 5/0053

{by applying pressure, e.g. compression, indentation, palpation, grasping, gauging}

Definition statement

This place covers:

Applying compression during a measurement:

US 2011/054357

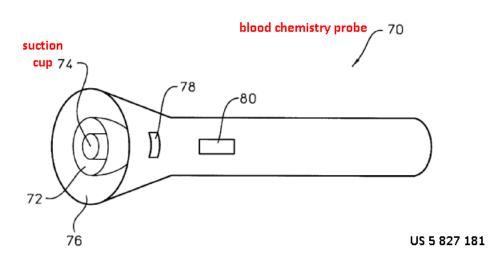

Holding skin for skin gauges, palpation, indentation

{by applying suction}

Definition statement

This place covers:

Applying suction or vacuum at the measurement area during the measurement, e.g. to increase blood pressure:

References

Limiting references

This place does not cover:

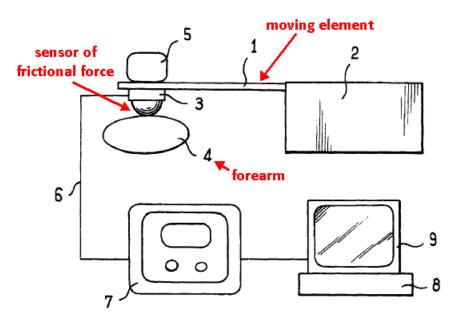

Apply suction to enhance body fluid extraction	<u>A61B 5/150099</u>
Apply suction to attach sensor to the body surface	<u>A61B 5/6834</u>

{by applying motion other than vibrations, e.g. rolling, rubbing, applying a torque, tribometry}

Definition statement

This place covers:

Applying torque, friction etc. to a body part during the measurement of an effect of this force

US 6 309 363

A61B 5/0059

{using light, e.g. diagnosis by transillumination, diascopy, fluorescence (A61B 5/0093, A61B 5/1455, A61B 5/02416 and A61B 5/0261 take precedence)}

Definition statement

This place covers:

Testing or evaluating the body, parts of the body or body tissues by applying light and measuring the change in light characteristics caused by the interaction of the light with the body or tissue.

References

Limiting references

This place does not cover:

Optoacoustic or acoustooptic imaging	<u>A61B 5/0093</u>

Transmission of temperature signals	<u>A61B 5/0008</u>
-------------------------------------	--------------------

Detecting, measuring or recording pulse, heart rate, blood pressure or blood flow; Combined pulse/heart-rate/blood pressure determination; Evaluating a cardiovascular condition not otherwise provided for, e.g. using combinations of techniques provided for in this group with electrocardiography or electroauscultation; Heart catheters for measuring blood pressure

Definition statement

This place covers:

Apparatus for detecting, measuring or recording physiological parameters related to diagnosis of the cardiovascular system. It includes apparatus where calculation of health indices, e.g. an arterial index, are made or apparatus for monitoring trends in the patient's condition by analysis of the physiological data, e.g. ambulatory blood pressure monitoring.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Measuring a physiological parameter of a patient undergoing therapy, e.g. for controlling the administration of therapy	<u>A61M 2230/00</u>
Controlling electrotherapy using a measured physiological parameter	<u>A61N 1/365</u>
Electrotherapy combined with monitoring a physiological parameter	<u>A61N 1/3702</u>
Measuring a physiological parameter of a user of sports apparatus	<u>A63B 2230/00</u>

Special rules of classification

Multiple subgroups may be allocated if the particular physiological parameter is essential for the determination of a diagnosis or calculation of a health index.

A61B 5/02035

{Determining blood viscosity}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Investigating flow properties of materials, e.g. viscosity	<u>G01N 11/00</u>

A61B 5/0205

Simultaneously evaluating both cardiovascular conditions and different types of body conditions, e.g. heart and respiratory condition

Definition statement

This place covers:

Apparatus for detecting, measuring or recording multiple physiological parameters where at least one parameter is a cardiovascular parameter. Combinations with any other physiological parameters, not

only a respiratory condition, are allowed, e.g. measurement of heart rate, movement activity and blood glucose concentration. Multiparameter vital signs monitoring.

Special rules of classification

Indexing Codes added for specific parameters to show the combination of physiological parameters measured, e.g. <u>A61B 5/024</u>, <u>A61B 5/0816</u> and <u>A61B 5/14532</u>.

A61B 5/02055

{Simultaneously evaluating both cardiovascular condition and temperature}

Definition statement

This place covers:

Simultaneously evaluating both cardiovascular condition and body temperature. Multiple vital signs monitoring where at least one cardiovascular parameter is measured with body temperature, e.g. heart rate and temperature.

References

Limiting references

This place does not cover:

Remote monitoring of patients by using telemetry of temperature signals	<u>A61B 5/0008</u>
Details of apparatus calibration for compensation or correction of the measured physiological value using ambient temperature	A61B 2560/0252
Clinical thermometers	<u>G01K 5/00</u>
Special purpose thermometers	<u>G01K 13/00</u>

Informative references

Attention is drawn to the following places, which may be of interest for search:

Measuring temperature of a patient undergoing therapy, e.g. for controlling administration of therapy	<u>A61M 2230/50</u>
Controlling electrotherapy using body or blood temperature	<u>A61N 1/3655</u>
Measuring temperature of a user of sports apparatus	<u>A63B 2230/50</u>

A61B 5/021

Measuring pressure in heart or blood vessels (A61B 5/0205 takes precedence)

Definition statement

This place covers:

Apparatus for detecting, measuring or recording blood pressure, diastolic pressure, systolic pressure, arterial pressure, venous pressure. Includes measuring pressure in specific blood vessels, e.g. aortic pressure.

References

Limiting references

This place does not cover:

Simultaneously evaluating both cardiovascular conditions and different types of body conditions	<u>A61B 5/0205</u>
Detecting, measuring or recording fluid pressure within the body other than blood pressure	<u>A61B 5/03</u>
Measuring fluid pressure by mechanical pressure-sensitive elements in general	<u>G01L 7/00</u>
Measuring fluid pressure by electric or magnetic pressure-sensitive elements in general	<u>G01L 9/00</u>

Informative references

Attention is drawn to the following places, which may be of interest for search:

Means for maintaining contact with the body by monitoring or controlling sensor contact pressure	<u>A61B 5/6843</u>
Details of pressure sensors specially adapted for sensing pressure in-vivo	<u>A61B 2562/00</u>
Measuring blood pressure during the administration of therapy	<u>A61M 2230/04</u> and <u>A61M 2230/30</u>
Controlling electrotherapy by using blood pressure	<u>A61N 1/36564</u>
Measuring blood pressure of a user of sports apparatus	<u>A63B 2230/04</u> and <u>A63B 2230/30</u>

Special rules of classification

IPC precedence does not apply in the case where the blood pressure in combination with another physiological parameter is essential for the invention, e.g. in calculation of a particular arterial index.

A61B 5/0215

by means inserted into the body (catheters A61M 25/00)

Definition statement

This place covers:

All types of apparatus for detecting, measuring or recording blood pressure invasively including catheters, needle probes, guidewires and implanted devices. Blood pressure may be measured in blood vessels or in the heart itself.

References

Informative references

Measuring pressure in other body cavities	<u>A61B 5/036</u>
Ŭ	<u>A61B 5/6847</u> - <u>A61B 5/6866</u>

Catheters, e.g. for introducing media or drainage	<u>A61M 25/00</u>

{by optical transmission}

Definition statement

This place covers:

Apparatus for detecting, measuring or recording blood pressure in a blood vessel or the heart comprising optical means for transmitting the pressure change, e.g. deflection of a pressure sensitive membrane is detected optically.

References

Limiting references

This place does not cover:

Optical transmission of a pressure signal from the patient to a remote site A61B 5/0017

Informative references

Attention is drawn to the following places, which may be of interest for search:

Transmitting or indicating the displacement of pressure sensitive flexible	<u>G01L 9/0076</u>
diaphragms using photoelectric means	

A61B 5/02156

{Calibration means}

Definition statement

This place covers:

Methods or apparatus for calibrating the pressure sensor repsonse. May include correction or compensation of the measured value, e.g. due to drift.

References

Informative references

Details of apparatus for calibration, e.g. calibration protocols	A61B 2560/0223
Sensors provided with means for identification combined with means for recording calibration data, e.g. on memory chip	<u>A61B 2562/085</u>
Testing or calibrating of apparatus for measuring fluid pressure	<u>G01L 27/00</u>

{provided with two or more sensor elements}

Definition statement

This place covers:

Apparatus provided with two or more pressure sensors for measuring the blood pressure in the body, e.g. two pressure transducers mounted on a catheter.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Details of pressure sensors, e.g. in a linear arrangement	A61B 2562/043
---	---------------

A61B 5/022

by applying pressure to close blood vessels, e.g. against the skin; Ophthalmodynamometers

Definition statement

This place covers:

Apparatus for detecting, measuring or recording blood pressure where the blood vessel is fully occluded during part of the measurement cycle and then released to allow blood flow.

References

Limiting references

This place does not cover:

Partial compression of blood vessel to allow blood pressure	A61B 5/021
measurement

A61B 5/0235

Valves specially adapted therefor

Definition statement

This place covers:

Details of valves specially adapted for use in blood pressure measuring apparatus, e.g. valves for releasing air from an inflatable cuff. Includes valves used in any part of the apparatus..

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Valves for medical use	<u>A61M 39/22</u>

Special rules of classification

This subgroup is not restricted to apparatus where the blood vessel is occluded.

A61B 5/024

Detecting, measuring or recording pulse rate or heart rate (<u>A61B 5/0205</u>, <u>A61B 5/021</u> take precedence)

Definition statement

This place covers:

Apparatus for detecting, measuring or recording pulse rate or heart rate, e.g. given in beats per minute.

References

Limiting references

This place does not cover:

Evaluating a cardiovascular condition not otherwise provided for, e.g. pulse waveform shape analysis	<u>A61B 5/02</u>
Simultaneously evaluating both cardiovascular conditions and different types of body conditions	<u>A61B 5/0205</u>
Measuring pressure in heart or blood vessels	<u>A61B 5/021</u>
Ballistocardiography, detecting chest motion due to heart beat	<u>A61B 5/1102</u>

Measuring pressure in heart or blood vessels	<u>A61B 8/02</u>

Informative references

Attention is drawn to the following places, which may be of interest for search:

Measuring a physiological parameter to provide biofeedback to patient, e.g. measuring heart rate to allow patient to control the heart rate	<u>A61B 5/486</u>
Measuring heart rate of a patient during administration of therapy	A61M 2230/06
Measuring heart rate of a user of sports apparatus	A63B 2230/06

A61B 5/02416

{using photoplethysmograph signals, e.g. generated by infrared radiation (<u>A61B 5/14552</u> takes precedence)}

Definition statement

This place covers:

Apparatus for detecting, measuring or recording pulse rate or heart rate using an optical sensor for detecting photoplethysmograph signals.

References

Limiting references

This place does not cover:

Measuring blood flow using plethysmography	<u>A61B 5/0295</u>
Using optical sensors for measuring blood gases, e.g. details of photometrical oximeters	<u>A61B 5/14552</u>

A61B 5/02427

{Details of sensor}

Definition statement

This place covers:

Details of optical sensors for detecting photoplethysmograph signals. Includes constructional details of sensors, arrangements of sensors in housings or probes.

References

Informative references

Details of optical sensors specially adapted for measuring blood gases	<u>A61B 5/14552</u>
Details of optical sensors specially adapted for in-vivo measurements	A61B 2562/0233

{with portable devices, e.g. worn by the patient}

Definition statement

This place covers:

All types of portable devices for detecting, measuring or recording pulse or heart rate. Heart rate devices may be worn on any part of the body or be incorporated in a portable device providing a non-medical function, e.g. a music player.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Arrangements of detecting, measuring or recording means where the sensors are mounted on worn items	<u>A61B 5/6802</u>
Arrangements of detecting, measuring or recording means where the sensors are mounted on a non-medical device	<u>A61B 5/6887</u>
Constructional details of apparatus, low-profile patch shaped housings	A61B 2560/04
Apparatus with built-in sensors	A61B 2560/0462

A61B 5/02444

{Details of sensor (A61B 5/02427 takes precedence)}

Definition statement

This place covers:

Details of sensors for measuring heart or pulse rate not covered by <u>A61B 5/02416</u> or <u>A61B 5/0245</u>. For example, pressure sensors, strain gauges or accelerometers for measuring the tissue deformation due to the pulse wave. Inlcudes sensor construction and arrangements of sensors in housings or probes.

References

Limiting references

This place does not cover:

Details of optical sensors for measuring heart rate	<u>A61B 5/02427</u>
Details of ECG sensors for measuring heart rate	A61B 5/0245

Invasive instruments, e.g. catheters or biopsy needles, specially adapted for tracking, guiding or visualization by NMR	<u>G01R 33/285</u>
Using nuclear magnetic resonance [NMR]	<u>G01R 33/44</u>

With selection of signals or spectra from particular regions of the volume, e.g. in vivo spectroscopy	<u>G01R 33/483</u>
Signal processing systems, e.g. using pulse sequences	<u>G01R 33/54</u>
Image enhancement or correction, e.g. subtraction or averaging techniques, e.g. improvement of signal-to-noise ratio and resolution	<u>G01R 33/56</u>

Special rules of classification

There is an overlap between the scope of <u>G01R 33/20</u> (or its relevant subgroup) and <u>A61B 5/055</u> in the sense that, depending on the disclosure of a given document, the document may have to be classified in <u>G01R 33/20</u> (or its relevant subgroup) only, in <u>A61B 5/055</u> only or in both places.

For instance:

- if the invention information of a document to be classified is primarily directed to the MR process as such (e.g. a novel pulse sequence which, according to the document, facilitates the diagnosis of a disease on the basis of the resulting MR images wherein the document merely mentions the diagnosis but does not specifically disclose its implementation in detail), the document should be classified in <u>G01R 33/20</u> (or its relevant subgroup) only and the additional information related to the diagnosis may be classified using the appropriate Indexing Code corresponding to <u>A61B 5/055</u>.
- if the invention information of the document is primarily directed to the diagnosis as such (e.g. a novel way of processing MRI data in order to enable the diagnosis of a disease wherein the MRI data was acquired using a commonly known standard MRI technique), the document should be classified in <u>A61B 5/055</u> only.
- documents where the focus lies in diagnostic features as well as in technical details of the MR apparatus or details of the MR process should be classified in both <u>A61B 5/055</u> and <u>G01R 33/20</u>.

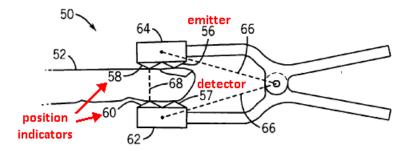

A61B 5/06

Devices, other than using radiation, for detecting or locating foreign bodies (for removing same A61B 17/50); determining position of probes within or on the body of the patient}

Definition statement

This place covers:

Position sensors on a probe to detect relative positions of different components

US 2008/081973

Sensor 50 is configured to provide position data for the emitter 56 and detector 57.

Sensor 50 comprises a sensor body that includes the emitter 56, detector 57, and one or more position indicators 58 and 60

References

Limiting references

This place does not cover:

Tracking foreign bodies using x-ray	<u>A61B 6/12</u>
Tracking foreign bodies using ultrasound	<u>A61B 8/0833</u>
Instruments for removing foreign bodies	<u>A61B 17/50</u>

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Foreign body	1) Sensing probe inserted in the human or animal body, e.g.
	catheter, endoscope, implant 2) External sensing probe

A61B 5/061

{Determining position of a probe within the body employing means separate from the probe, e.g. sensing internal probe position employing impedance electrodes on the surface of the body (<u>A61B 1/00158</u> takes precedence)}

Definition statement

This place covers:

External tracking device detecting position of:

1) Invasive probes comprising position indicating element

2) Markers placed on the surface of the body

References

Evaluation of respiratory rate in general	<u>A61B 5/0816</u>
Measuring movement due to respiration	<u>A61B 5/113</u>

{by impedance pneumography}

Definition statement

This place covers:

Detection of electrical impedance of respiratory organs

IP (impedance pneumography) circuit 27 25 generates a current that is modulated at a high frequency (typically 50-100 kHz). The current passes through electrode LL 24. It then propagates through the patient's chest, as indicated by the arrow 29, where a respiration-induced capacitance change modulates it according to the RR.

Electrode UR 20 detects the resultant analog signal, which is then processed within the IP circuit to determine an analog IP waveform 30 featuring a low-frequency series of pulses corresponding to RR.

The analog filters in the IP circuit 27 are chosen to filter out high-frequency components that contribute to the ECG QRS complex.

Measurements of angles

Angle measuring device 6 comprising light source 7 and light detector 8

Processing module is enabled to calculate, from the ratio between the power entered into the light source 7 and the power received by the light detector 8, an angle between the first and second member

A61B 5/145

Measuring characteristics of blood in vivo, e.g. gas concentration, pH value; {Measuring characteristics of body fluids or tissues, e.g. interstitial fluid, cerebral tissue} (measuring of blood pressure or blood flow <u>A61B 5/02</u>; nonradiation detecting or locating of foreign bodies in blood <u>A61B 5/06</u>)

Definition statement

This place covers:

Apparatus for detecting, measuring or recording characteristics of blood, body fluids or tissues in-vivo. Determining chemical characteristics, e.g. measuring the concentration of an analyte. Determining constituents of blood or body fluids, e.g. haematocrit. The measurement is performed on the body, i.e. in-vivo, or immediately after a sample of body fluid has been obtained, e.g. by lancet.

References

Limiting references

This place does not cover:

Detecting, measuring or recording for diagnosis using light, e.g. detecting cancer, fatty tissue	<u>A61B 5/0059</u>
Measuring blood pressure or blood flow	<u>A61B 5/02</u>

A61B 5/14532

{for measuring glucose, e.g. by tissue impedance measurement}

Definition statement

This place covers:

Apparatus for detecting, measuring or recording glucose. Apparatus for continual monitoring of glucose with analysis of glucose data to determine trends, e.g. to optimise insulin administration. Apparatus for measuring glucose in combination with an insulin pump. Apparatus for glucose measurement in-vivo or combination with fluid or blood sampling where the measurement is made immediately after sampling the fluid, e.g. by lancet.

Relationships with other classification places

<u>A61B 5/14532</u> is given for glucose, and the corresponding subgroup for the measurement technique, e.g. <u>A61B 5/14532</u> and <u>A61B 5/1486</u>. Classification of glucose measurement in combination with blood or fluid sampling is covered by <u>A61B 5/15-A61B 5/157</u> (apparatus for blood sampling). Test strips with no further disclosure of interaction with the patient is covered by <u>G01N</u>.

Measuring contraction of body parts	<u>A61B 5/1107</u>
Measuring constituents of body fluids other than blood	<u>A61B 5/14507</u>
Devices for taking urine samples	<u>A61B 10/007</u>

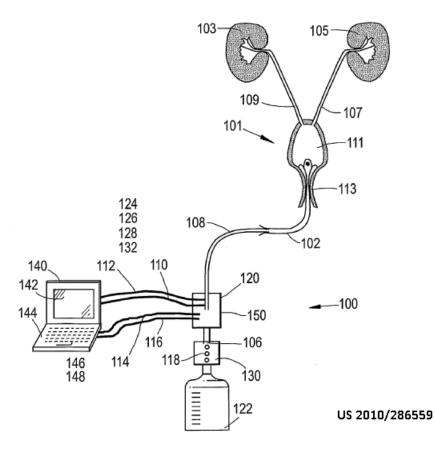

{Assessing renal or kidney functions}

Definition statement

This place covers:

Evaluate renal function, e.g. detect renal failure

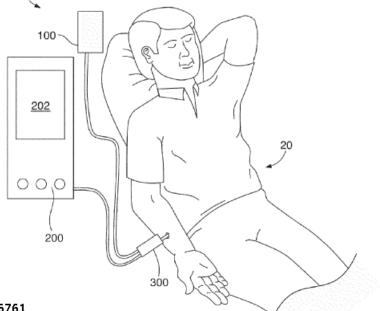

1) By urine analysis:

detecting a change in a urinary parameter indicative of a kidney malfunction, e.g. pH, a sodium level, an oxygen level, a potassium level.

Definition statement

2) By blood analysis:

US 2009/285761

Fluorescent molecules are introduced into the blood stream.

Over a period of time, a measurement of the intensities of the reporter and marker fluorescent molecules is taken.

A ratio is calculated to determine a glomerular filtration rate and therefore the health of the subject's kidney.

Measuring instruments for dentigraphy A61C 19/04		
	Measuring instruments for dentigraphy	<u>A61C 19/04</u>

A61B 5/24

Detecting, measuring or recording bioelectric or biomagnetic signals of the body or parts thereof

Definition statement

This place covers:

Apparatus for measuring, detecting or recording bioelectric or biomagnetic signals generated by the body or parts thereof. The measurement does not require application of an electric current or voltage nor application of an electromagnetic or magnetic field. Apparatus for ambulatory or long-term monitoring of bioelectric signals. Apparatus for measuring combined with analysis of bioelectric signals for diagnosis.

Audiometry	<u>A61B 5/12</u>
Evaluating the central nervous system	<u>A61B 5/4058</u>

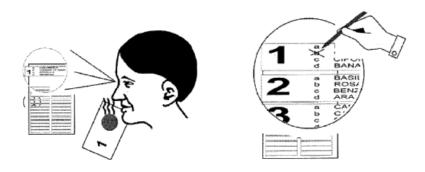

A61B 5/4011

{Evaluating olfaction, i.e. sense of smell}

Definition statement

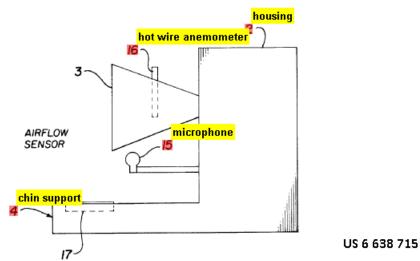

This place covers:

1) Manual odour test using odour samples

EP 2 174 585

2) Automatic test device

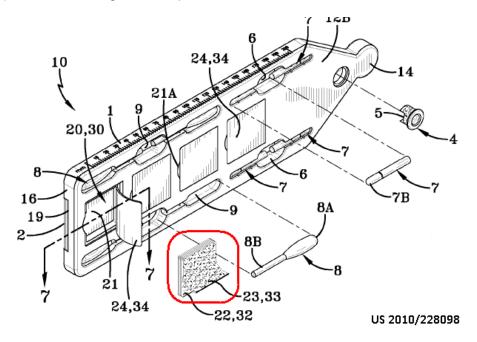

- Dispensing a controlled amount of volatile fluid
- Determining if the patient has sensed the volatile fluid
- Dispensing an increased quantity of volatile fluid if the patient has not sensed the volatile fluid or a reduced quantity of volatile fluid if the patient has sensed the volatile fluid.

{Evaluating sense of taste}

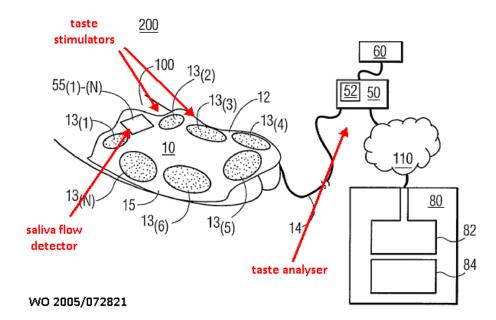

Definition statement

This place covers:

1) Manual test using taste samples;

Each strip 22, 32 is comprised of a thin layer 23, 33 of material with a specific taste.

2) Automatic taste sensor

{Evaluating sense of balance}

Definition statement

This place covers:

Evaluate forces applied by the patient to maintain balance, possibly while perturbing her balance

US 6 389 883

A61B 5/4029

{for evaluating the peripheral nervous systems (<u>A61B 5/24</u> takes precedence)}

Determining level of anaesthesia	<u>A61B 5/4821</u>
Determining pain perception	<u>A61B 5/4824</u>

{Diagnosing or monitoring movement diseases, e.g. Parkinson, Huntington or Tourette}

Definition statement

This place covers:

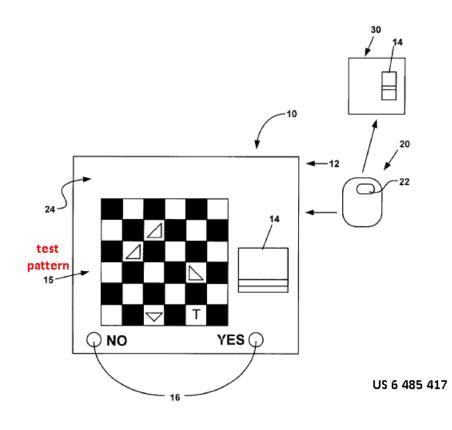

{Diagnosing of monitoring cognitive diseases, e.g. Alzheimer, prion diseases or dementia}

Definition statement

This place covers:

All types of diagnostic apparatus and methods for diagnosing or monitoring cognitive diseases. Includes objective type measurement apparatus, e.g. measuring a physical characteristic of the brain tissue and subjective type apparatus, e.g. for applying cognitive tests to the patient.

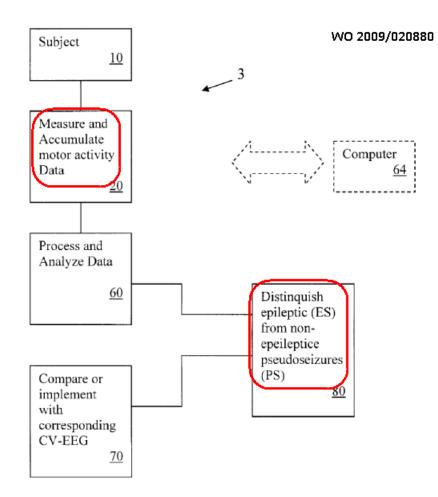

{Diagnosing or monitoring seizure diseases, e.g. epilepsy}

Definition statement

This place covers:

Assess seizures based on detected movement patterns, heart rate variability, EEG etc.

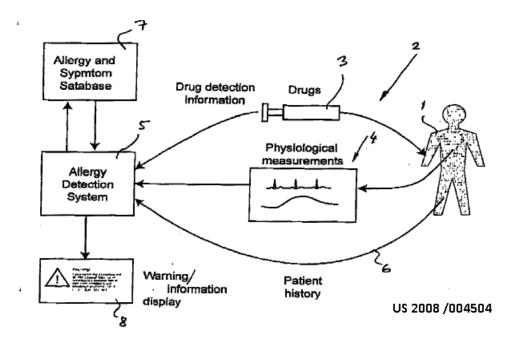

{Detecting or monitoring allergy or intolerance reactions to an allergenic agent or substance}

Definition statement

This place covers:

Evaluation of allergies or intolerances, with or without sensors of physiological quantities:

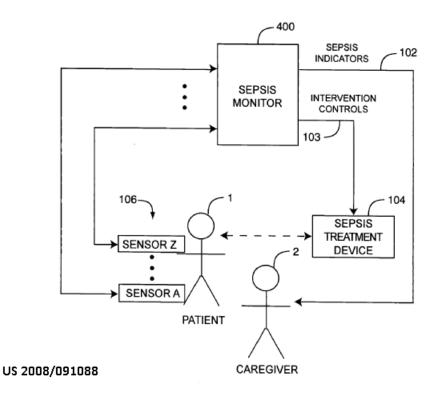

{Detecting or monitoring sepsis}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 5/412

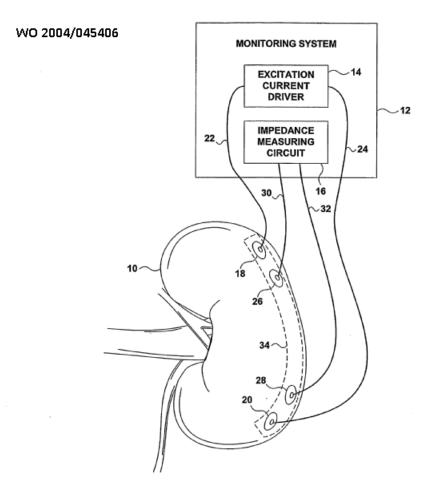

{Monitoring transplanted tissue or organ, e.g. for possible rejection reactions after a transplant}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 5/413

body tracts, e.g. by usingcatheters	

{Evaluating swallowing}

Definition statement

This place covers:

Evaluating swallow actions

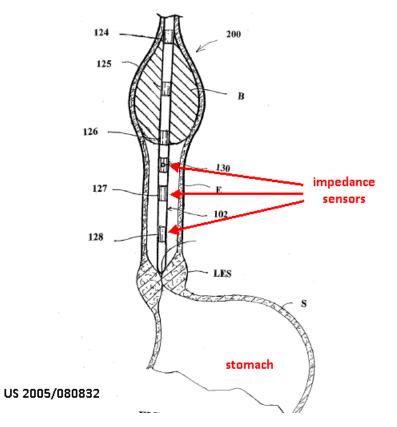

{Diagnosing or evaluating reflux}

Definition statement

This place covers:

Backflow detection from stomach to oesophagus, e.g. by impedance measurement with a balloon catheter:

A61B 5/4216

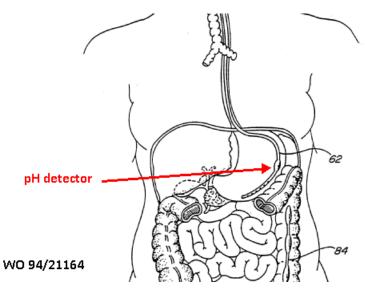

{Diagnosing or evaluating gastrointestinal ulcers}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 5/4216:

by pH measurement in the gastrointestinal system

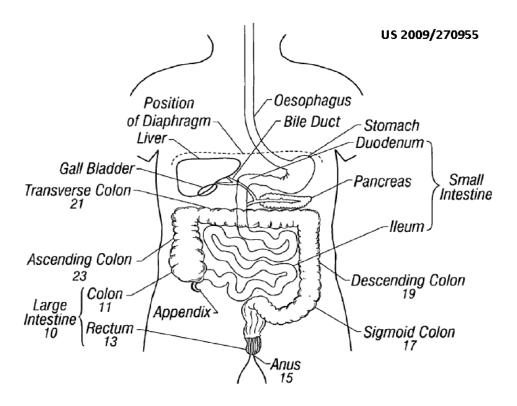

A61B 5/4222

{Evaluating particular parts, e.g. particular organs}

Definition statement

This place covers:

Evaluating oesophagus, stomach, liver, pancreas, intestines, endocrine glands

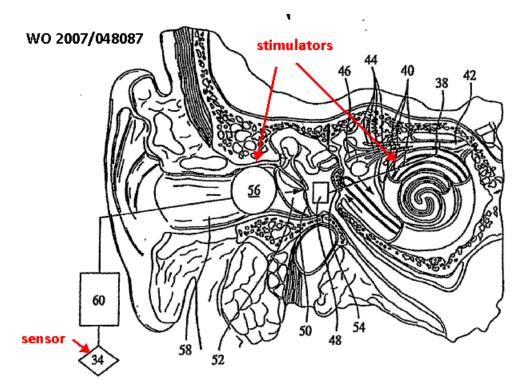

{endocrine glands, i.e. thyroid, adrenals, hypothalamic, pituitary}

Definition statement

This place covers:

Determining the activity of endocrine glands, e.g. determining the response of the hypothalamus to stimulation.

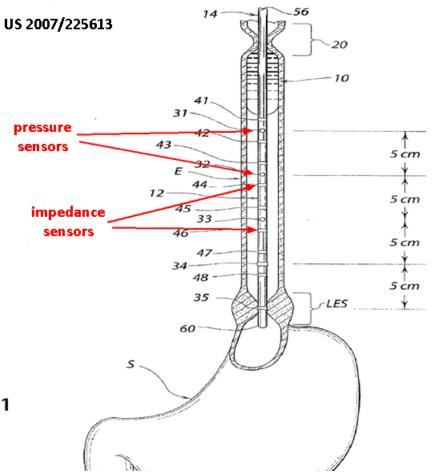

{oesophagus}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 5/4233

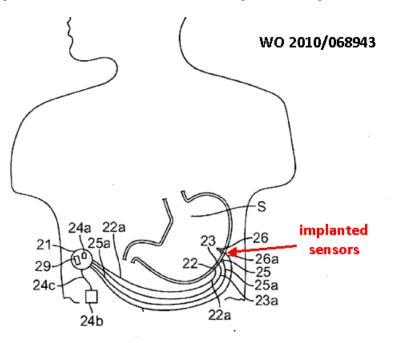

5.1

{stomach}

Definition statement

This place covers:

Evaluating the function or state of the stomach, e.g. determining the amount of food or drink ingested.

A61B 5/4244

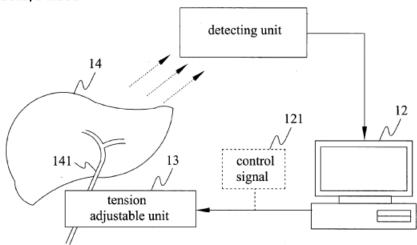

{liver}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 5/4244

US 2009/043251

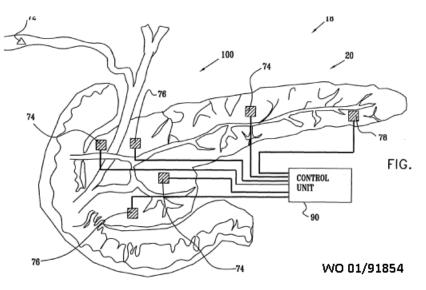

{pancreas}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 5/425

For example, electropancreatography:

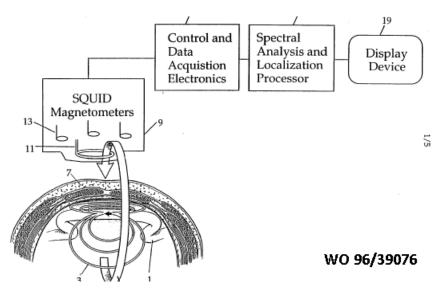

A61B 5/4255

{Intestines, colon or appendix}

Definition statement

This place covers:

Evaluating the function or state of the intestines, colon or appendix, for example, identification of intestinal ischemia

{Evaluating exocrine secretion production (<u>A61B 3/101</u> takes precedence)}

Definition statement

This place covers:

Sweat, sebum, saliva, gastrointestinal secretions, mammary secretions, vaginal secretions

References

Limiting references

This place does not cover:

Tear secretion	<u>A61B 3/101</u>

Determining colour for diagnostic purposes	<u>A61B 5/1032</u>
Colour measurement in general	<u>G01J 3/46</u>

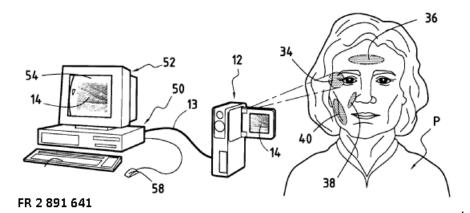

A61B 5/442

{Evaluating skin mechanical properties, e.g. elasticity, hardness, texture, wrinkle assessment}

Definition statement

This place covers:

Determining skin hardness, elasticity, tenderness, stiffness, pliability, laxity, mobility

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Measuring roughness of surfaces in general	<u>G01B 11/30</u>

A61B 5/443

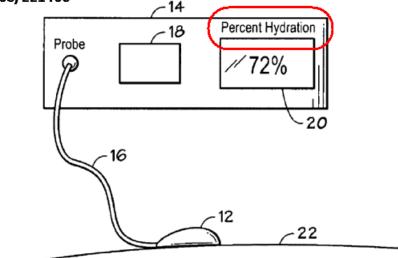

{Evaluating skin constituents, e.g. elastin, melanin, water}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 5/443

US 2008/221406

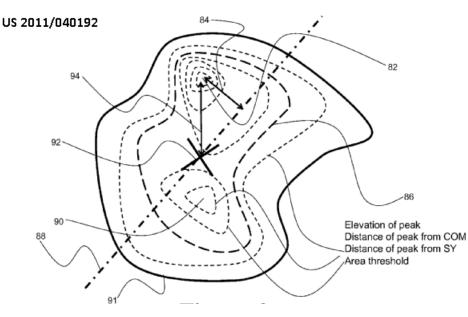

{Evaluating skin marks, e.g. mole, nevi, tumour, scar}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 5/444

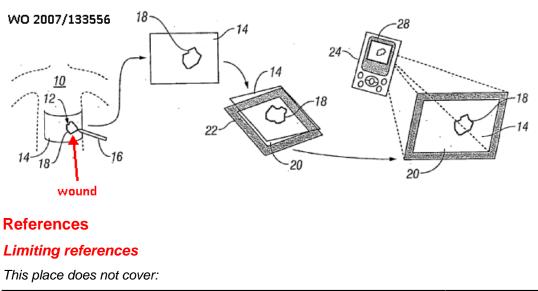

A61B 5/445

{Evaluating skin irritation or skin trauma, e.g. rash, eczema, wound, bed sore}

Definition statement

This place covers:

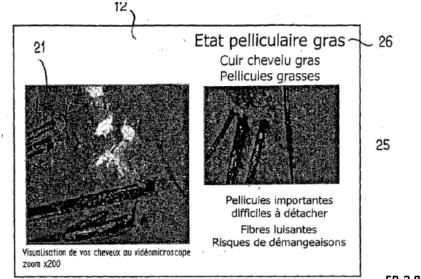

Measuring contraction of wounds	<u>A61B 5/1109</u>
---------------------------------	--------------------

{Scalp evaluation or scalp disorder diagnosis, e.g. dandruff}

Definition statement

This place covers: Evaluate scalp conditions:

FR 2 842 322

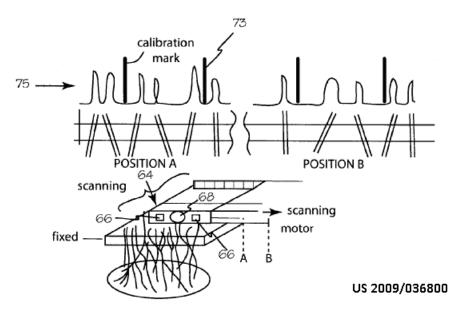

A61B 5/448

{Hair evaluation, e.g. for hair disorder diagnosis}

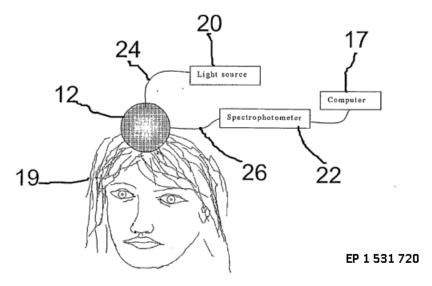

Definition statement

This place covers:

All types of apparatus or methods for evaluating the hair and disorders of the hair or hair growth invivo. For example, evaluating hair density:

Illustrative example, evaluating hair colour:

Detecting tooth mobility	<u>A61B 5/1111</u>

A61B 5/4561

{Evaluating static posture, e.g. undesirable back curvature (<u>A61B 5/1116</u> takes precedence)}

Definition statement

This place covers:

Determining a static posture of the body,e.g. whether a person is standing, sitting or lying. Includes also determination of spinal posture due to curvature or inclination

References

Limiting references

This place does not cover:

Measuring movement of the entire body or parts thereof for determining	<u>A61B 5/1116</u>
posture transitions	

A61B 5/48

{Other medical applications}

Definition statement

This place covers:

Apparatus and methods for measuring, detecting, recording or evaluating medical applications condtions not otherwise provided for.

Relationships with other classification places

This group is the residual group of <u>A61B 5/00</u>.

{Speech analysis specially adapted for diagnostic purposes}

Definition statement

This place covers:

Speech analysis for diagnostic purposes, e.g. evaluating speech disorders, evaluating speech for determining a subject's psychological state.

References

Limiting references

This place does not cover:

Speech analysis for identification of individuals	A61B 5/117 and

A61B 5/4815

{Sleep quality}

Special rules of classification

Determining sleep quality may comprise sleep detection as in <u>A61B 5/4809</u> or detecting sleep stages as in <u>A61B 5/4812</u>. In this case also <u>A61B 5/4809</u> and/or <u>A61B 5/4812</u> should be given.

{Sleep apnoea}

Definition statement

This place covers:

Monitoring or investigating sleep apnoe, e.g. multiparameter monitoring or polysomnography. Also for SIDS.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

	SIDS	sudden infant death syndrome.
--	------	-------------------------------

A61B 5/4821

{Determining level or depth of anaesthesia (A61B 5/1106 takes precedence)}

Definition statement

This place covers:

Determining/detecting/monitoring the level of anaesthesia by measuring a physiological parameter, e.g. EEG, EMG, etc.

References

Limiting references

This place does not cover:

Measuring movement of the entire body or parts thereof to asses neuromuscular blockade	<u>A61B 5/1106</u>
Electric apparatus for detecting reflex action	<u>A61B 9/005</u>
Introducing anaesthetics	<u>A61M</u>

A61B 5/4824

{Touch or pain perception evaluation (A61B 5/4821 takes precedence)}

Definition statement

This place covers:

Testing/indicating/recording/assessing level of pain for all parts of the body. Includes all types of apparatus, e.g. charts, expert systems, questionnaires etc.

References

Limiting references

Determining level or depth of anaesthesia	<u>A61B 5/4821</u>
---	--------------------

Monitoring the effects of medication	<u>A61B 5/4848</u>
--------------------------------------	--------------------

A61B 5/4848

{Monitoring or testing the effects of treatment, e.g. of medication}

Definition statement

This place covers:

Testing the efficacy or side effects of therapeutic medication.

References

Limiting references

Monitoring or testing the effects of anaesthetics	<u>A61B 5/4821</u>
---	--------------------

{Prosthesis assessment or monitoring}

Definition statement

This place covers:

Assessment or monitoring based on detecting, measuring or recording of or related to the prosthesis, e.g. measuring motion or position of prosthesis or measurement of physiological parameters or signals, such as myoelectric signals. The detecting, measuring or recording means may or may not be located on or in the prosthesis. The measurement, detection or recording may for example be used as an input signal useful for the control of prosthesis.

Relationships with other classification places

The prosthesis assessment or monitoring may produce an input signal useful for the control of prosthetics found in <u>A61F 2/482</u>, <u>A61F 2/70</u> or <u>A61F 2/72</u>.

References

A61B 5/486

{Bio-feedback (A61B 5/375 takes precedence)}

Definition statement

This place covers:

Providing a feedback signal to the subject of a physiological parameter measured from the subject for the purpose of informing the subject to maintain or modify his/her behaviour such that the measured parameter stays within a certain range, e.g. the subject maintains a certain breathing rate.

References

Limiting references

This place does not cover:

Electroencephalography using bioleeuback Aorb 3/375	Electroencephalography using biofeedback	<u>A61B 5/375</u>
---	--	-------------------

A61B 5/4866

{Evaluating metabolism (A61B 5/083 takes precedence)}

Definition statement

This place covers:

Apparatus and methods for evaluating the metabolism of the body not involving breath test. Includes measuring basal metabolic rate, determining calorific or energy expenditure from physiological parameters, e.g. heart rate or activity, determining level of radioisotope excretion. Also includes evaluating metabolic syndrome.

References

Limiting references

Measuring rate of metabolism by using breath test	<u>A61B 5/083</u> .
---	---------------------

Special rules of classification

When evaluation is based on measuring movement, <u>A61B 5/1118</u> should additionally be given.

A61B 5/4869

{Determining body composition}

Definition statement

This place covers:

Determination of tissue type or evaluating tissue characteristics not covered by other subgroups.

Evaluating a particular tissue type, e.g. for detection of cancer, is dealt with in the subgroups <u>A61B 5/0088</u>, <u>A61B 5/0091</u>, <u>A61B 5/02007</u>, <u>A61B 5/40</u> - <u>A61B 5/45</u>.

Determination of blood, body fluid or tissue analytes, or blood constituents, e.g. red blood cells, is dealt with in A61B 5/145 and subgroups.

For example, evaluating bone is classified in <u>A61B 5/4504</u>; evaluating skin cells is found in <u>A61B 5/441</u> and subgroups.

Apparatus for radiation diagnosis, clinical applications	<u>A61B 6/50</u>
Detecting organ movements or changes, e.g. tumours, cysts, swellings	<u>A61B 8/08</u>
Other methods or instruments for diagnosis, e.g. instruments for taking a cell sample	<u>A61B 10/00</u>

{Body fat}

Definition statement

This place covers:

Appartus and methods for determining the proportion of fat in the body. Includes determining the ratio of fat to fat free mass, e.g. using ultrasound, optical measurements, calipers, flotation tanks.

References

Limiting references

This place does not cover:

Skin gauging A61B 5/0053	
--------------------------	--

A61B 5/4875

{Hydration status, fluid retention of the body}

Definition statement

This place covers:

Apparatus and methods for determining the proportion of fluid in the body or hydration status, Includes water compartments, extracellular water, intercellular water.

A61B 5/4884

{inducing physiological or psychological stress, e.g. applications for stress testing}

Definition statement

This place covers:

Patient is subjected to stress situation, e.g. exercise, change of posture, drugs or valsalva manoeuvre during measurement of physiological parameters. e.g. to determine rate of recovery/investigate regulatory mechanism (homeostasis).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Measuring heart rate variability	<u>A61B 5/02405</u> .

Measuring spinal fluid pressure	<u>A61B 5/032</u>
Puncturing needles for the peridural or subarachnoid space or the plexus, e.g. for anaesthesia	<u>A61B 17/3401</u>

A61B 5/68

{Arrangements of detecting, measuring or recording means, e.g. sensors, in relation to patient}

Definition statement

This place covers:

Arrangements for ensuring the correct position for a sensor to detect a physiological quantity on a patient.

It relates to the position of the sensor, independently of the part of the body which is object of the diagnosis. For example, if impedance electrodes are placed on hands and feet to detect an impedance value of the whole body, the corresponding document must be classified in this group even if no diagnosis of hands and feet is carried out.

References

Limiting references

This place does not cover:

Sensors provided on surgical tools for measuring tool-related quantities, e.g., contact between tool and tissue, tool penetration length	<u>A61B 90/06</u>

A61B 5/6801

{specially adapted to be attached to or worn on the body surface}

Definition statement

This place covers:

Means for attaching a sensor to a patient's body or for positioning a sensor in contact with a patient's body

A61B 5/6802

{Sensor mounted on worn items}

Definition statement

This place covers:

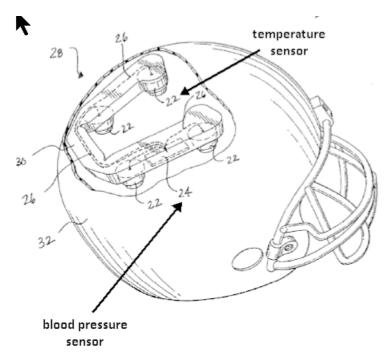

Any kind of clothing which is specially adapted to position a sensor in contact with the body

{Head-worn items, e.g. helmets, masks, headphones or goggles}

Definition statement

This place covers:

Sensors for measurement on the head. Includes headbands, head straps, masks, spectacles, helmets and caps.

References

Limiting references

This place does not cover:

Measurement on the eye	<u>A61B 3/00</u>
Sensors to be placed on foetus's head	<u>A61B 5/288</u>

A61B 5/683

{Means for maintaining contact with the body (A61B 5/6802 takes precedence)}

Definition statement

This place covers:

Means specially adapted for maintaining contact between different surfaces, specially adapted to maintain contact between a sensor and the human or animal body.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

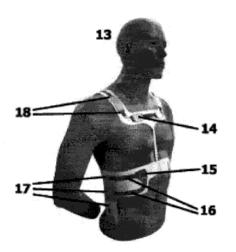

Sensors mounted on worn items	<u>A61B 5/6802</u>
-------------------------------	--------------------

{Straps, bands or harnesses}

Definition statement

This place covers:

Sensor is attached to the body, e.g. chest, shoulders, by straps, bands, harnesses

A61B 5/6832

{using adhesives (A61B 5/259 takes precedence)}

Definition statement

This place covers:

Sensors provided with an adhesive layer for attachment to the skin or body surface that is not a separable or detachable element from the sensor. Includes adhesive applied directly to the skin surface.

References

Limiting references

This place does not cover:

Using conductive adhesive means, e.g. gels	<u>A61B 5/259</u>
--	-------------------

A61B 5/6833

{Adhesive patches}

Definition statement

This place covers:

Separate adhesive patch or wrap for attaching the sensor to the patient's skin.

{using vacuum}

Definition statement

This place covers:

Attaching sensor/probe to the skin surface by vacuum.

Sensors mounted on harnesses	<u>A61B 5/6831</u>
------------------------------	--------------------

A61B 5/6842

{by marking the skin}

Definition statement

This place covers:

Site of sensor attachment is marked/referenced (e.g., by marker) so that the sensor may repositioned on the same site. Includes taking an anatomical reference, e.g. palm-print, photograph.

A61B 5/6843

{Monitoring or controlling sensor contact pressure}

Definition statement

This place covers:

Determining degree of contact between sensor and body surface by any means, e.g. spring bias, inflatable ballons, measuring impedance, measuring applied pressure etc.

{Monitoring or controlling distance between sensor and tissue}

Definition statement

This place covers:

Determining, monitoring or controlling the distance between sensor and body surface in order to ensure consistency of measurements taken by the sensor.

A61B 5/6846

{specially adapted to be brought in contact with an internal body part, i.e. invasive}

Definition statement

This place covers:

Means for attaching or positioning a sensor in contact with an internal part of the patient's body

A61B 5/6847

{mounted on an invasive device}

Definition statement

This place covers:

Sensor is part of an implant (including short-term implants such as needles).

References

A61B 5/6853

{with a balloon}

Definition statement

This place covers: The sensor is mounted on a balloon catheter

{with a distal curved tip}

Definition statement

This place covers: Sensor mounted on a catheter with a curved tip

A61B 5/6856

{with a distal loop}

Definition statement

This place covers: Sensor is mounted on a catheter with a looped tip

A61B 5/6857

{with a distal pigtail shape}

Definition statement

This place covers:

Sensor is mounted on a catheter tip with one or more loops, the plane of the loop being perpendicular to the longitudinal axis of the catheter

A61B 5/6858

{with a distal basket, e.g. expandable basket}

Definition statement

This place covers: Sensor is mounted on a catheter with an expandable basket or cage

A61B 5/6859

{with multiple distal splines}

Definition statement

This place covers:

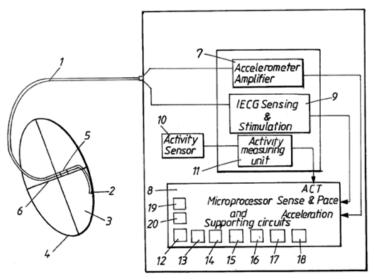

Sensor is mounted on a catheter with multiple splines/prongs/tines/spines/arms not joined at their distal tips. Splines are usually expandable from a retracted position.

{Permanently implanted devices, e.g. pacemakers, other stimulators, biochips (<u>A61B 5/6861</u> takes precedence)}

Definition statement

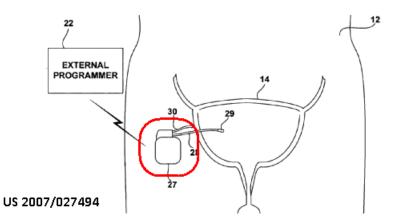

This place covers:

Specific details of sensors mounted on pacemakers...

WO 2006/025770

... or on implanted devices comprising a housing like that of a pacemaker

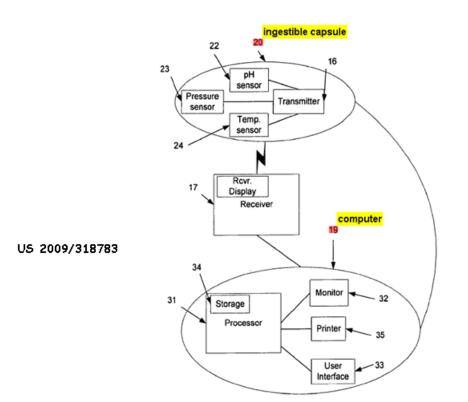

{Capsules, e.g. for swallowing or implanting}

Definition statement

This place covers:

Sensor is mounted on ingestible or implantable capsule, excluding pacemakers.

References

Limiting references

This place does not cover:

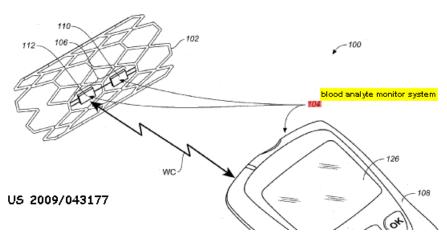

Ingestible capsules with imaging means	A61B 1/041

A61B 6/00

Apparatus or devices for radiation diagnosis; Apparatus or devices for radiation diagnosis combined with radiation therapy equipment (instruments measuring radiation intensity for application in the field of nuclear medicine, e.g. in vivo counting, <u>G01T 1/161</u>; apparatus for taking X-ray photographs <u>G03B 42/02</u>)

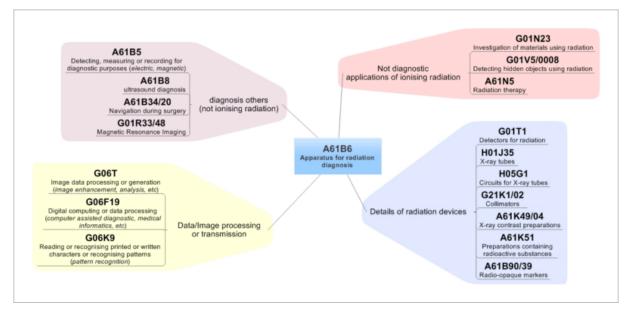

Definition statement

This place covers:

Diagnostic equipment and / or methods involving the use of ionising radiation, e.g. X-ray or gamma ray. Other devices for radiation diagnosis can be found in:

Electric currents or magnetic fields	<u>A61B 5/05</u>
Magnetic resonance	<u>A61B 5/055</u>
Optical imaging	A61B 5/0059
Opto-acoustic imaging	A61B 5/0093

Devices for radiation diagnosis generally consist of complex electro-mechanical arrangements of radiation source and detection units, controlled following a particular acquisition technique to obtain medical diagnostic data relating to a patient's body part. A complete characterization of these devices therefore requires the identification of both constructional and operational aspects according to the following rules.

Relationships with other classification places

Several subclasses, groups and subgroups provide for the different components or functional aspects constituting the devices for radiation diagnosis. It should be emphasized that documents describing these components should be classified in <u>A61B 6/00</u> only if they disclose a radiation diagnostic device and the link between said components or functional aspects and the radiation diagnostic device or clinical application is not trivial.

As an example, a document describing constructional details of a PET scanner should have the subgroup A61B 6/037 and the corresponding class for said constructional details (a subgroup of A61B 6/44). A document describing particular details of a radiation detector should be classified in the corresponding group of G01T 1/00, even if a clinical application of said detector is mentioned. However, if e.g. details of the arrangement of said detector in a scanner for said particular clinical application are disclosed, then it should also be classified in A61B 6/037 and in the corresponding subgroup of A61B 6/50.

The same principle applies to other neighbouring fields such as image processing $\underline{G06T}$. A document disclosing an algorithm for image enhancement should be classified under the corresponding subclass of $\underline{G06T}$, even if the document mentions that the images are X-ray images.

However, if the algorithm requires particular constructional or functional details of the radiation diagnostic device or if there is a non-obvious link to the particular clinical application, then the document should also be classified in the corresponding subgroup of <u>A61B 6/00</u>.

On the other hand, classify only in <u>A61B 6/00</u>, if there is only a mention of use of an algorithm for image enhancement, but the disclosure deals mainly with details of the radiation diagnostic device.

Devices for radiation diagnosis combined with radiation therapy equipment should be additionally classified in <u>A61N 5/00</u>.

References

Limiting references

This place does not cover:

Instruments measuring radiation intensity for application in the field of nuclear medicine, e.g. in vivo counting	<u>G01T 1/161</u>

Special rules of classification

Some of the sub-groups are related to more constructional aspects and some to more functional aspects. This classification is however not strict, its purpose is only indicative, to simplify the overview of the scheme.

Construction-oriented aspects:

related to the generation of radiation	<u>A61B 6/40, A61B 6/06</u>
related to the detection of radiation	A61B 6/42, A61B 6/06, A61B 6/08
5	<u>A61B 6/02, A61B 6/10, A61B 6/46, A61B 6/51, A61B 6/56</u>
related to the patient support	<u>A61B 6/04</u>

Operation-oriented aspects:

Groups A61B 6/40 - A61B 6/58 do not correspond to former or current IPC groups.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

(radiation) source	artificial or natural ionizing radiation emitting element per se, e.g. X-ray tube anode, tracer
(radiation) source unit	constructional arrangement comprising a radiation source and housing, capable of emitting an oriented radiation beam, e.g. X-ray tube
Raw data	data output from the sensor/detector requiring pre-processing to be used for diagnostic purposes
diagnostic data	data readable or interpretable by medical personnel, obtained after pre-processing of raw data
Image data	medical diagnostic data in the form of two- or three-dimensional data sets

A61B 6/02

Arrangements for diagnosis sequentially in different planes; Stereoscopic radiation diagnosis

Definition statement

This place covers:

Devices and imaging techniques for obtaining images of different planes, i.e. slices of the patient's body, in a sequential way.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Measuring radiation per se	<u>G01T 1/00</u>
Stereoscopic photography	<u>G03B 35/00</u>

Special rules of classification

The term "sequential" is used here for historical reasons, meaning that the device can be configured to obtain an image of a plane and subsequently, only by changing the device configuration and without moving the patient, to obtain a different plane. This aspect is not relevant anymore in the current definition, since a cone-beam CT would obtain images of different planes simultaneously but would still be classified under A61B 6/032 (a subgroup of A61B 6/02).

Acquisition of projections for reconstructing an image is not considered to be a temporal series of images (A61B 6/486), since the reconstructed image will be associated to a single time.

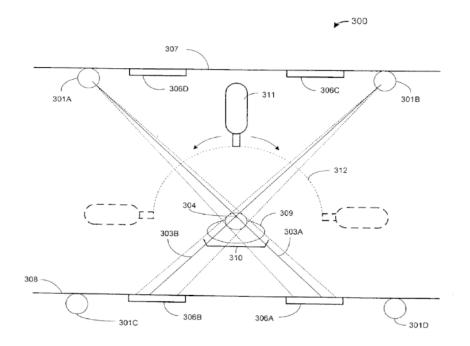

{Stereoscopic imaging}

Definition statement

This place covers:

Acquisition and/or display of two offset images.

This group covers both functional (e.g. stereoscopic imaging technique) and constructional aspects (stereoscopic imaging scanners) of radiation-based stereoscopic imaging.

A61B 6/025

{Tomosynthesis}

Definition statement

This place covers:

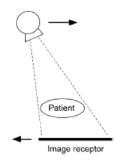

Classical geometric tomography is a method of producing an image of a three-dimensional object (human body) by moving an x-ray source in an opposing motion (x-ray tube and film housing) during exposure to sharpen the structure images in the focal plane and produce a single film integrated x-ray. The objects in the planes above and below the fulcrum are blurred in proportion to their distance from the plane of focus due to parallax.

Modern tomosynthesis is a technique of using a series of source positions from varying orientations to produce a group of images and with a computer program reconstruct the arbitrary planes into the final clear image.

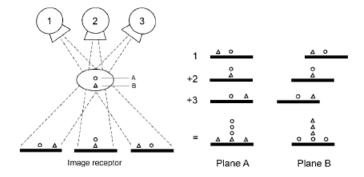

This group covers both functional (e.g. tomosynthesis imaging technique) and constructional aspects (tomosynthesis scanners) of radiation-based tomosynthesis imaging.

Illustrative examples of the subject matter classified in this place:

1. Classical geometric tomography

2. Modern tomosynthesis

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Transmission computed tomography	<u>A61B 6/032</u>
Application mammography	<u>A61B 6/502</u>
Reconstruction from projections	<u>G06T 11/003</u>

Special rules of classification

In modern tomosynthesis the sequence of orientations defines an acquisition trajectory which, if relevant, should be classified under <u>A61B 6/027</u>.

In case of a circular trajectory of the source and the detector, said rotation is shorter than 180° + fan angle of the beam (acquisition of an incomplete dataset). If the rotation is longer, then a complete dataset is acquired and the technique is computed tomography (see <u>A61B 6/032</u>).

This technique is often used for breast imaging; in such a case it should be classified also in <u>A61B 6/502</u>.

{characterised by the use of a particular data acquisition trajectory, e.g. helical or spiral}

Definition statement

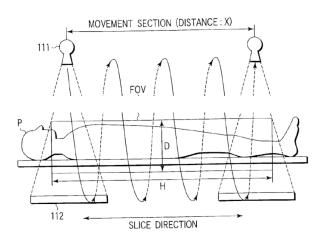

This place covers:

Relevant details concerning the sequence of positions of source and detector defining a trajectory along which X-ray images (projections of views) for a subsequent reconstruction are acquired. Diagnostic techniques requiring data acquisition along a particular trajectory are typically:

Computed tomography A61B 6/032

Tomosynthesis A61B 6/025

Helical acquisition trajectory for computed tomography (A61B 6/032):

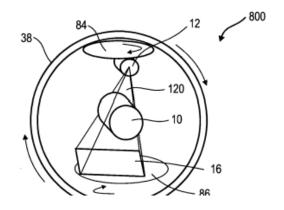

Partial isocentric motion with stationary detector in tomosynthesis, <u>A61B 6/025</u>, in which the detector stays in one place or is stationary while the x-ray tube rotates around a point of rotation.

References

Informative references

Tomosynthesis	<u>A61B 6/025</u>
Computed Tomography	<u>A61B 6/032</u>
Trajectory planning for programme-controlled manipulators (e.g. robotic arms)	<u>B25J 9/1664</u>

This class also covers devices where a movement of the source unit is superimposed to e.g. a circular trajectory.

A61B 6/03

Computed tomography [CT] (echo-tomography A61B 8/14)

Definition statement

This place covers:

Measuring radiation from different angles and reconstructing (computing) a 2D image (slice) or a 3D image (set of slices).

This group includes tomography (system or function) which does not fall into the subgroups of transmission tomography (<u>A61B 6/032</u>) or emission tomography (<u>A61B 6/037</u>), or wherein the kind of tomography is not specified.

This group covers both functional (e.g. tomography) and constructional aspects (tomographs) of both transmission and emission tomography imaging.

References

Limiting references

This place does not cover:

Echo-tomography	<u>A61B 8/14</u>
-----------------	------------------

Informative references

Optical tomography	<u>A61B 5/0073</u>
Diagnosis using magnetic resonance tomography	<u>A61B 5/055</u>
Tomosynthesis	<u>A61B 6/025</u>
Reconstruction from projections	<u>G06T 11/003</u>
Healthcare informatics for handling or processing of medical images, e.g. DICOM, PACS	<u>G16H 30/00</u>

Computed tomography in radiation diagnosis is basically either transmission tomography (A61B 6/032) or emission tomography (A61B 6/037). The subgroups of A61B 6/03 cover therefore all possible options so that A61B 6/03 is mainly to provide structure in the scheme. Documents disclosing transmission tomography (e.g. CT) or emission tomography (e.g. PET) should be classified in A61B 6/032 or A61B 6/037, respectively, but not in A61B 6/03.

A61B 6/032

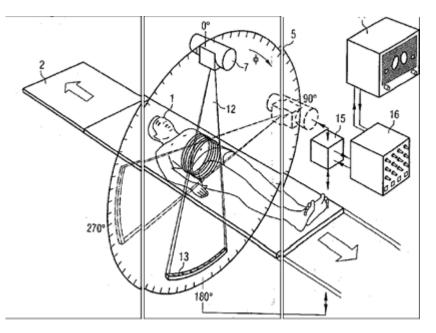

{Transmission computed tomography [CT]}

Definition statement

This place covers:

The source emits a radiation beam from outside the body and the attenuation of the beam is measured by a detector after the beam has traversed the patient's body. This measurement is carried out from different angles and an image (representing the values of the attenuation coefficient of the radiation at every position in space) is reconstructed (computed) from the measurements.

A typical configuration consists of an X-ray source unit emitting a 2D dimensional beam in the form of a fan (fan-beam) and a curved detector (1 line) which rotate around the patient along a circular trajectory to reconstruct (compute) a 2D image (slice) of the patient on the plane of said circular trajectory.

To obtain a 3D image (set of slices) the patient table can be moved steadily during acquisition so that the acquisition trajectory of source and detector with respect to the patient becomes a spiral or helix (see <u>A61B 6/027</u>)

The group covers both functional (e.g. computerized tomography) and constructional aspects (computerized tomographs) of transmission tomography imaging.

References

Informative references

	Optical tomography	A61B 5/0073
--	--------------------	-------------

Diagnosis using magnetic resonance tomography	<u>A61B 5/055</u>
Tomosynthesis	<u>A61B 6/025</u>
Transmission ultrasound tomography	<u>A61B 8/15</u>
Reconstruction from projections	<u>G06T 11/003</u>

Transmission tomography as a technique that can be carried out with any device capable of acquiring views (projections) from different angles and can rotate at least 180° + fan angle around the patient. Devices with a more constrained rotational trajectory are not capable of performing tomographic imaging and are restricted to perform tomosynthesis (A61B 6/025).

If the device is a CT scanner, it should be classified here (<u>A61B 6/032</u>), otherwise said devices are classified according to their constructional features <u>A61B 6/444</u>, e.g. C-arm (<u>A61B 6/4441</u>), robotic arms (<u>A61B 6/4458</u>).

To obtain a 3D image (set of slices) the patient table is moved during acquisition so that the acquisition trajectory of source and detector with respect to the patient becomes a spiral or helix (see <u>A61B 6/027</u>).

Alternatively, a device with a source emitting a cone-beam (<u>A61B 6/4085</u>) combined with a twodimensional detector (<u>A61B 6/4233</u>) is used. Or both, a particular acquisition trajectory (<u>A61B 6/027</u>) and a cone-beam with a 2D detector (<u>A61B 6/4085</u> and <u>A61B 6/4233</u>, respectively) are combined.

A61B 6/037

{Emission tomography}

Definition statement

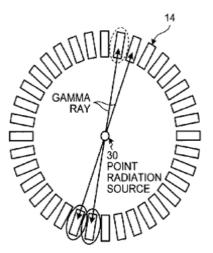

This place covers:

The source (typically a radioactive tracer) emits radiation from inside the body which is measured outside the body with one or more detectors from different orientations and an image (representing the distribution of the tracer inside the body) is reconstructed (computed) from the measurements.

PET or SPECT scanners are classified under A61B 6/037.

Illustrative example of subject matter classified in this place:

1.

Multi-leaf collimators for intensity modulated radiation therapy	<u>A61N 5/1045</u>
Diaphragms/collimators per se	<u>G21K 1/02</u>

Special rules of classification

Rules for classifying other devices situated on the beam path, used to modify properties of the beam:

- Filters (<u>A61B 6/4035</u>): modify a property of the beam but not its spatial confinement, e.g. the spectrum, or the intensity distribution.
- Gratings: cause diffraction and are used mainly for phase measurements.
- Grids: arrangements of blades situated along the detector pixels and used to block scattered radiation.

Grids and gratings are classified depending on their position:

- A61B 6/4035 when situated between source unit and patient,
- <u>A61B 6/4291</u> when situated between patient and detector.

A61B 6/08

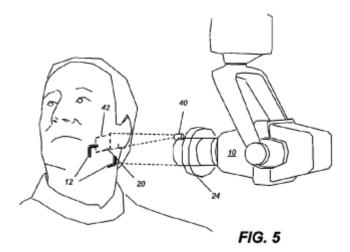

Auxiliary means for directing the radiation beam to a particular spot, e.g. using light beams

Definition statement

This place covers:

Radiation diagnosis devices comprising means for assessing direction and / or extent of the radiation beam before acquisition. The auxiliary means typically consist in a light source (e.g. laser) projecting light from a point near the radiation source towards an imaging region. The projected beam can be point-like or reflect the spatial extent of the radiation beam and is typically used for monitoring / setting

the alignment of the source unit with the detector unit (A61B 6/587) and/or the distance between the source unit and the patient (A61B 6/589) and / or detector unit (A61B 6/588).

Radio-opaque markers	<u>A61B 90/39</u>
----------------------	-------------------

This group covers the use of radiation diagnostic devices to determine the position of a surgical instrument during an operation, e.g. using a C-arm classified in <u>A61B 6/4441</u> for performing fluoroscopy classified in <u>A61B 6/487</u>. However, it does not cover path calculations and guiding of said instruments classified in <u>A61B 34/20</u>.

A61B 6/40

Arrangements for generating radiation specially adapted for radiation diagnosis

Definition statement

This place covers:

Radiation diagnostic devices comprising a radiation source for generating radiation and arrangements for manipulating said radiation by shaping the radiation beam, displacing it or modifying its characteristics.

Radiation sources cover both radiation source units to generate a radiation beam outside the patient oriented towards the patient (e.g. X-ray tubes) and radioactive tracers emitting radiation from inside the body due to radioactive decay <u>A61B 6/4057</u>.

NOTE: radioactive tracers are not considered to be contrast agents but sources of radiation in the sense of <u>A61B 6/40</u>.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Arrangements for focusing or moderating radiation	<u>G21K 1/00</u>
Irradiation devices	<u>G21K 5/00</u>
Details of X-ray tubes	<u>H01J 35/00</u>
Circuits for X-ray tubes	<u>H05G 1/00</u>

Special rules of classification

Typically involves the generation of a radiation beam having a particular spatial configuration <u>A61B 6/4007</u>, <u>A61B 6/4035</u>, <u>A61B 6/4064</u>, movement <u>A61B 6/4021</u>, <u>A61B 6/4057</u>, intensity <u>A61B 6/405</u> or spectrum <u>A61B 6/4035</u>.

Documents should be classified in these subgroups only if:

- · they explicitly relate to radiation diagnosis devices AND
- they comprise constructional details of the source unit(s).

Devices for modifying the spatial confinement of the beam (collimators) should be classified under <u>A61B 6/06</u>.

{characterised by using a plurality of source units}

Definition statement

This place covers:

A combination of a cathode and a dedicated anode is considered to be a single source unit. In cathode-anode based source units, multiple source units have therefore multiple cathode-anode pairs.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Circuit arrangements driving apparatuses comprising more than one X-	<u>H05G 1/70</u>
ray tube	

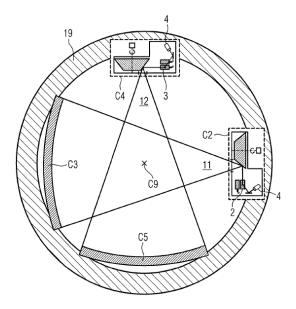

A61B 6/4014

{arranged in multiple source-detector units}

Definition statement

This place covers:

Radiation diagnosis devices comprising a plurality of source unit and a plurality of detector units, each source unit being functionally associated with a detector unit.

References

Informative references

Devices for radiation diagnosis using a plurality of detector units	<u>A61B 6/4266</u>
Multiple energy imaging	<u>A61B 6/482</u>
Circuit arrangements driving apparatuses comprising more than one X- ray tube	<u>H05G 1/70</u>

Devices where each source unit emits a ray with a different energy should be also classified under <u>A61B 6/482</u>.

Although these devices also have a plurality of detectors they should not be classified under <u>A61B 6/4266</u> since it is implicit that if the sources are arranged in source-detector units, the devices also have a plurality of detectors (i.e. <u>A61B 6/4014</u> takes precedence).

A61B 6/4021

{involving movement of the focal spot}

Definition statement

This place covers:

Modification of focal spot position on the anode or between multiple anodes be it in static imaging or in imaging modalities where source unit and detector unit perform data acquisition while following a certain trajectory (swing focus, spring focus, alternating focus, flying focus).

This subgroup covers not only active control of the movement of the focal spot, but also analysis and correction of fluctuations of the position of the focal spot on the anode.

References

Informative references

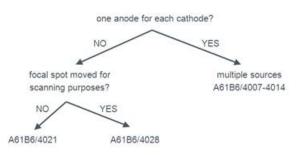

Attention is drawn to the following places, which may be of interest for search:

Radiation devices characterised by the use of a certain acquisition trajectory	<u>A61B 6/027</u>
Multiple energy imaging	<u>A61B 6/482</u>
Tubes wherein the point of impact of the cathode ray on the anode or anti-cathode is movable relative to the surface thereof	<u>H01J 35/24</u>

Special rules of classification

If modifying the position of the focal spot implies generating a beam of different energy, the device should be classified also under <u>A61B 6/482</u>.

See <u>A61B 6/4007</u> for the definition of single/multiple sources.

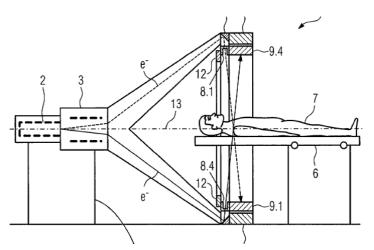

{resulting in acquisition of views from substantially different positions, e.g. EBCT}

Definition statement

This place covers:

Devices where the displacement of the radiation beam during the data acquisition process (scan) to obtain images or projection data from different angles is carried out by translation of the focal spot, as is typically done in electron beam computed tomography (EBCT).

[DE102007036038]

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Tubes wherein the point of impact of the cathode ray on the anode or	H01J 35/24
anti-cathode is movable relative to the surface thereof	

A61B 6/4035

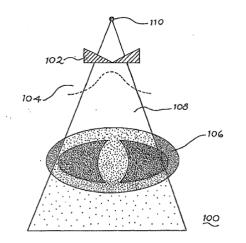

{the source being combined with a filter or grating}

Definition statement

This place covers:

Radiation diagnosis devices wherein the source unit is combined with a filtering means adapted to modify the spatial distribution of the intensity or the spectral characteristics of the radiation beam, e.g. bowtie filters.

Filters to modify a property of the beam but not its spatial confinement, e.g. the spectrum, or the intensity distribution, e.g. bowtie filters.

This class also includes gratings to cause diffraction and are used mainly for phase measurements, and grids, i.e. arrangements of blades situated along the detector pixels and used to block scattered radiation, when they are situated between source unit and patient.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Collimators for radiation diagnosis devices	<u>A61B 6/06</u>
Detector combined with grid or grating	<u>A61B 6/4291</u>
Multiple energy imaging	<u>A61B 6/482</u>
X-ray phase contrast imaging	<u>A61B 6/484</u>
X-ray filters per se	<u>G21K 1/10</u>

Special rules of classification

Rules for classifying other devices situated on the beam path, used to modify properties of the beam:

- collimators to modify the spatial confinement of the radiation beam should be classified under <u>A61B 6/06</u>,
- gratings or grids situated between the patient and the detector should be classified under <u>A61B 6/4291</u>.

Radiation devices using filters to modify the spectral characteristics of the beam (i.e. modify the energy of the radiation beam) should be also classified under <u>A61B 6/482</u>.

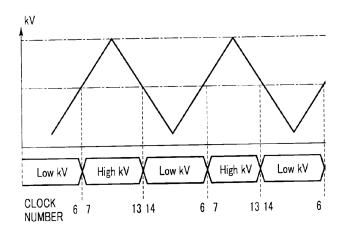

Grids for X-ray phase contrast imaging (<u>A61B 6/484</u>) should also be classified here, if they are positioned between the source and the patient.

{Source units specially adapted to modify characteristics of the beam during the data acquisition process (<u>A61B 6/4021</u>, <u>A61B 6/4035</u> take precedence)}

Definition statement

This place covers:

Radiation diagnosis devices involving arrangements to modify characteristics such as voltage or tube current during the data acquisition process.

[US2012230466]

References

Limiting references

This place does not cover:

Movement of the focal spot	<u>A61B 6/4021</u>
Source unit combined with a filter	A61B 6/4035

Informative references

Attention is drawn to the following places, which may be of interest for search:

Multiple energy imaging	<u>A61B 6/482</u>
Control of exposure	<u>A61B 6/542</u>
Arrangements changing the time structure of an already generated radiation beam	<u>G21K 1/043</u>
Controlling X-ray tubes	<u>H05G 1/30</u>

Special rules of classification

Modifying the characteristics of the beam by moving the focal spot or using filter should be classified under <u>A61B 6/4021</u> and <u>A61B 6/4035</u>, respectively.

Typically changing the voltage during image acquisition is used to modify the energy spectrum of the beam, which is related to multiple energy imaging (A61B 6/4021).

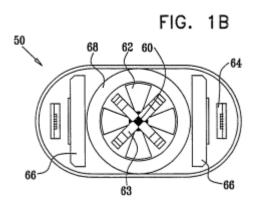

Modifying the tube current during data acquisition is typically used to control exposure to radiation (dose), hence A61B 6/542 might be relevant too.

{by using radiation sources located in the interior of the body (<u>A61B 6/037</u> takes precedence)}

Definition statement

This place covers:

Radiation diagnostic devices where the radiation source is introduced into the body, as part of a probe or capsule, or as a radioactive tracer.

References

Limiting references

This place does not cover:

Emission tomography (PET/SPECT)	<u>A61B 6/037</u>
---------------------------------	-------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Capsule endoscopes	<u>A61B 1/041</u>
Diagnosis using light using a probe introduced into the body	<u>A61B 5/0084</u>
Radiation diagnosis with detectors for detecting non X-ray radiation	<u>A61B 6/4258</u>
Ultrasound diagnosis in body cavities	<u>A61B 8/12</u>
Detection of radiation	<u>G01T 1/00</u>
X-ray tubes with small cross-section	<u>H01J 35/32</u>

Special rules of classification

A document disclosing a diagnostic application of PET or SPECT scanner <u>A61B 6/037</u> does not need to be classified also under <u>A61B 6/4057</u> to cover the radioactive tracer aspect since this is implicit in the <u>A61B 6/037</u> code. Only in the case that the document discloses particular technical properties of said tracer that solve a technical problem (e.g. specific tracer injection protocol, combination of tracers, tracer carried to a specific organ by a capsule before release) should the document be classified here.

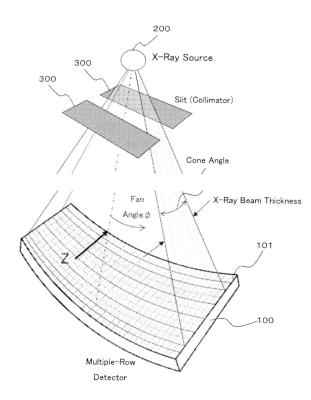

Applications of intraoperative gamma cameras to detect rests of tumours labelled with a radioactive tracer should get the codes <u>A61B 6/4057</u> and <u>A61B 6/4258</u>.

{specially adapted for producing a particular type of beam}

Definition statement

This place covers:

Particular technical features of the radiation beam, e.g. geometrical properties or type of radiation.

[EP2036498]

Special rules of classification

This class also covers the use for radiation diagnosis of a source generating any radiation which is not X-ray or synchrotron (A61B 6/4092) radiation, e.g. a radioisotope source.

A61B 6/42

Arrangements for detecting radiation specially adapted for radiation diagnosis

Definition statement

This place covers:

Radiation diagnosis devices comprising a detection unit arrangement specially adapted for a particular acquisition technique or diagnostic application, and arrangements for modifying the beam prior to detection, e.g. anti-scatter grids.

Reduction of scatter by image processing in devices for radiation diagnosis	A61B 6/5282
Anti-scatter grids	<u>G21K 1/02</u>
X-ray filters per se	<u>G21K 1/10</u>

Special rules of classification

Rules for classifying other devices situated on the beam path, used to modify properties of the beam:

- collimators to modify the spatial confinement of the radiation beam should be classified under <u>A61B 6/06</u>,
- filters or gratings situated between the source and the patient should be classified under <u>A61B 6/4035</u>.

{Constructional features of apparatus for radiation diagnosis}

Definition statement

This place covers:

Diagnostic devices comprising structural or mechanical arrangements allowing a specific usage or property, e.g. movement, modularity.

Special rules of classification

This class covers all details concerning constructional aspects not covered by any of the subgroups below.

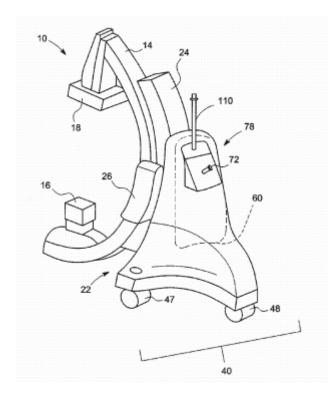

A61B 6/4405

{the apparatus being movable or portable, e.g. handheld or mounted on a trolley}

Definition statement

This place covers:

Mobile radiation diagnosis device, e.g. mounted on casters or rollers or small handheld devices, e.g. handheld intra-operative gamma cameras.

References

Informative references

Radiation diagnosis devices with anti-collision devices	<u>A61B 6/102</u> - <u>A61B 6/105</u>
Ultrasound diagnostic devices mounted on a trolley	<u>A61B 8/4405</u>

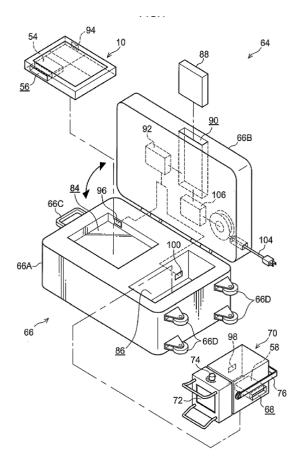

Mobile robots	<u>B25J 5/00</u>

{the apparatus being modular (A61B 6/4283 takes precedence)}

Definition statement

This place covers:

Modular construction of radiation diagnosis device allowing part to be exchanged or replaced either for mounting different types of components or for simpler disassembling and reassembling.

References

Limiting references

This place does not cover:

Detector units housed in a cassette	
-------------------------------------	--

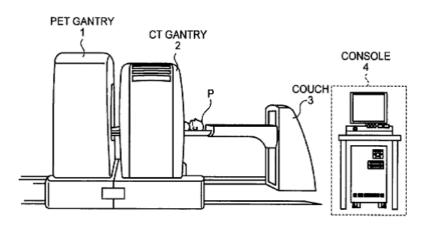

A61B 6/4283

{related to combined acquisition of different diagnostic modalities}

Definition statement

This place covers:

Constructional arrangements for facilitating the combined use of different imaging modalities including translation from one device to the other or integration of different modalities in one device. At least one modality using ionising radiation.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Optical diagnosis	<u>A61B 5/0059</u>
Magnetic resonance imaging	<u>A61B 5/055, G01R 33/48</u>
Transmission tomography	<u>A61B 6/032</u>
Emission tomography	<u>A61B 6/037</u>
C-arms	<u>A61B 6/4441</u>
Post-acquisition processing for combination of images from different modalities	A61B 6/5229 - A61B 6/5247
Diagnosis with ultrasound	<u>A61B 8/00</u>

Special rules of classification

This class covers all details concerning constructional aspects to combine different diagnostic modalities in one device.

(Ionising) radiation - (ionising) radiation: e.g. PET/CT

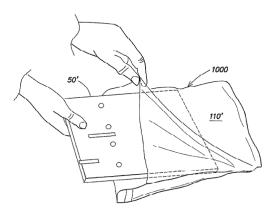

(Ionising) radiation - other type of diagnostics: e.g. CT/ultrasound <u>A61B 8/00</u>, X-ray/optical <u>A61B 5/0059</u>, CT/MRI <u>A61B 5/055</u>, <u>G01R 33/48</u>, etc.

This class does not cover the combination of images coming from the different modalities per se, said combination should be classified under <u>A61B 6/5229</u> and its subgroups, which specify whether the diagnostic modalities are both B6 modalities or B6 and another modality.

{related to hygiene or sterilisation}

Definition statement

This place covers:

[WO2004081867]

A61B 6/4429

{related to the mounting of source units and detector units}

Definition statement

This place covers:

Details of the mounting arrangement of the source units and/or detector units.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Devices for diagnosis sequentially in different planes; Stereoscopic	A61B 6/02
radiation diagnosis	

Special rules of classification

Imaging devices under <u>A61B 6/02</u> should only be classified here if the document describes particular details of the arrangement. E.g. a computed tomography scanner should be classified under <u>A61B 6/032</u> but not under <u>A61B 6/4435</u>, since it is implicit in such a device that source and detector unit are coupled by a rigid structure. However, a radiation device where source and detector unit are coupled by a rigid structure and which is capable of performing tomographic imaging should be classified both under <u>A61B 6/4435</u> and <u>A61B 6/032</u> (in such a case <u>A61B 6/032</u> code the functional aspect "computerised tomography" and not the constructional aspect "computerised tomograph").

{the source unit and the detector unit being coupled by a rigid structure}

Definition statement

This place covers:

Devices wherein the relative position and orientation of the source and detector units is fixed. Open structures such as C-frames and closed structures such as gantries.

Special rules of classification

Devices where the distance between source and detector or the orientation can be modified should be classified under <u>A61B 6/4452</u>.

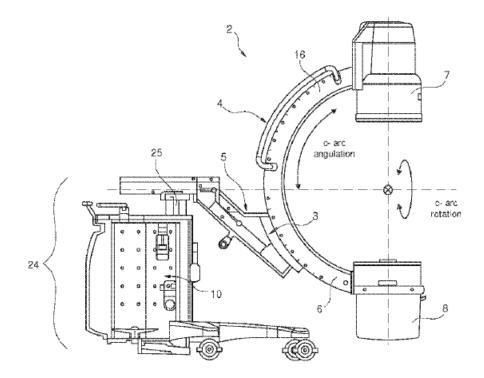

A61B 6/4441

{the rigid structure being a C-arm or U-arm}

Definition statement

This place covers:

Devices wherein the source and the detector are fixed on a c or u-shaped frame.

[WO2010128417]

References

Data acquisition trajectories in radiation diagnosis devices	<u>A61B 6/027</u>
Transmission tomography	<u>A61B 6/032</u>

Informative references

Fluoroscopy	<u>A61B 6/487</u>

Special rules of classification

C-arms are usually used for fluoroscopy (<u>A61B 6/487</u>) or for computerised tomography (<u>A61B 6/032</u>). Due to their flexibility they can acquire projection data (views) along different trajectories for tomographic reconstruction (<u>A61B 6/027</u>).

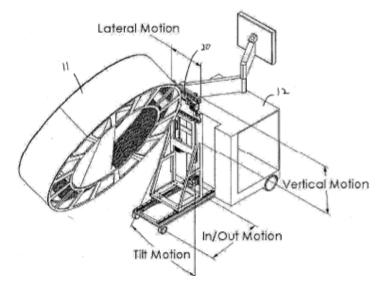

A61B 6/4447

{Tiltable gantries}

Definition statement

This place covers:

Devices wherein the source and the detector are fixed to a rigid frame forming a closed loop which can be tilted to image planes tilted with respect to the axial direction of the patient.

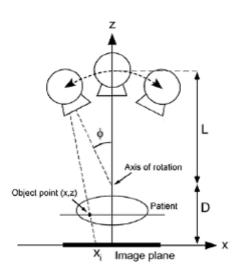

[US2003235266]

{the source unit and the detector unit being able to move relative to each other}

Definition statement

This place covers:

Devices wherein the relative position and orientation of the source and detector units can be changed, e.g. device for performing tomosynthesis (A61B 6/025) of the breast where source and detector units are shifted along a linear trajectory but the source always points to the detector unit.

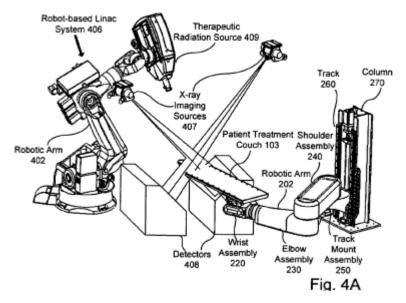

[Dobbins and Godfrey, "Digital x-ray tomosynthesis: current state of the art and clinicalpotential", Phys. Med. Biol. 48 (2003) R65–R106]

A61B 6/4458

{the source unit or the detector unit being attached to robotic arms}

Definition statement

This place covers:

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Details concerning robots	<u>B25J</u>

Special rules of classification

A robotic arm is considered to be constituted by a base and a series of segments connected by joints (at least two links and two joints) and has at least 3 degrees of freedom. Typically each joint has a motor that allows the movement of the arm. An arm which is merely telescopic is not considered to be a robotic arm.

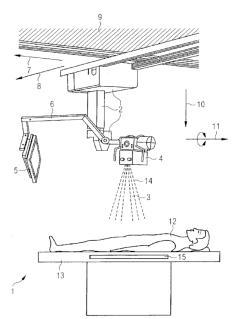

The robotic arm must be used to support at least part of the radiation diagnostic device, not e.g. only a radiotherapy source.

A61B 6/4464

{the source unit or the detector unit being mounted to ceiling}

Definition statement

This place covers:

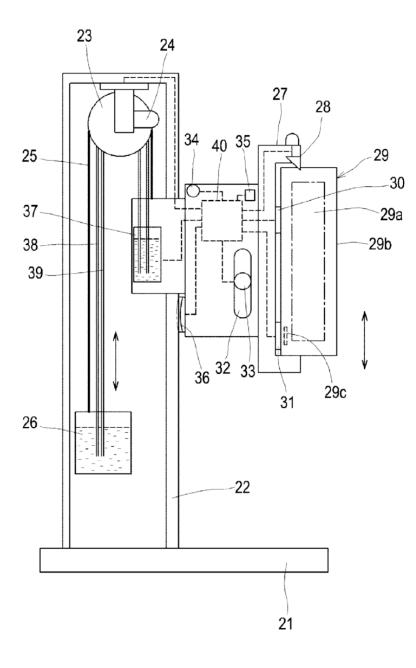

[US 2011/0182408]

{the source unit or the detector unit being mounted to counterpoise or springs}

Definition statement

This place covers:

Mechanical arrangements of the source and detector where their displacement is controlled by a counter balance or a spring.

{related to motor-assisted motion of the source unit}

Definition statement

This place covers:

Radiation devices where the movement of the source unit is controlled via a servomechanism, i.e. a feedback control to correct deviations in position (usually an electric or electronic motor).

A61B 6/4488

{Means for cooling (A61B 6/045 takes precedence)}

Definition statement

This place covers:

Means for cooling in general, e.g. cooling of anode in the radiation source, cooling of the detector, etc.

References

Limiting references

This place does not cover:

Tables or beds provide with heating or cooling means	<u>A61B 6/045</u>
--	-------------------

Special rules of classification

This class covers all aspects related to cooling in a radiation diagnostic device except for tables or beds with heating or cooling means (A61B 6/045).

A61B 6/4494

{Means for identifying the diagnostic device}

Definition statement

This place covers:

Any means for identifying X-ray apparatus or component parts thereof, e.g. removable filters, detectors. Includes bar codes, memory chips or RFIDs.

A61B 6/46

Arrangements for interfacing with the operator or the patient

Definition statement

This place covers:

Radiation diagnosis devices comprising input and/or output means structurally or functionally designed for allowing a specific interaction with the device user or the patient.

References

Both constructional (e.g. touch-screen, trackball) and functional aspects (e.g. specific purpose) of input means.

Definition statement

[WO2011066486]

[US2012093298]

A61B 6/468

{allowing annotation or message recording}

Definition statement

This place covers:

All types of message recording associated with radiation diagnosis imaging, e.g. annotation on image, sound recording.

A61B 6/469

{for selecting a region of interest [ROI]}

Definition statement

This place covers:

Operator selection of region of interest or specific organs to be imaged, e.g. by touch screen, keyboard or switch. Also for definition of ROI after image analysis.

Special rules of classification

This class does not cover automatic selection of a region of interest using image processing which should be classified under A61B 6/5211.

A61B 6/48

{Diagnostic techniques (<u>A61B 6/022</u>, <u>A61B 6/025</u> <u>A61B 6/032</u>, <u>A61B 6/037</u> take precedence)}

Definition statement

This place covers:

Diagnostic devices involving a specific use of ionising radiation to perform a particular type of diagnosis. Imaging techniques are independent of the device used for implementing them.

References

Limiting references

This place does not cover:

Stereoscopic imaging	<u>A61B 6/022</u>
Tomosynthesis	<u>A61B 6/025</u>
Transmission computed tomography	<u>A61B 6/032</u>
Emission tomography	<u>A61B 6/037</u>

Special rules of classification

Imaging techniques not found under <u>A61B 6/02</u> and not covered by any of the subclasses should be classified as <u>A61B 6/48</u>.

A61B 6/481

{involving the use of contrast agents}

Definition statement

This place covers:

Radiation diagnosis imaging based on or improved using an agent with particular properties for the absorption of radiation..

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Radiation diagnostic with radioactive tracers	<u>A61B 6/4057</u>
Acquisition of a temporal series of data	<u>A61B 6/486</u>
Diagnosis of blood vessels	<u>A61B 6/504</u>
Diagnosis of hemodynamic parameters	<u>A61B 6/507</u>
Contrast agents in ultrasound diagnosis	<u>A61B 8/481</u>
X-ray contrast preparations	<u>A61K 49/04</u>
Contrast agents in magnetic resonance imaging	<u>G01R 33/5601</u>

Special rules of classification

Mainly related to angiography (see also diagnosis of blood vessels A61B 6/504), but not exclusively.

The diagnostic of hemodynamic parameters (e.g. perfusion) by acquiring a temporal series of images should be classified under <u>A61B 6/507</u> and <u>A61B 6/486</u>.

Radioactive tracers are not considered to be a contrast agent but a source to be introduced into the body (<u>A61B 6/4057</u>).

{involving multiple energy imaging}

Definition statement

This place covers:

Radiation diagnostics using different radiation energy levels.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Source unit with multiple anodes	<u>A61B 6/4021</u>
Source unit combined with a filter	<u>A61B 6/4035</u>
Filters for multiple energy imaging	<u>A61B 6/4042</u>
Energy resolving detectors for radiation diagnosis	<u>A61B 6/4241</u>
Angiography	<u>A61B 6/504</u>
Diagnosis or bone	<u>A61B 6/505</u>
Measuring spectral distribution of X-rays	<u>G01T 1/36</u>

Special rules of classification

Radiation diagnostic devices based on multiple energy imaging should be classified under <u>A61B 6/482</u> and additionally according to the technique used to acquire the data at different energy levels, for example:

- A source with several anodes for producing beams with different energy A61B 6/4021.
- One beam with a certain energy spectrum which is filtered after leaving the source unit <u>A61B 6/4035</u>.
- One beam with a certain energy spectrum which is separated into several energy bands at the detector <u>A61B 6/4241</u>.
- A dual source-detector scanner with source units emitting radiation beams of different energies <u>A61B 6/4014</u> and <u>A61B 6/4266</u>.

Multiple energy imaging is typically used for examining bone $\underline{A61B 6/505}$ or with contrast agents $\underline{A61B 6/481}$, where two energy bands, one above and one under the K-edge of the contrast material are used to enhance the effect of the contrast agent in angiography $\underline{A61B 6/504}$.

A61B 6/483

{involving scattered radiation}

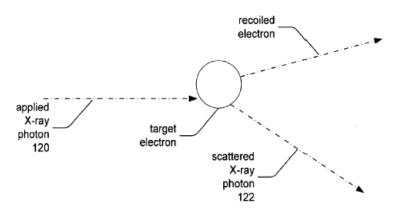

Definition statement

This place covers:

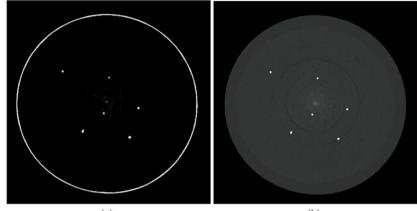

Radiation diagnostics using information from scattered radiation (non-ballistic photons).

Special rules of classification

This class does not cover reduction of artefacts caused by scatter from images (<u>A61B 6/5282</u>) or scatter correction performed in projection data before image reconstruction (<u>A61B 6/5205</u>).

[US2012157829]

(a)

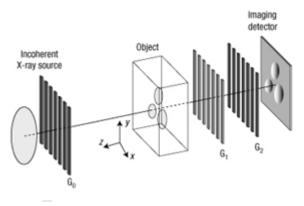

(b)

A61B 6/484

{involving phase contrast X-ray imaging}

Definition statement

This place covers:

{involving fluorescence X-ray imaging}

Definition statement

This place covers:

Radiation diagnostics using characteristic "secondary" (or fluorescent) X-rays from an object that has been excited by bombarding with high-energy X-rays or gamma rays.

References

Informative references

A61B 6/486

{involving generating temporal series of image data}

Definition statement

This place covers:

Dynamic imaging techniques, e.g. wherein a plurality of images of the same region are acquired during a predetermined amount of time.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

ECG	<u>A61B 5/318</u>
Transmission tomography	<u>A61B 6/032</u>
Contrast agents in radiation diagnosis	<u>A61B 6/481</u>
Diagnosis of heart	<u>A61B 6/503</u>
Haemodynamic parameters	<u>A61B 6/507</u>
Extracting a diagnostic parameter from image data	<u>A61B 6/5217</u>
Retrospective matching to a physiological signal	<u>A61B 6/5288</u>

Special rules of classification

Typically used for

- real-time imaging, e.g. fluoroscopy (A61B 6/487),
- acquisition of a series (<u>A61B 6/486</u>) of CT images (<u>A61B 6/032</u>) for the analysis (<u>A61B 6/5217</u>) of hemodynamic parameters, e.g. perfusion (<u>A61B 6/507</u>), with contrast agents (<u>A61B 6/481</u>),
- concurrent acquisition of data of the beating heart (<u>A61B 6/503</u>) with a CT (<u>A61B 6/032</u>) scanner and an ECG (<u>A61B 5/318</u>) for retrospectively matching the CT data to phases of the cardiac cycle (<u>A61B 6/5288</u>) and reconstruct a series of CT images of the heart in different cardiac phases (<u>A61B 6/486</u>).

{involving fluoroscopy}

Definition statement

This place covers:

Real-time X-ray imaging during an intervention.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Image intensifiers in radiation diagnosis	<u>A61B 6/4225</u>
Flat panel detectors in radiation diagnosis	<u>A61B 6/4233</u>
C-arms	A61B 6/4441

Special rules of classification

Initially fluoroscopy was carried out using a fluoroscope, i.e. using a fluorescent screen as a detector. Later image intensifiers (A61B 6/4225) were used, and nowadays (2012) typically flat panel detectors are used (A61B 6/4233).

Very often fluoroscopy is carried out using a C-arm (A61B 6/4441).

A61B 6/488

{involving pre-scan acquisition}

Definition statement

This place covers:

Diagnostic techniques in which a first acquisition is performed prior to the actual examination.

References

Informative references

Exposure control based on patient thickness	<u>A61B 6/544</u>
Automatic setup of acquisition parameters	<u>A61B 6/545</u>
Calibration	<u>A61B 6/582</u>

Special rules of classification

Typically used to identify the boundaries of the zone to be scanned and automatically adjust acquisition parameters (A61B 6/545) or to adjust the X-ray dose according to the size of the patient (A61B 6/544). The pre-scan acquisition might be carried out using a different device than the radiation diagnostic device, e.g. an optical camera.

A61B 6/50

specially adapted for specific body parts; specially adapted for specific clinical applications

Definition statement

This place covers:

Classification in this group depends on the body part or organ which is to be diagnosed. This group covers clinical applications not provided for in the subgroups.

Extracting physiological parameters from image data	<u>A61B 6/5217</u>

A61B 6/508

{for non-human patients}

Definition statement

This place covers:

Animal imaging and pre-clinical research. Also for veterinary imaging.

for dentistry

Definition statement

This place covers:

Radiation diagnosis devices specially adapted for dental examination, e.g. devices for panoramic imaging of the teeth.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Analysis of teeth using light	A61B 5/0088
Tomosynthesis	<u>A61B 6/025</u>
Computed tomography	A61B 6/032
Multiple detectors	A61B 6/4266
Radiation diagnosis of bone	A61B 6/505
Dentistry per se	<u>A61C 1/00</u> - <u>A61C 19/00</u>

Special rules of classification

Due to their rotation capabilities needed to acquire panoramic images of the teeth, devices for panoramic radiography are often adapted to acquire projection data and generate computed tomographic images or tomosynthesis. In that case, they should be also classified under <u>A61B 6/032</u> or <u>A61B 6/025</u>, respectively.

If the device combines panoramic radiography and other imaging techniques, then it might have different detectors for each imaging technique and it should be classified under <u>A61B 6/4266</u>.

A61B 6/52

{Devices using data or image processing specially adapted for radiation diagnosis}

Definition statement

This place covers:

Radiation diagnosis devices involving any kind of processing of data (raw data or diagnostic data) or image processing for enhancement purposes, e.g. artefacts reduction or resolution improvement.

This class covers data or image processing in radiation diagnostics not provided for in the subgroups.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Signal processing of physiological signals	<u>A61B 5/72</u>
Data/image processing in ultrasound diagnostics	<u>A61B 8/52</u>
Image processing per se	<u>G06T</u>
Image analysis per se	<u>G06T 7/00</u>
Image reconstruction from projection	<u>G06T 11/003</u>

Special rules of classification

Documents should be classified in these subgroups only if:

- they explicitly relate to radiation diagnosis devices AND
- they comprise details of data or image processing.

Image processing alone should not be classified in <u>A61B 6/52</u>, except when the processing is clearly adapted to a particular diagnostic device (e.g. removal of patient table from a CT image) or a specific diagnostic application (e.g. assessment of breast tumour size evolution from subsequent mammography acquisitions).

The subgroups are separated into processing of raw data (data output from the sensor requiring preprocessing to be used for diagnostic purposes) and diagnostic data (data readable or interpretable by medical personnel, obtained after pre-processing raw data).

A61B 6/5205

{involving processing of raw data to produce diagnostic data}

Definition statement

This place covers:

Pre-processing of data output from the sensor requiring pre-processing to be used for diagnostic purposes, e.g. sinogram filtering, combination of detector rows, columns or reconstruction of CT images from X-ray projections.

References

Informative references

Detectors calibration	<u>A61B 6/585</u>
Processing of raw ultrasound data	<u>A61B 8/5207</u>
Image reconstruction from projection	<u>G06T 11/003</u>

{involving processing of medical diagnostic data}

Definition statement

This place covers:

Processing of data readable or interpretable by medical personnel, obtained after pre-processing raw data.

A61B 6/5217

{extracting a diagnostic or physiological parameter from medical diagnostic data}

Definition statement

This place covers:

Acquired data is used to derive a particular diagnostic index, e.g. tumour size or perfusion rate.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Extracting a diagnostic/physiological parameter from ultrasound diagnostic data	<u>A61B 8/5223</u>
Algorithms for biomedical image analysis	<u>G06T 7/0012</u>
Segmentation algorithms	<u>G06T 7/10</u>
ICT specially adapted for medical diagnosis, medical simulation or medical data mining	<u>G16H 50/00</u>

Special rules of classification

This class includes also extracting a region of an image representing a certain organ or body part by segmentation.

A61B 6/5223

{generating planar views from image data, e.g. extracting a coronal view from a 3D image}

Definition statement

This place covers:

Generation of user selected planar views not coincident with CT slice images from CT data, e.g. sagittal or coronal slice images. Usually combined with 3D imaging.

References

Informative references

Radiation diagnosis devices adapted to display 3D data	<u>A61B 6/466</u>
3D image rendering	<u>G06T 15/00</u>

Special rules of classification

This class also covers specific medical imaging processing such as:

- generating a planar view from a 3D data set, e.g. DRR (digitally reconstructed radiographs),
- generating a planar view from a temporal series of 2D data, e.g. MIP (maximum intensity projection).

A61B 6/5229

{combining image data of a patient, e.g. combining a functional image with an anatomical image}

Definition statement

This place covers:

Means for combining images of one or several imaging modalities, e.g. merging of contiguous subimages to obtain a larger image or multi-modality image registration.

Special rules of classification

Typically used in angiography <u>A61B 6/504</u>.

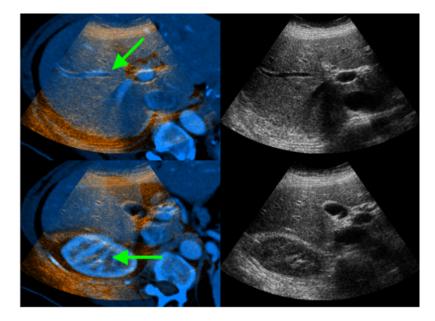

A61B 6/5247

{combining images from an ionising-radiation diagnostic technique and a nonionising radiation diagnostic technique, e.g. X-ray and ultrasound}

Definition statement

This place covers:

Combining images of the patient obtained by a <u>A61B 6/00</u> diagnostic technique (ionising radiation) and a non <u>A61B 6/00</u> diagnostic technique.

[Wein et al., " Automatic CT-ultrasound registration for diagnostic imaging and image-guided intervention", Medical Image Analysis, Volume 12, Issue 5, October 2008, Pages 577-585]

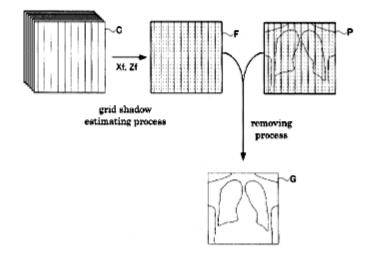

A61B 6/5252

{removing objects from field of view, e.g. removing patient table from a CT image}

Definition statement

This place covers:

Objects such as patient table, headrest, markers are eliminated from the diagnostic data. Does not apply to artefacts i.e. unpredictable features determined by heat, dust, light.

Special rules of classification

This subgroup concerns removing objects of known origin from the diagnostic images, it does not concern removing artifacts per se (i.e. unpredictable features determined by heat, dust, light), which should be classified under A61B 6/5258. Typical examples are removing the patient bed from a CT image or the anti-scatter grid from a radiograph (the artifact caused is of known geometry and has the shape of the grid, so it is considered as removing the grid and not an artifact), nor does it concern removal of body tissues such as bones or anatomic parts such as blood vessels.

A61B 6/5258

{involving detection or reduction of artifacts or noise}

Definition statement

This place covers:

Data or image processing for noise or artefact reduction in radiation diagnostic images.

References

Informative references

Algorithms for image enhancement	<u>G06T 5/00</u>
----------------------------------	------------------

Special rules of classification

Applies to reduction of artifacts inherent to the imaging technique (e.g. beam hardening in CT) or reduction of noise, but not to the removal of objects from the image (<u>A61B 6/5252</u>).

A61B 6/5264

{due to motion}

Definition statement

This place covers:

Data or image processing for artefact reduction wherein the artefacts are caused by motion.

A61B 6/527

{using data from a motion artifact sensor}

Definition statement

This place covers:

A motion sensor is used to detect motion and information from said sensor is used in the processing to remove motion artefacts.

References

Informative references

Informative references

Heart rate measurement per se	<u>A61B 5/024</u>
Evaluating respiratory organs	<u>A61B 5/08</u>
Monitoring thoracic expansion occurring during breathing	<u>A61B 5/113</u>
Electrocardiograms	<u>A61B 5/318</u>

Diagnostic technique involving the generation of a temporal series of image data	<u>A61B 6/486</u>
Extraction of physiological parameters from medical diagnostic data	<u>A61B 6/5217</u>
Radiation diagnosis devices where acquisition is triggered by a physiological signal	<u>A61B 6/541</u>

Special rules of classification

The physiological signal is typically an electrocardiogram (ECG) <u>A61B 5/318</u> or a device to measure the cardiac cycle <u>A61B 5/0803</u>.

As an example, a radiation diagnostic device with synchronous acquisition of projection data with a C-arm (A61B 6/4441) and an ECG (A61B 5/318) wherein the projection data is retrospectively associated to a certain cardiac phase (A61B 6/5288) to reconstruct a temporal series of images (A61B 6/486) of the heart (A61B 6/503) in different cardiac phases.

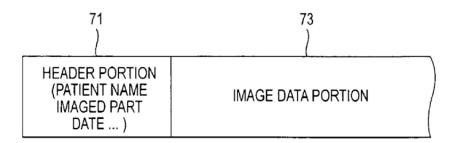

A61B 6/5294

{involving using additional data, e.g. patient information, image labeling, acquisition parameters}

Definition statement

This place covers:

Processing of data using non measured data, such as patient name or age, or image identification. Typically data can be found in the header of a digital image file (e.g. a DICOM header).

[US2006257040]

Control of exposure during data acquisition in radiation diagnostic devices A61B 6/542

Special rules of classification

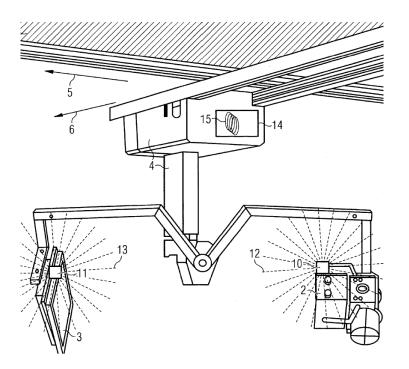

This class does not cover dynamic control of acquisition parameters to minimise patient exposure to radiation <u>A61B 6/542</u>.

{involving tracking of position of the device or parts of the device}

Definition statement

This place covers:

Means for tracking position of any part of the radiation diagnosis device (e.g. table, C-arm). Includes optical markers, ultrasound sensors, visual linear scales.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Locating a surgical device in the body with a radiation diagnostic device	<u>A61B 6/12</u>
phantoms for determining position of parts of the device	<u>A61B 6/584</u>
Surgical navigation systems	<u>A61B 34/20</u>

Special rules of classification

This class does not cover tracking the position of a surgical device <u>A61B 6/12</u> or guiding a surgical device <u>A61B 34/20</u>.

A61B 6/548

{Remote control of the apparatus or devices}

Definition statement

This place covers:

Remote control of any operational aspect (data acquisition, configuration, etc) of radiation diagnosis devices.

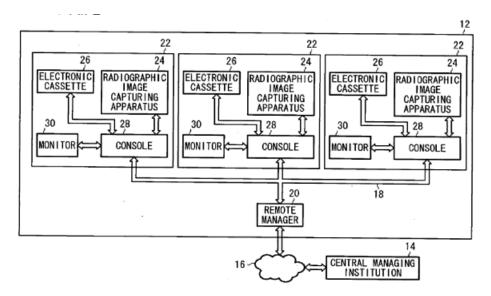

Informative references

Attention is drawn to the following places, which may be of interest for search:

Transmission of radiation diagnosis data via a network	<u>A61B 6/56</u>
Transmission of radiation diagnosis images via a network	<u>A61B 6/563</u>

Special rules of classification

Remote control is often carried out through a data network and involves transmission of data <u>A61B 6/56</u> or image data <u>A61B 6/563</u>.

This class covers any kind of remote control, either of the diagnostic device itself or of devices, which are directly related to acquisition of diagnostic data. Typically remote control is carried out through a data network and involves transmission of data <u>A61B 6/56</u> or image data <u>A61B 6/563</u>, but the concept is to be interpreted broadly, covering e.g. also a cable with a controller to be used in the same room. It is important however that there is a technical effect associated with the distance to the device.

- If there is a link between the remote controlled device and the data acquisition, then the subgroup <u>A61B 6/548</u> should be given, even if what is remote controlled is e.g. an injector.
- This class also covers voice control.

Relationship between <u>A61B 6/548</u> and <u>A61B 6/581</u>: <u>A61B 6/548</u> relates to control of data acquisition for diagnostic purposes (e.g. remote configuration) while <u>A61B 6/581</u> relates to checking malfunctioning or adjusting the device itself (e.g. remote calibration or fault detection).

A61B 6/56

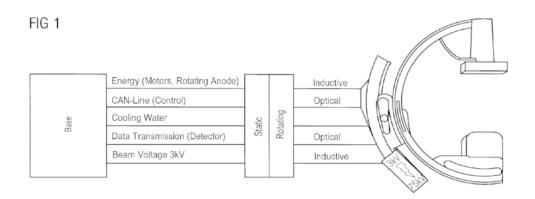

{Details of data transmission or power supply, e.g. use of slip rings}

Definition statement

This place covers:

Radiation diagnosis devices comprising :

- means for transmitting / receiving data to / from an external device or between components of the device, e.g. image transmission to a remote physician workstation for diagnosis; or
- means for supplying power to any component of the device, e.g. between stationary and moving parts.

[US2011066022]

References

A61B 6/586

{Detection of faults or malfunction of the device}

Definition statement

This place covers:

Any means for determining or identifying a fault or failure in X-ray apparatus or component parts thereof.

[US2011129067]

A61B 6/587

{Alignment of source unit to detector unit}

Definition statement

This place covers:

Any means for aligning the source and detector unit or any use of a radiation diagnostic device involving the alignment of source and detector units.

Informative references

Attention is drawn to the following places, which may be of interest for search:

Means for directing the radiation beam to a particular spot	<u>A61B 6/08</u>
Radiation diagnostic devices comprising source and detector units movable relative to each other	<u>A61B 6/4452</u>
Calibration in radiation diagnostic devices	<u>A61B 6/582</u>
Calibration using phantoms to determine position of parts of a device	<u>A61B 6/584</u>

Special rules of classification

A calibration method for aligning the source and detector units should also be classified under <u>A61B 6/582</u> or <u>A61B 6/584</u> (if a phantom is used).

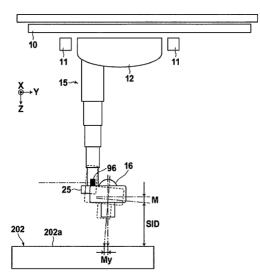

A61B 6/588

{Setting distance between source unit and detector unit}

Definition statement

This place covers:

Any means for setting the distance between source and detector unit or any use of a radiation diagnostic device involving the modifying said distance.

[US2010215152]

A61B 6/589

{Setting distance between source unit and patient}

Definition statement

This place covers:

Any means for setting the distance between source and patient or any use of a radiation diagnostic device involving the modifying said distance, e.g. to modify the magnification of an X-ray image.

A61B 7/00

Instruments for auscultation

Definition statement

This place covers:

Any instrument allowing to detect a sound generated within the body :

Diagnosis using ultrasonic, sonic or infrasonic waves (imaging of objects using sonar <u>G01S 15/00</u>)

Definition statement

This place covers:

Diagnostic equipment and/or methods which involve the use of ultrasonic, sonic or infrasonic waves.

A complete characterisation of the equipment or method requires the identification of both constructional and operational aspects according to the following rules.

Relationships with other classification places

Several subclasses, groups and subgroups provide for the different components or functional aspects constituting the devices for diagnosis using ultrasonic, sonic or infrasonic waves. It should be emphasized that documents describing these components should be classified in <u>A61B 8/00</u> only if they disclose a device for diagnosis using ultrasonic, sonic or infrasonic waves and the link between said components or functional aspects and the clinical application is not trivial.

Techniques for short-range imaging with ultrasound per se (both devices and methods) are classified under G01S 15/8906 and G01S 7/52017. These techniques should only be classified under A61B 8/00 when the link between the use of a particular technique and a clinical application is not obvious. The fact that the device is a medical diagnostic device is not a sufficient criterion for classifying in A61B 8/00 and not in G01S. As an example, a document disclosing an ultrasonic device adapted to calculate cardiac output using Doppler would be classified under A61B 8/00. If on the other hand the document discloses the sequence of pulses and their processing to obtain the Doppler measurements, then it should be classified under G01S 15/8906 or G01S 7/52017, even if the document mentions that the device is a diagnostic device. However, if there is a link between the particular implementation of the Doppler measurements and the clinical application, it should be classified in both A61B 8/00 and G01S 15/8906. Similarly, a modular medical diagnostic device wherein the probe can be exchanged to choose among a set of probes according to several clinical applications would be classified under A61B 8/00. However, a modular medical diagnostic device with exchangeable circuit boards to provide for easier upgrade would be classified under G01S. Only if the choice of a particular board was related to a clinical application should it be classified under A61B 8/00.

The same principle applies to other neighbouring fields such as, e.g. image processing (G06T). A document disclosing an algorithm for image enhancement should be classified under the corresponding subclass of G06T, even if the document mentions that the images are x-ray images. However, if there is a link between details of the algorithm and a particular clinical application, then the document should also be classified in the corresponding subclass of A61B 8/00. On the other hand, if is only mentioned that an algorithm for image enhancement is used but the disclosure deals mainly with details of the radiation diagnostic device, then it should only be classified in A61B 8/00.

Typically done by analysis of Doppler signals (<u>A61B 8/488</u>) or derived from ultrasonic images (<u>A61B 8/5223</u>).

A61B 8/065

{to determine blood output from the heart (in general A61B 5/029)}

References

Informative references

Determination of blood output from the heart in general	<u>A61B 5/029</u>
Heart imaging using ultrasound	<u>A61B 8/0883</u>

Detecting organic movements or changes, e.g. tumours, cysts, swellings (<u>A61B 8/02</u> - <u>A61B 8/06</u> take precedence)

Definition statement

This place covers:

Clinical application of the diagnosis device or method. Classification in the subgroups depends on the body part or organ which is to be diagnosed. Group <u>A61B 8/08</u> covers clinical applications not otherwise provided.

References

Limiting references

This place does not cover:

Measuring heart rate	<u>A61B 8/02</u>
Measuring blood pressure	<u>A61B 8/04</u>
Measuring blood flow	<u>A61B 8/06</u>

Informative references

Attention is drawn to the following places, which may be of interest for search:

Diagnosis by electrical, magnetic, pressure, light,sensing means, of particular parts of the body	<u>A61B 5/40</u> - <u>A61B 5/48</u>
Diagnosis by radiation devices of particular parts of the body	<u>A61B 6/50</u>
Extraction of a diagnostic parameter from ultrasound images	<u>A61B 8/5223</u>

A61B 8/0808

{for diagnosis of the brain}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Head diagnosis using radiation	<u>A61B 6/501</u>
--------------------------------	-------------------

A61B 8/0816

{using echo-encephalography}

Definition statement

This place covers:

Use of ultrasound to study the intracranial structures of the brain, wherein pulse of ultrasonic waves are beamed through the head and echoes reflected by midline structures are recorded and analysed.

Informative references

Attention is drawn to the following places, which may be of interest for search:

Diagnosis using electro-encephalography	A61B 5/369

Special rules of classification

A typical application is Trans-Cranial Doppler (TCD) imaging wherein a Doppler acquisition (<u>A61B 8/488</u>) allows evaluation of blood flow in a variety of intracranial arteries by applying ultrasound to areas or windows of the skull where the bone is relatively thin. The Doppler acquisition may be combined (<u>A61B 8/5246</u>) with a B-mode acquisition for locating the arteries (<u>A61B 8/085</u>).

A61B 8/0825

{for diagnosis of the breast, e.g. mammography}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Mammography by transillumination	<u>A61B 5/0091</u>
X-ray mammography	<u>A61B 6/502</u>
Patient support for imaging suspended breast	<u>A61B 8/406</u>
Detection of breast cancer using biopsy	<u>A61B 10/0041</u>

Special rules of classification

May involve the use of specific positioning means (A61B 8/40), e.g. compression means (A61B 8/403) or means for positioning the patient in prone position (A61B 8/406). May also be used in combination with biopsy needles (A61B 10/0041), wherein the needle is attached to an ultrasound probe (A61B 8/4455) and / or tracked by the probe (A61B 8/0841).

A61B 8/0833

{involving detecting or locating foreign bodies or organic structures}

Definition statement

This place covers:

Ultrasound diagnosis devices for localisation or tracking of organic structures (e.g. blood vessels) or foreign bodies, i.e. any kind of instrument or tissue which does not belong to the patient body by nature, e.g. tumour, implant, surgical instrument.

References

Informative references

Other imaging methods for locating foreign bodies	<u>A61B 5/06</u>
Locating foreign bodies using radiation	<u>A61B 6/12</u>
Surgical navigation systems	<u>A61B 34/20</u>

Informative references

Echogenic markers	A61B 90/39
	<u>//01D 00/00</u>

A61B 8/0841

{for locating instruments}

Definition statement

This place covers:

Instruments like biopsy needles, catheters.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Biopsy needles	A61B 10/0038- A61B 10/02
Surgical navigation systems	<u>A61B 34/20</u>

Special rules of classification

For example, a biopsy needle (A61B 10/0041) attached to an ultrasound probe (A61B 8/4455), wherein movement of the needle is tracked by the probe, would be classified here.

A61B 8/085

{for locating body or organic structures, e.g. tumours, calculi, blood vessels, nodules}

Definition statement

This place covers:

Detection of tumours, calculi, blood vessels, nodules for anatomical localization (e.g. detection of arteries as a support to Trans-cranial Doppler ultrasound) or diagnosis (evaluation of tumour size) purposes.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Locating particular structures in or on the body in general	<u>A61B 5/4887</u>
Processing for extracting a physiological parameter	<u>A61B 8/5223</u>

A61B 8/0866

{involving foetal diagnosis; pre-natal or peri-natal diagnosis of the baby}

Definition statement

This place covers:

Pregnancy detection, foetal ultrasound monitoring in general (e.g. foetal imaging or foetal heart rate determination).

Informative references

Attention is drawn to the following places, which may be of interest for search:

Foetal pulse or heart rate determination in general	<u>A61B 5/02411</u>
Pregnancy and labour monitoring	<u>A61B 5/4343</u>
Foetal pulse or heart rate determination using (ultra/infra) sonic waves	<u>A61B 8/02</u>

A61B 8/0875

{for diagnosis of bone (<u>A61B 5/4504</u> takes precedence)}

Definition statement

This place covers:

Includes both quantitative analysis of bone material and visualization of bone structure.

References

Limiting references

This place does not cover:

Detecting, measuring or recording devices for testing the shape, pattern,	A61B 5/103
colour, size or movement of the body or parts thereof, for diagnostic	
purposes	

Informative references

Attention is drawn to the following places, which may be of interest for search:

Bone monitoring in general	<u>A61B 5/4504</u>
Bone diagnosis using radiation	<u>A61B 6/505</u>
Measuring interfaces by ultrasound	<u>A61B 8/0858</u>

A61B 8/0883

{for diagnosis of the heart}

Definition statement

This place covers:

Includes both functional (e.g. heart-related physiological parameters) and anatomical (e.g. visualization of heart structure) analysis of the heart.

References

Informative references

Electrocardiography	<u>A61B 5/318</u>
X-ray heart imaging	<u>A61B 6/503</u>
Retrospective matching to a physiological signal	A61B 8/5284

Acquisition triggered by a physiological signal	<u>A61B 8/543</u>

Special rules of classification

Documents relating to heart rate ($\underline{A61B 8/02}$) and / or blood output monitoring ($\underline{A61B 8/065}$) should be classified here only if they describe other features pertaining to heart diagnosis. The same applies to documents relating to blood vessels analysis ($\underline{A61B 8/0891}$).

As the heart is a permanently moving organ, diagnostic devices or methods are often adapted to take into account the dynamic aspects. In particular, retrospective (A61B 8/5284) or prospective (A61B 8/543) synchronization to a physiological signal may be used to obtain motion-free images. M-mode (A61B 8/486) or Doppler signals (A61B 8/488) may be used to visualize motion.

A61B 8/0891

{for diagnosis of blood vessels}

Definition statement

This place covers:

Mainly related to the structural diagnosis of blood vessels (since blood flow assessment is dealt with in <u>A61B 8/06</u>).

References

Limiting references

This place does not cover:

Measuring blood flow	<u>A61B 8/06</u>

Informative references

Attention is drawn to the following places, which may be of interest for search:

Locating blood vessels	<u>A61B 5/489</u>
Radiation imaging using contrast agents	<u>A61B 6/481</u>
X-ray blood vessels imaging	<u>A61B 6/504</u>
Use of ultrasound contrast agents, e.g. microbubbles	<u>A61B 8/481</u>

Special rules of classification

Documents relating to heart, brain or blood flow analysis should be classified here only if they describe other features pertaining to blood vessels diagnosis.

Blood vessels diagnosis is often performed using Doppler signals (<u>A61B 8/488</u>), due to the high accuracy of this technique to visualize blood moving inside the vessels.

A typical example of blood vessel diagnosis is compression ultrasonography, wherein venous compression (A61B 8/403) is applied and B-mode images are acquired to detect and locate (A61B 8/085) deep vein thrombosis.

Eye inspection

Particular user interfaces in devices for short-range imaging with acoustic	<u>G01S 7/52084</u>
waves	

A61B 8/468

{allowing annotation or message recording}

Definition statement

This place covers:

All types of message recording associated with ultrasound imaging, e.g. annotation on image, sound recording.

A61B 8/469

{for selection of a region of interest}

Definition statement

This place covers:

Operator selection of region of interest or specific organs to be imaged, e.g. by touch screen, keyboard or switch. Also for definition of ROI after image analysis.

{Diagnostic techniques (A61B 8/13 takes precedence)}

Definition statement

This place covers:

Use of a particular imaging technique or protocol involving ultrasonic waves to obtain a specific image type.

References

Limiting references

This place does not cover:

Ultrasound tomography	<u>A61B 8/13</u>

A61B 8/481

{involving the use of contrast agent, e.g. microbubbles introduced into the bloodstream (analysis of echo signal exploiting properties of a contrast enhancer in devices for short-range imaging with acoustic waves <u>G01S 7/52039</u>)}

Definition statement

This place covers:

Use of substance, typically introduced into the body, which presents echogenic properties and can therefore be identified and / or tracked by the diagnostic device. Also for surgical instruments coated with echogenic materials to allow them to be tracked (A61B 8/0841).

Echographic preparations; ultrasound imaging preparation	<u>A61K 49/22</u>
Analysis of echo signal exploiting properties of a contrast enhancer in devices for short-range imaging with acoustic waves	<u>G01S 7/52039</u>

{involving the acquisition of a 3D volume of data}

Definition statement

This place covers:

Direct acquisition of a 3 dimensional image, e.g. a combination of B-mode and C-mode images.

[Smith et al., "Feasibility study: Real-time 3-D ultrasound imaging of the brain", Ultrasound in Medicine and Biology 30(10) (2004)1365-1371, XP004872070]

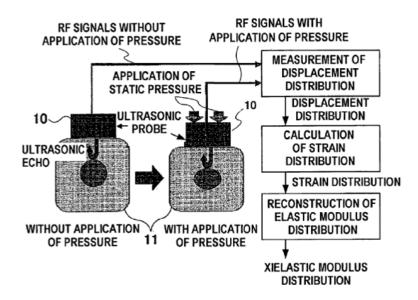

A61B 8/485

{involving measuring strain or elastic properties}

Definition statement

This place covers:

Imaging elastic properties (e.g. strain, elastic modulus, stiffness) of tissue by exciting the tissue (by direct mechanical means or ultrasonic radiation force) and detecting the resulting displacement, motion or deformation.

[EP1541090]

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Determining or monitoring contact between transducer and tissue	<u>A61B 8/429</u>
Extracting elastic properties in devices for short-range imaging with acoustic waves	<u>G01S 7/52042</u>

Special rules of classification

Detection of the effects of tissue excitation can be performed by Doppler measurement (<u>A61B 8/488</u>) or pulse-echo methods. Resultant information is usually displayed as images (called elastograms), representing the spatial distribution of strains, shear waves, elastic moduli or tissue stiffness. Elastograms are often fused with B-mode images (<u>A61B 8/5246</u>) to facilitate identification of the anatomical structures to which they relate.

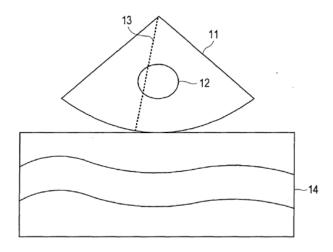

A61B 8/486

{involving arbitrary m-mode}

Definition statement

This place covers:

Motion-mode ultrasound wherein pulses are emitted in quick succession along the same path to visualize the spatial variation (e.g. movement) of a reflecting structure as a function of time. May be directly acquired or reconstructed from arbitrary line (straight, curved or polygonal) defined by a user on a B-mode image.

[EP1679038]

{involving Doppler signals}

Definition statement

This place covers:

Ultrasound imaging technique using the wavelength (or frequency) shift of ultrasound waves reflected from moving structures. Typically used for the diagnosis of dynamic structures function, e.g. heart movement or blood flow.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

For measuring pulse or heart rate	<u>A61B 8/02</u>
For measuring blood flow	<u>A61B 8/06</u>
For heart diagnosis	<u>A61B 8/0883</u>
For blood vessels diagnosis	<u>A61B 8/0891</u>

Special rules of classification

Often fused with B-mode images (<u>A61B 8/5246</u>) to facilitate identification of the anatomical structures to which Doppler signals relate.

A61B 8/52

{Devices using data or image processing specially adapted for diagnosis using ultrasonic, sonic or infrasonic waves (image processing per se <u>G06T</u>)}

Definition statement

This place covers:

Ultrasound diagnosis devices involving any kind of data or image processing for enhancement purposes, e.g. artefacts reduction of resolution improvement.

References

Limiting references

This place does not cover:

Image processing per se	<u>G06T</u>
-------------------------	-------------

Special rules of classification

Documents should be classified in these subgroups only if:

- · they explicitly relate to ultrasound diagnosis devices AND
- they relate to details of data or image processing.

Image processing alone should not be classified in <u>A61B 8/00</u>, except when it consists in straightforward steps (e.g. thresholding, filtering) directed to an explicit diagnostic application.

{involving processing of raw data to produce diagnostic data, e.g. for generating an image (reconstruction <u>G06T 11/00</u>)}

Definition statement

This place covers:

Pre-processing of data output from sensor to derive data usable for diagnostic purpose, e.g. filtering, phase modification.

A61B 8/5215

{involving processing of medical diagnostic data}

Definition statement

This place covers: Any kind of post-acquisition image processing

A61B 8/5223

{for extracting a diagnostic or physiological parameter from medical diagnostic data (for algorithms to analyse biomedical images <u>G06T 7/0012</u>)}

Definition statement

This place covers:

Acquired data is used to derive a particular diagnostic index, e.g. tumour size.

References

Limiting references

This place does not cover:

Algorithms for biomedical image analysis	<u>G06T 7/0012</u>

Ultrasound diagnosis devices adapted to display 3D data	<u>A61B 8/466</u>
---	-------------------

{for combining image data of patient, e.g. merging several images from different acquisition modes into one image (for image registration algorithms <u>G06T 7/30</u>)}

Definition statement

This place covers:

Means for combining images of one or several imaging modalities, e.g. merging of contiguous subimages to obtain a larger image or multi-modality image registration.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Determination of transform parameters for the alignment of images, i.e.	<u>G06T 7/30</u>
image registration	

A61B 8/5246

{combining images from the same or different imaging techniques, e.g. color Doppler and B-mode}

Definition statement

This place covers:

Combining images of the patient obtained by a diagnostic technique classified under A61B 8/00.

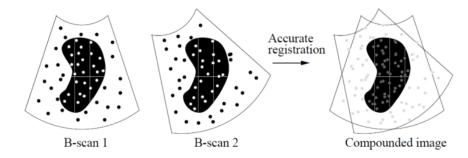

A61B 8/5253

{combining overlapping images, e.g. spatial compounding}

Definition statement

This place covers:

Compilation of multiple views acquired at different angles.

[Rohling, PhD Thesis : 3D Freehand Ultrasound: Reconstruction and spatial compounding]

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

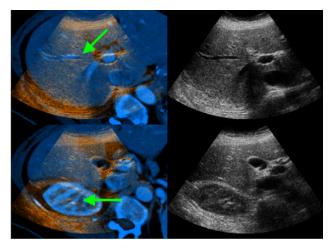

Spatial compounding for short range imaging systems	<u>G01S 15/8995</u>

A61B 8/5261

{combining images from different diagnostic modalities, e.g. ultrasound and X-ray}

Definition statement

This place covers:

[Wein et al., "Automatic CT-ultrasound registration for diagnostic imaging and image-guided intervention", Medical Image Analysis, Volume 12, Issue 5, October 2008, Pages 577-585,]

A61B 8/5269

{involving detection or reduction of artifacts (for image enhancement algorithms <u>G06T 5/00</u>)}

References

Informative references

{due to motion}

Definition statement

This place covers:

Data or image processing for artefact reduction wherein the artefacts are caused by motion.

A61B 8/5284

{involving retrospective matching to a physiological signal}

Definition statement

This place covers:

Arranging or processing an image or a plurality of images after acquisition for synchronization purpose. Includes synchronization based on an independently acquired signal (e.g. ECG) or on a feature derived from the image(s).

References

Limiting references

This place does not cover:

Synchronizing the ultrasound measurement to a physiological event	<u>A61B 8/543</u>
Retrospective scan-line arrangements in devices for short-range imaging using acoustic waves	<u>G01S 7/52088</u>

A61B 8/5292

{using additional data, e.g. patient information, image labeling, acquisition parameters}

Definition statement

This place covers:

Processing of data using non measured data, such as patient name and age, or image identification. Non measured data can be typically found in the header of a digital image file (e.g. a DICOM header).

References

Informative references

ICT specially adapted for the handling or processing of patient-related	<u>G16H 10/00</u>
medical or healthcare data	

{Control of the diagnostic device}

Definition statement

This place covers:

Ultrasound diagnosis devices comprising means for adapting the operation of the device during acquisition.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

ICT specially adapted for the operation of medical equipment or devices	<u>G16H 40/60</u>

A61B 8/543

{involving acquisition triggered by a physiological signal}

Definition statement

This place covers:

Acquisition control wherein a signal of physiological origin (heart rate, breathing rate) is used to initiate acquisition.

References

Limiting references

This place does not cover:

Retrospective matching to a physiological signal	<u>A61B 8/5284</u>

acoustic waves	

A61B 8/546

{involving monitoring or regulation of device temperature}

Definition statement

This place covers:

Any means for controlling or assessing the temperature of the diagnosis device, e.g. cooling means for preventing skin burn

{Details of data transmission or power supply}

Definition statement

This place covers:

Ultrasound diagnosis devices comprising:

- means for transmitting or receiving data to or from an external device or between components of the device, e.g. image transmission to a remote physician workstation for diagnosis; or
- means for supplying power to any component of the device, e.g. between stationary and moving parts.

Other methods or instruments for diagnosis, e.g. instruments for taking a cell sample, for biopsy, for vaccination diagnosis (vaccination prophylaxis, vaccination therapy A61B 17/20); Sex determination; Ovulation-period determination (menstruation tables G06C 3/00); Throat striking implements

Definition statement

This place covers: instruments for taking a sample from a body:

A61B 10/00 (continued)

Definition statement

- devices for taking fluid samples or cell samples;
- biopsy devices;
- devices for taking faeces samples;
- containers for storing such samples;
- devices for determining ovulation;
- devices for detection of breast cancer;
- vaccination diagnosis (allergy test patches);
- devices for sex determination

A61B 17/1646

{with sealing means}

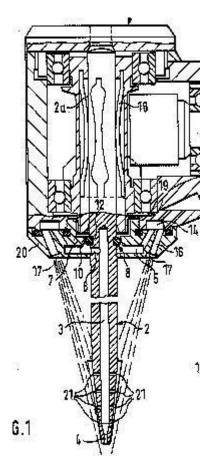

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/1646

Examples:

US4975056

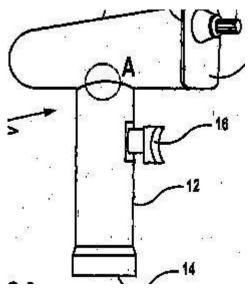

"TI - Medical, especially dental handpiece

AB - A medical handpiece, and especially a dental handpiece, including a drivable worktool or implement which is rotatably supported with its shaft at one end of the handpiece and which projects from this handpiece end with its operating end. The implement possesses an elongate blind bore-like passageway which communicates with the outside at the work end of the implement through the intermediary of a discharge opening, and with which there is associated a supply line arranged within the handpiece for the infeed of cooling media to at least one radial through-opening of the implement which stands in communication with the elongate passageway; whereby the at least one radial through-opening is sealed with respect to the interior of the handpiece through the intermediary of a seal which encompassing the shaft of the implement and contacts against a wall portion of the handpiece."

A61B 17/1646 (continued)

Definition statement

DE20202724U:

"A surgical tool (10) has a fluid connection into the motor housing (18) with thermally operated sintered, ceramic or porous plastic sealing membrane such as Goretex or mechanical valve to close the link to liquids and open it to the hot steam used for sterilization."

PN - US5823774 A 19981020

AB - "A device is disclosed that dynamically seals the collet of a high-speed surgical or dental drill from the ingress of contaminating substances with which the tool or collet of the drill comes into contact, such as blood, saliva, saline, tissue, bone chips, and tooth particles. The dynamic seal comprises an impeller and a bearing that rotatably supports both the impeller and a surgical tool; furthermore, the seal may be disposed within a burguard that is mounted on the distal end of a surgical drill. The spinning impeller has a disc portion that imparts a centrifugal force to the flow of contaminating substances and thereby pumps the flow entering through the tool opening radially outward through discharge holes in the burguard housing. The dynamic seal further includes an O-ring for sealing against the tool shaft and blocking the contaminating substances from continuing up the tool bore and into the collet of the surgical drill. A backring retains the O-ring in place."

US-A-5823774 Dynamically sealed surgical drill

" A device is disclosed that dynamically seals the collet of a high-speed surgical or dental drill from the ingress of contaminating substances with which the tool or collet of the drill comes into contact, such as blood, saliva, saline, tissue, bone chips, and tooth particles."

Means other than saws for removing bone from the acetabulum only	<u>A61B 17/1666</u>
Means other than saws for removing bone from the upper femur only	<u>A61B 17/1668</u>

A61B 17/1666

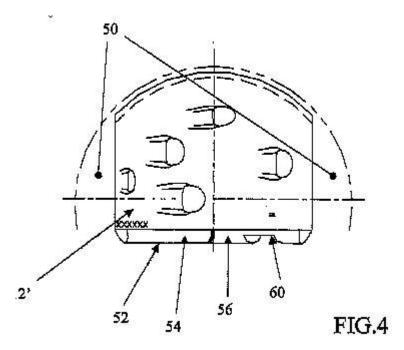

{for the acetabulum}

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/1666</u>

Example (WO03059178):

"CONTOURED REAMER TEETH- An acetabular reamer (10') for cutting a required cut shape"

A61B 17/1668

{for the upper femur (<u>A61B 17/164</u> takes precedence)}

Definition statement

This place covers:

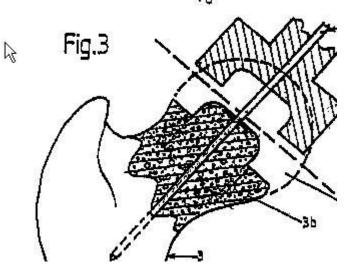

Illustrative example of subject matter classified in A61B 17/1668

Examples:

WO0062718

WO 00/62718

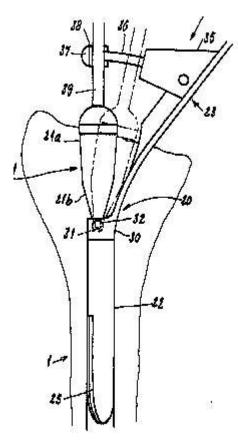

3/6

A61B 17/1668 (continued)

Definition statement

FR2802080

References

Limiting references

This place does not cover:

Intramedullary reamers

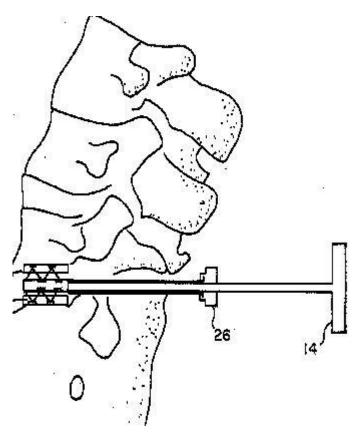

A61B 17/164

{for the spine}

Definition statement

This place covers:

Devices for making holes in vertebral bodies (e.g. for pedicle screws, or along the axis of the spine),or, as in the example below (US6224604), for preparing an intervertebral space by machining the vertebral end faces:

Guides for spinal drills	<u>A61B 17/1757</u>

A61B 17/1673

{for the jaw}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/1673

A61B 17/1673 (continued)

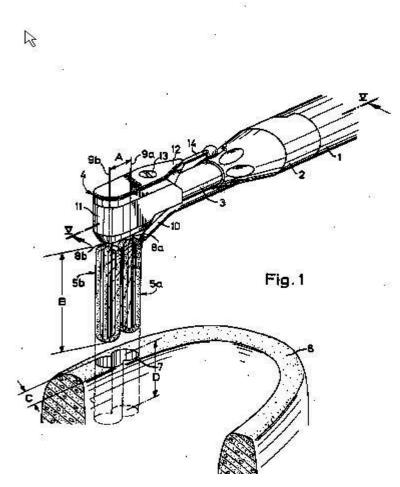

Definition statement

Example:

U.S. Patent	Apr. 15, 1980
-------------	---------------

5, 1980 Sheet 1 of 27

4,197,645

A61B 17/1675

{for the knee}

Definition statement

This place covers:

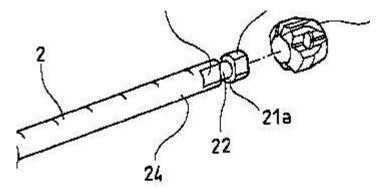

Illustrative example of subject matter classified in A61B 17/1675

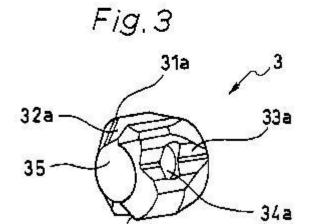

Examples:

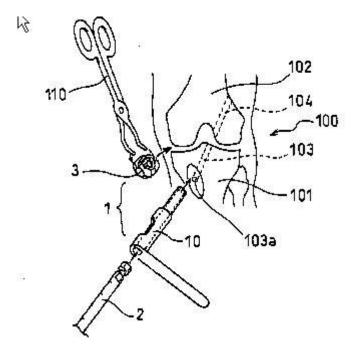

A61B 17/1675 (continued)

Definition statement

US6015411

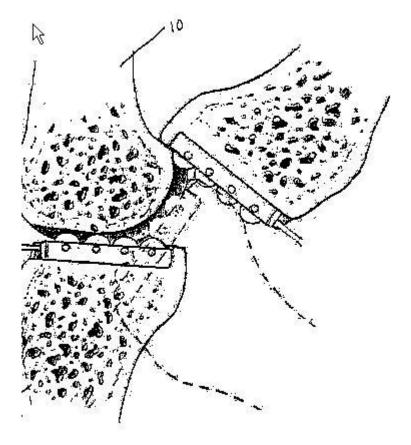

A61B 17/1675 (continued)

Definition statement

US6482289

"An apparatus for sculpting the articular surface of a first bone that normally articulates in a predetermined manner with a second bone, the apparatus comprising: a bone-sculpting tool; a mount attachable to the second bone for mounting the tool in position to sculpt the articular surface as the second bone is articulated in the predetermined manner with respect to the first bone."

A61B 17/1677

{for the patella}

Definition statement

This place covers:

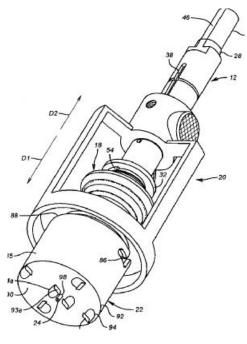

Illustrative example of subject matter classified in A61B 17/1677

Examples:

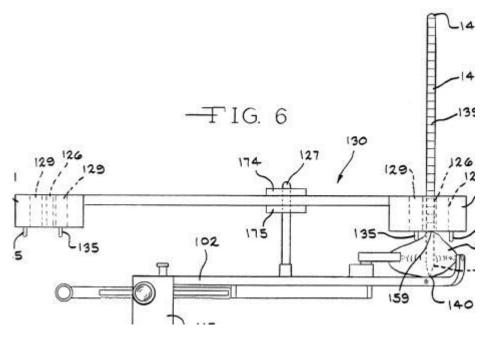

A61B 17/1677 (continued)

Definition statement

US6277121

US2003163137

A61B 17/1695

{Trepans or craniotomes, i.e. specially adapted for drilling thin bones such as the skull}

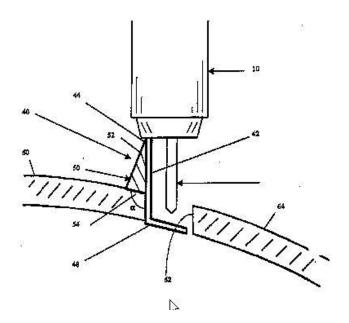

Definition statement

This place covers:

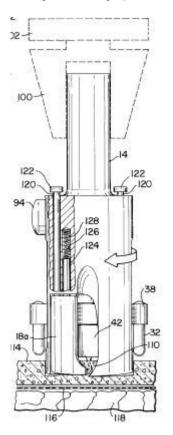

Illustrative examples of subject matter classified in A61B 17/1695

Examples:

EP1245194 (dura guard for craniotome)

US5876405 "The perforator of this invention includes safety mechanism that prevents penetration of the perforator when the drill bit has completed the cutting operation and the resistive load is removed. The perforator cuts the hole by an annular slot leaving a plug of the bone structure that is removed and returned to the original hole for re-filling the hole which aids in the healing process. A clutch may be provided that decouples the drill bit from the drive motor upon sensing a void in the drill passage during the drilling operation:"

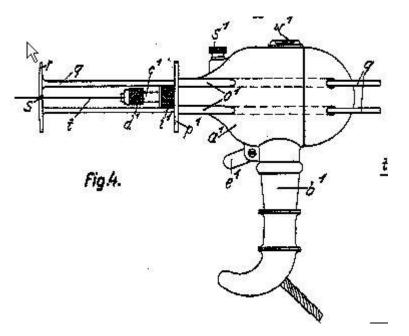

{specially adapted for wire insertion}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/1697

Example (GB353706):

A61B 17/17

Guides {or aligning means} for drills {, mills, pins or wires}

Orthopaedic methods or devices for non-surgical treatment of bones or	A61F 5/00
joints	

Special rules of classification

Documents concerning exclusively surgical methods are classified only in this group.

Surgical instruments or devices are classified only in the relevant subgroups of <u>A61B 17/56</u>.

{Implants for placement in joint gaps without restricting joint motion, e.g. to reduce arthritic pain}

Definition statement

This place covers:

These are implants which do not restrict the relative movement of the bones and are therefore not in any way fixators.

A61B 17/58

for osteosynthesis, e.g. bone plates, screws {, setting implements} or the like (<u>A61B 17/14</u>, <u>A61B 17/16</u> take precedence)

Devices for fastening or securing constructional elements or machine parts together, e.g. nails, bolts, clamps, clips	<u>F16B</u>

A61B 17/70

Spinal positioners or stabilisers {; Bone stabilisers comprising fluid filler in an implant}

Definition statement

This place covers:

- Devices embedded in the vertebrae, e.g. US2009005816
- Devices placed at least partially in the disc space e.g.FR2799638, US2006224241
- Staple-like devices, e.g. US2009270917
- Vertebra or disc reinforcements other than annulus repair patches, e.g. US2008125778
- Longitudinal elements with bone anchors other than screws, hooks or wires, e.g. WO2009004625
- Nerve or anti-scarring shields, e.g. DE102008020111
- Extra-vertebral devices combined with fusion cages or disc prostheses, e.g. W00010473
- Vertebra or disc filler material, e.g. US6251139, US2008172058

Relationships with other classification places

Because spinal fusion cages generally cannot be removed without causing failure of the spinal column they are considered equivalent to prostheses and are hence classified in <u>A61F</u>, specifically <u>A61F 2/4455</u>.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Means for repairing the disc annulus	A61F 2002/4435
Orthopaedic corsets	<u>A61F 5/02</u>

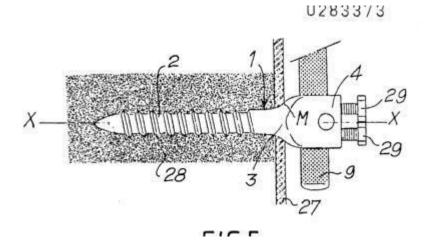

A61B 17/7001

{Screws or hooks combined with longitudinal elements which do not contact vertebrae (<u>A61B 17/7058</u> takes precedence)}

Definition statement

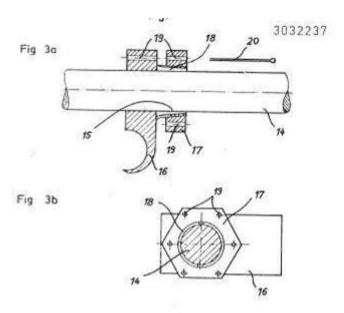

This place covers:

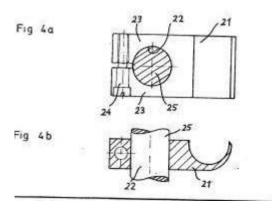

"longitudinal" means designed to be placed approximately along the axis of the spine from one vertebra to another. Typical examples:

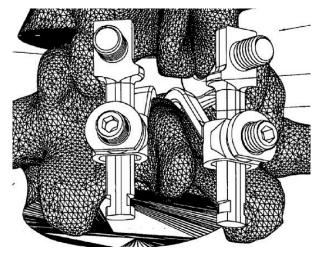

A61B 17/7001 (continued)

Definition statement

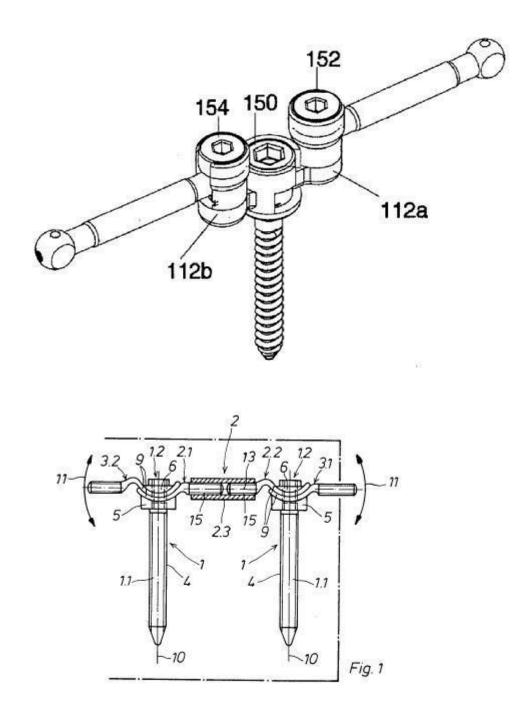

573

A61B 17/7001 (continued)

Definition statement

<u>A61B 17/7001</u> also includes devices where the orientation of the longitudinal element relative to the anchors can be modified before use, but is fixed in the implanted state, e.g.

The last example above is also in <u>A61B 17/7014</u> because the length of the longitudinal element can be adjusted.

References

Limiting references

Plates mounted on top of bone anchor heads or shoulders <u>A61B 17/7058</u>	
---	--

{Longitudinal elements, e.g. rods}

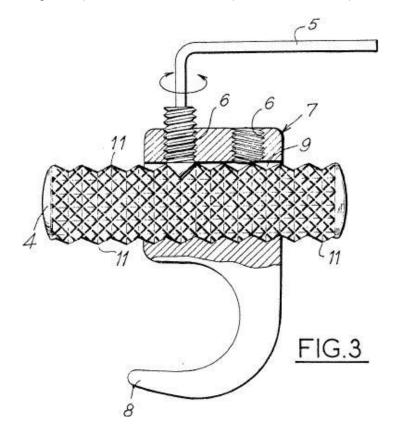

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7002

Example:

this document is classified here (as well as in <u>A61B 17/7001</u> because of rod-to-hook fixation arrangement) because of the surface (in this case knurled) of the longitudinal rod:

A further example:

" Tige de liaison pour redresser les deformations du rachis, caracterisee en ce qu'elle est realisee en un materiau a memoire de forme et en ce qu'elle est pourvue d' au moins un canal de circulation (2) pour un fluide calorifique ou frigorifique afin de modifier sa temperature et par suite, sa rigidite."

A61B 17/7004

{with a cross-section which varies along its length (<u>A61B 17/7019</u> takes precedence)}

Definition statement

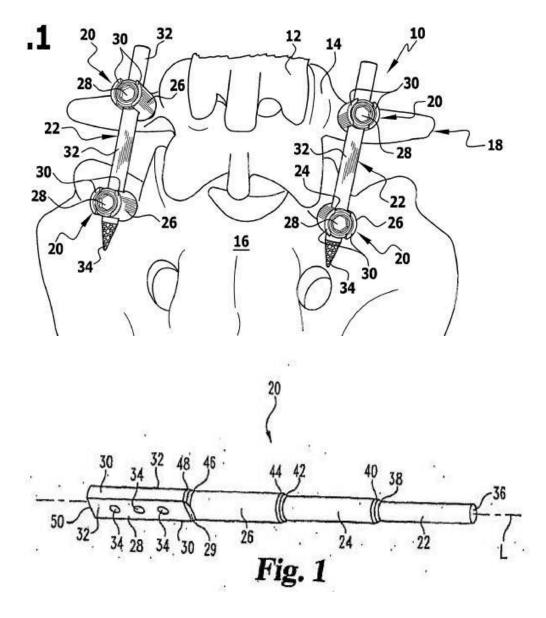

This place covers:

Illustrative example of subject matter classified in A61B 17/7004

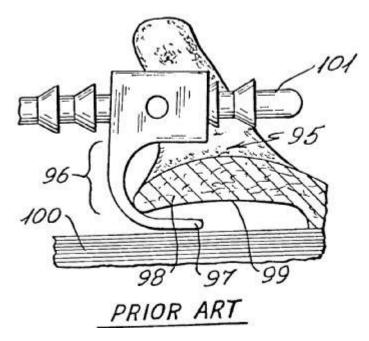

A61B 17/7004 (continued)

Definition statement

Examples:

The example below shows a typical Harrington rod, classified here because of its ratcheting annular projections:

Adjustable length longitudinal elements	<u>A61B 17/7014</u>
---	---------------------

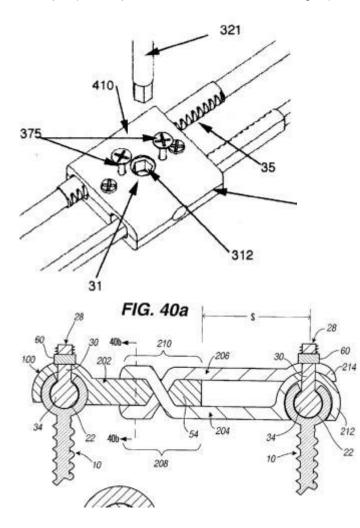

A61B 17/7014

{with means for adjusting the distance between two screws or hooks}

Definition statement

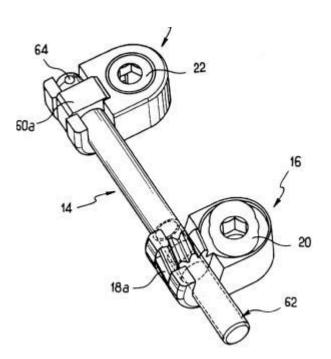

This place covers:

The means for adjusting the distance either adjust the length of the longitudinal element (first two examples), or displace the screws or hooks along it (third example):

A61B 17/7014 (continued)

Definition statement

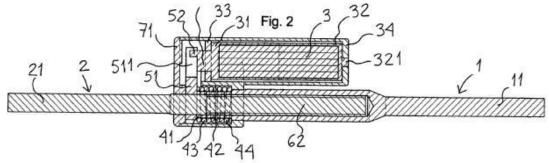

{electric or electromagnetic means}

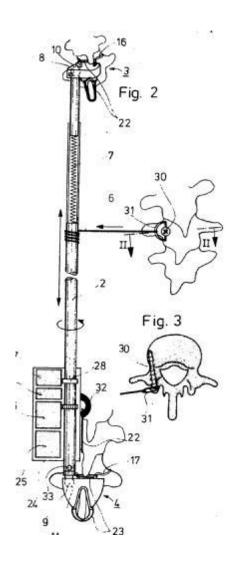

Definition statement

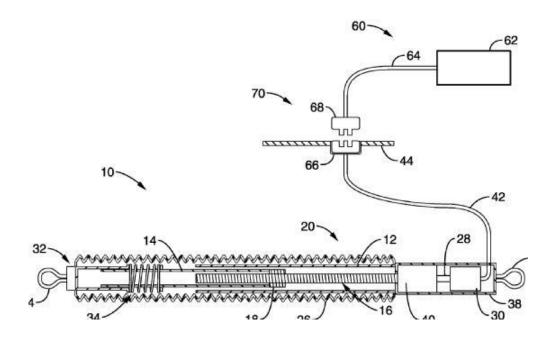

This place covers:

Illustrative example of subject matter classified in A61B 17/7016

Examples:

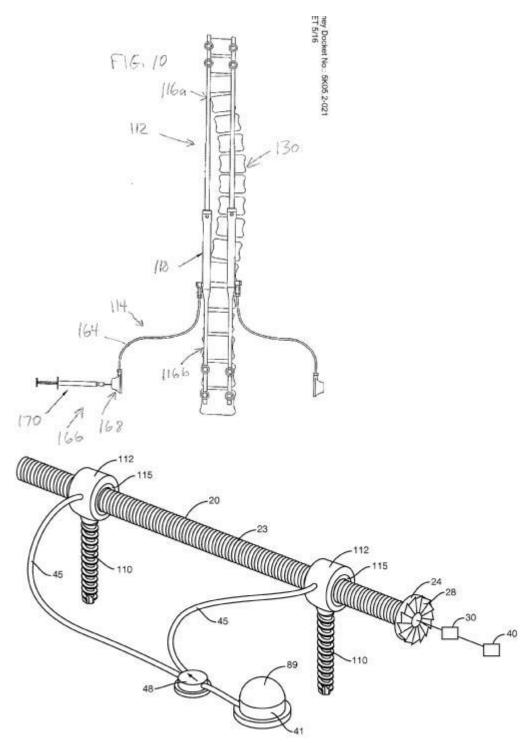

{pneumatic or hydraulic means}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7017

{Longitudinal elements having flexible parts, or parts connected together, such that after implantation the elements can move relative to each other}

References

Limiting references

This place does not cover:

<u>A61B 17/7035</u>

A61B 17/702

{having a core or insert, and a sleeve, whereby a screw or hook can move along the core or in the sleeve}

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Sleeve	Anything surrounding a core or insert, e.g. a coil spring
--------	---

A61B 17/7032

{Screws or hooks with U-shaped head or back through which longitudinal rods pass}

Definition statement

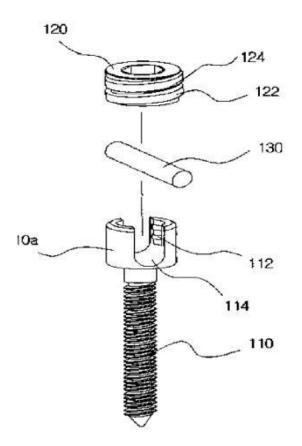

This place covers:

Illustrative example of subject matter classified in A61B 17/7032

A61B 17/7032 (continued)

Definition statement

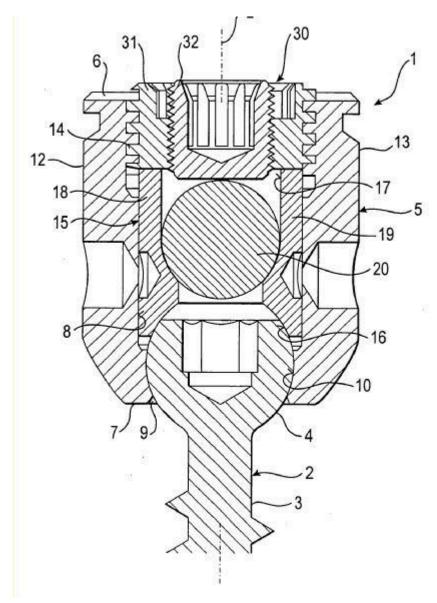

A typical example:

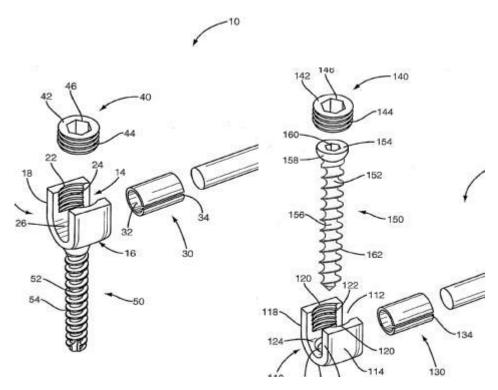

[Fig. 2]

Definition statement

The device below is classified in <u>A61B 17/7032</u> as well as <u>A61B 17/7035</u>, because the feature of having both inner (32) and outer (31) locking screws is unrelated to the device as a whole being polyaxial, and is hence "invention-type" information for any U-shaped head screw:

Classified in <u>A61B 17/7032</u> for left-hand embodiment and in <u>A61B 17/7035</u> for right-hand:

A61B 17/7034

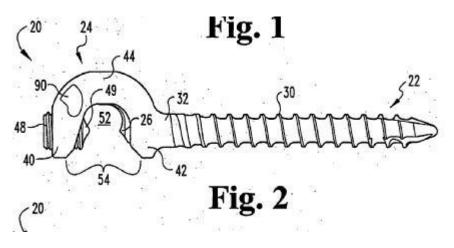

{characterised by a lateral opening}

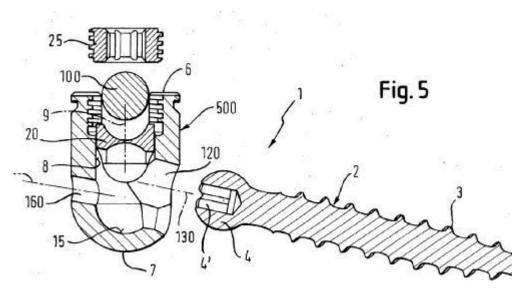

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7034

Examples (the second of which is polyaxial):

{Screws or hooks, wherein a rod-clamping part and a bone-anchoring part can pivot relative to each other}

Definition statement

This place covers:

Rotation of the bone-anchoring part about its own axis is not considered to be pivoting.

Note that the longitudinal member must be a rod (i.e. without openings, at least in the vicinity of the bone anchors) for a document to get this class.

This group includes so-called polyaxial screws/hooks, where in at least some embodiments the connection between the rod-clamping part and the rod can be locked separately from the connection

between the rod-clamping part and the bone-anchoring part (otherwise classification would be in <u>A61B 17/7037</u>), such as this example:

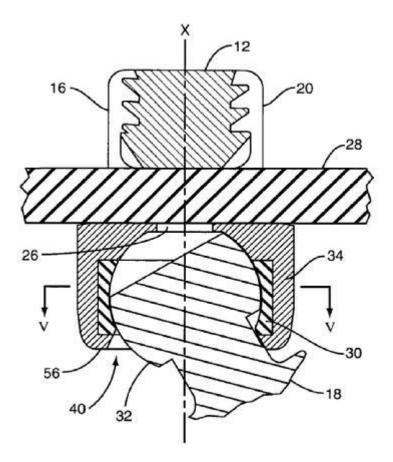

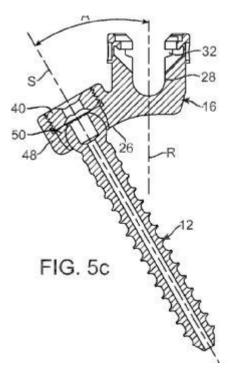

FIG. 3

The group also includes devices in which the rod cannot lie on the axis of the bone-anchoring part (and which are therefore also classified in <u>A61B 17/7041</u>), i.e. ones not referred to as polyaxial, such as this:

A61B 17/7037

{wherein pivoting is blocked when the rod is clamped}

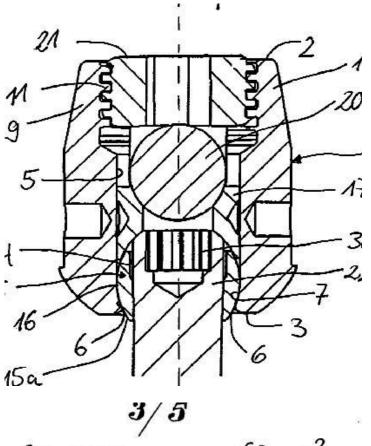

Definition statement

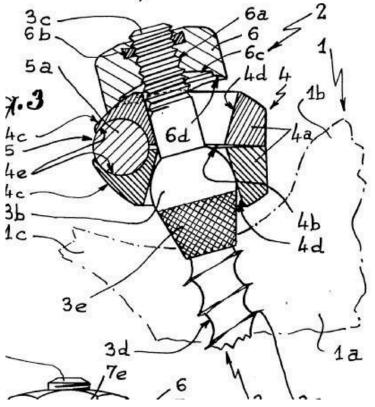

This place covers: Illustrative example of subject matter classified in <u>A61B 17/7035</u>

A61B 17/7037 (continued)

Definition statement

Examples:

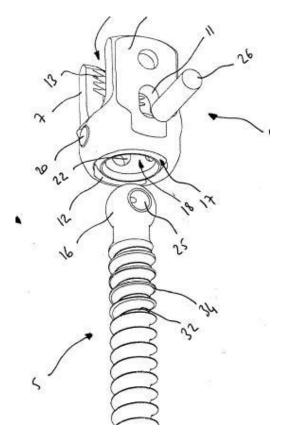

{to a different extent in different directions, e.g. within one plane only}

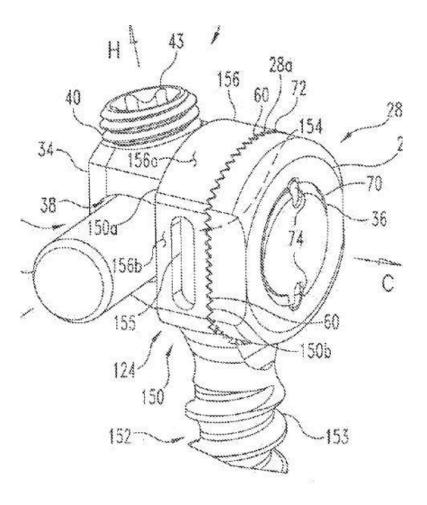

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7038

Examples (in the first, the bone-anchoring part 16 pivots about pin 26, and hence only in one plane):

{the longitudinal element passing through a ball-joint in the screw head}

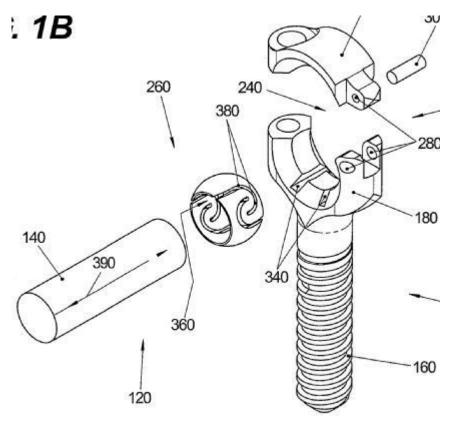

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/704</u>

A61B 17/704 (continued)

Definition statement

Example:

A61B 17/7041

{with single longitudinal rod offset laterally from single row of screws or hooks (<u>A61B 17/7044</u> takes precedence)}

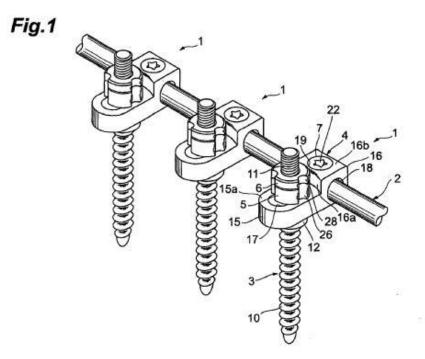

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7041

Definition statement

Example:

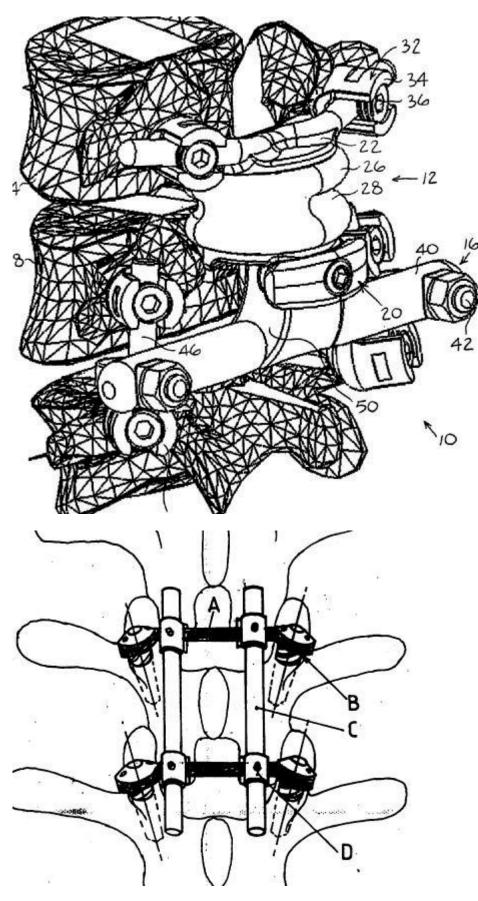

A61B 17/7043

{with a longitudinal element fixed to one or more transverse elements which connect multiple screws or hooks}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7043

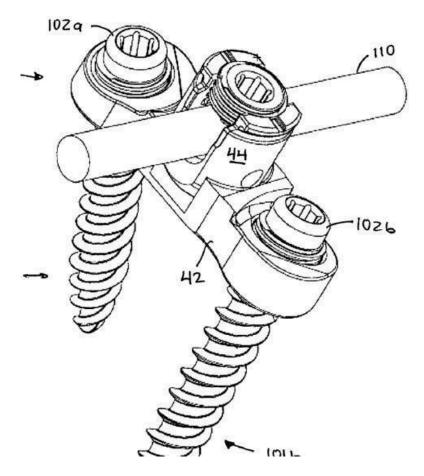

Examples (note that, as in the second example, there may be more than one longitudinal element):

{also having plates, staples or washers bearing on the vertebrae}

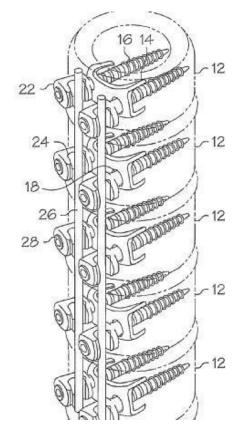

Definition statement

This place covers:

The group contains devices with bone plates, staples or washers mounted to the vertebrae by screws, wherein the rod is mounted to the plates, staples or washers, not to the screws, as in this example:

Also it contains devices where the rod is mounted to the screws as in this example:

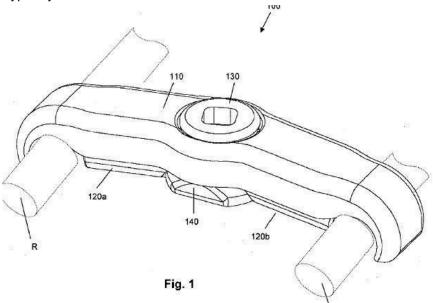

A61B 17/7049

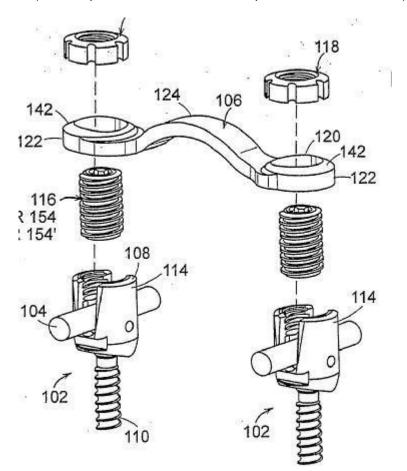

{Connectors, not bearing on the vertebrae, for linking longitudinal elements together (A61B 17/7055, A61B 17/7053, A61B 17/7019 take precedence)}

Definition statement

This place covers:

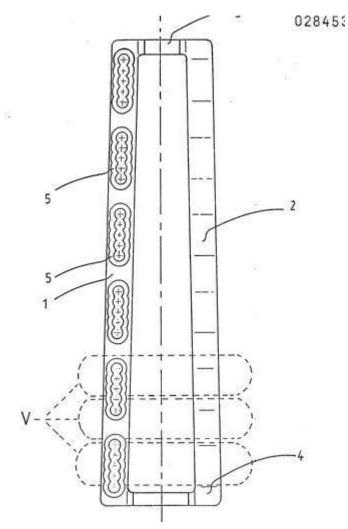

Typically the devices look like this -

or (an example where connection takes place at the screw heads)

Also classified here are devices where the connectors and longitudinal elements are integral parts of a frame:

And this is an example of a document classified here wherein the longitudinal elements have a crossing at which they are connected (300 is an embodiment of 100):

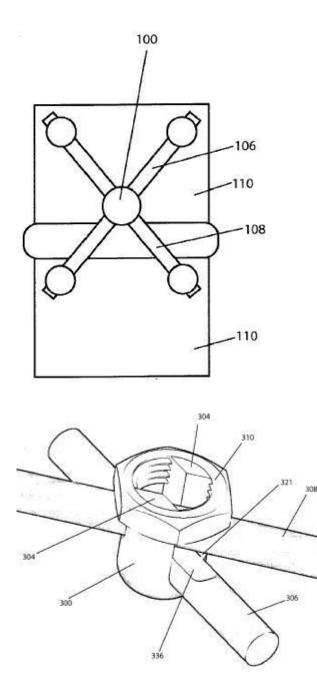

FIGURE 6

References

Limiting references

This place does not cover:

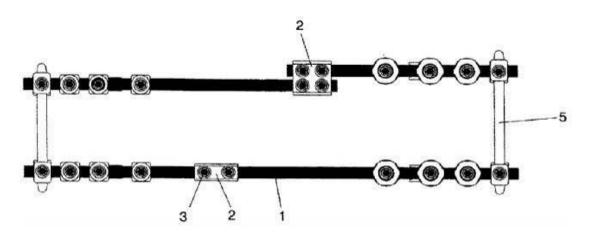

Longitudinal elements connected together such that in use they can move relative to each other	<u>A61B 17/7019</u>
Positioners or stabilisers attached by wires, straps, sutures or cables	<u>A61B 17/7053</u>
Positioners or stabilisers attached to sacrum, pelvis or skull	<u>A61B 17/7055</u>

{for linking adjacent ends of longitudinal elements}

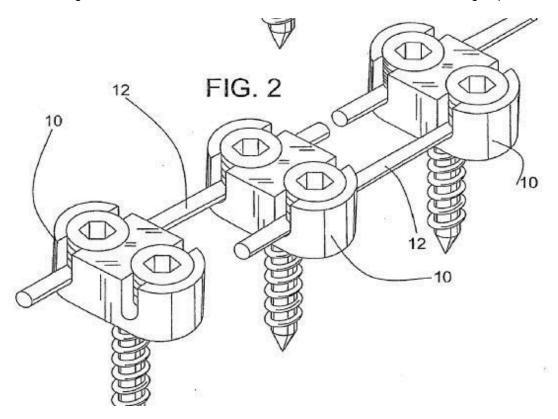

Definition statement

This place covers:

The ends may be aligned (the lower connector in this example) or side-by-side (the upper connector in this example):

Also classified here are arrangements such as the example below, in which bone anchors which can accommodate two rods are shown being used to link two rods near their ends, even though the bone anchors themselves are no different from those which are used with multiple rods extending in parallel the entire length of the device and which are classified in <u>A61B 17/7001</u> and subgroups:

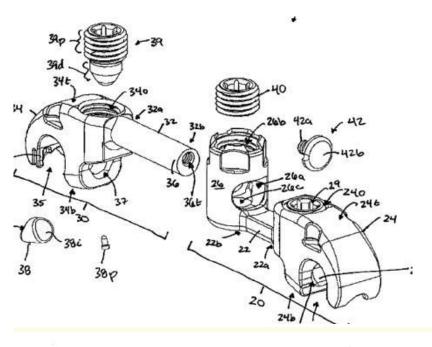

{of variable angle or length}

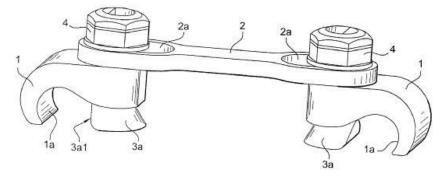

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7052

Examples:

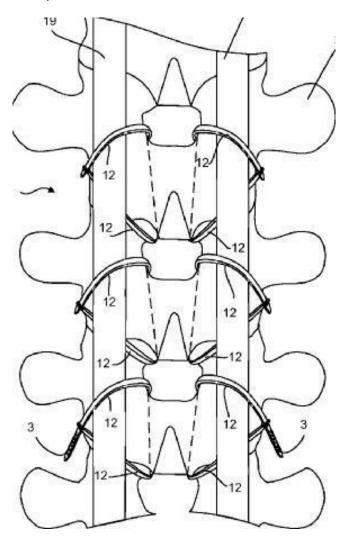

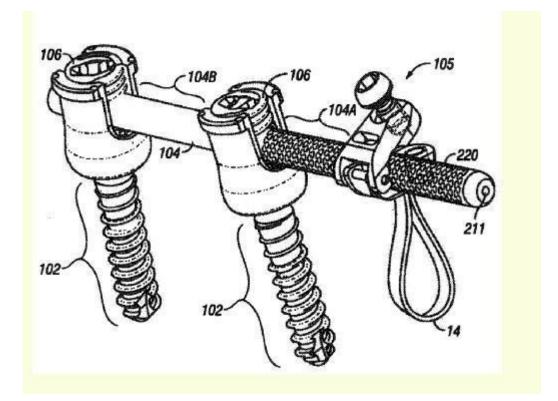

(variable length is provided in the above example by screws 4 being able to translate in elongated holes 2a)

{with parts attached to bones or to each other by flexible wires, straps, sutures or cables}

Definition statement

This place covers: Examples:

{connected to sacrum, pelvis or skull}

Definition statement

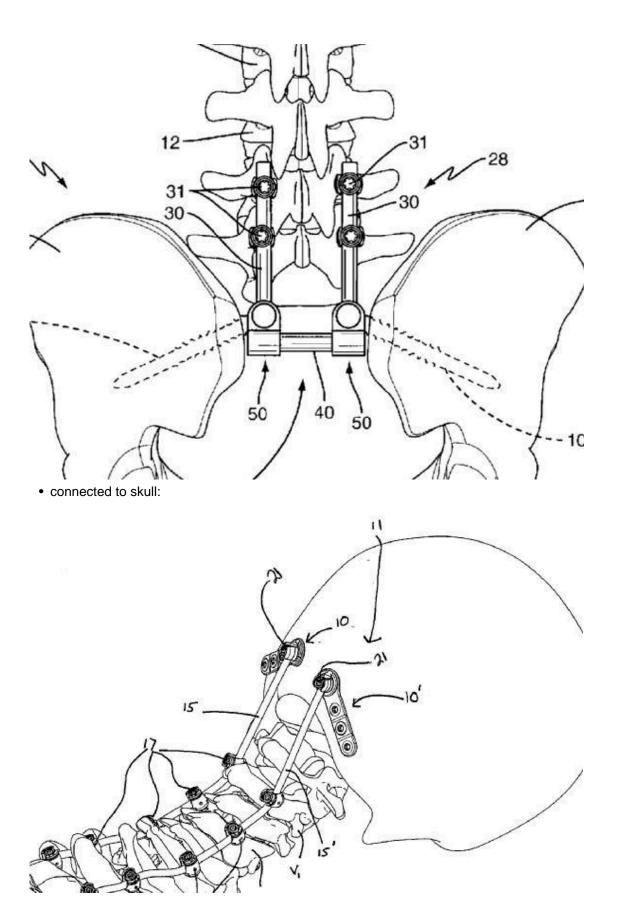

This place covers:

Illustrative example of subject matter classified in A61B 17/7055

Examples:

• connected to sacrum/pelvis:

Definition statement

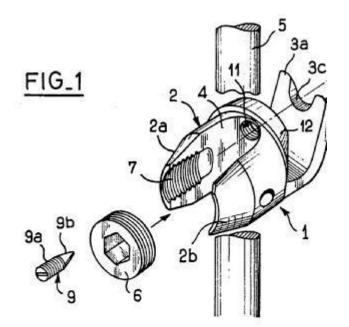

{Hooks with specially-designed bone-contacting part}

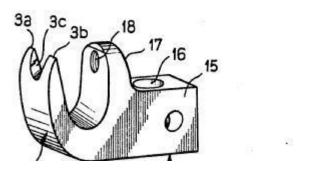

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7056

Example (notch 3c is the novel feature of the bone-contacting part, which is the claw-like portion):

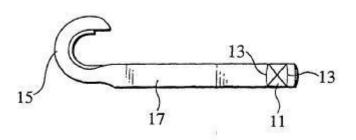

F

Note that "bone-contacting part" is interpreted to mean any part of the hook other than features for clamping it to a longitudinal element.

110.211

A61B 17/7058

{Plates mounted on top of bone anchor heads or shoulders}

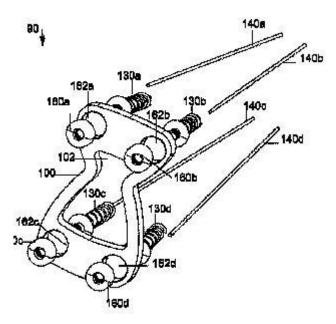

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7058

Examples:

Cortical plates i.e. plates bearing directly on bone	<u>A61B 17/7059</u>

A61B 17/7059

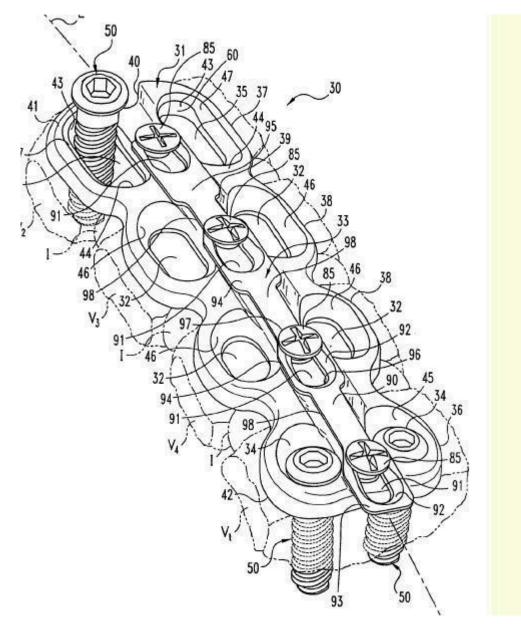

{Cortical plates (A61B 17/7007, A61B 17/7058 take precedence)}

Definition statement

This place covers:

"cortical" means applied to the surface of the bone (the cortex is the dense face layer of bones).

Example (one which is also classified in <u>A61B 17/8042</u>, because of its screw anti-backout means):

References

Limiting references

This place does not cover:

Screw or hooks combined with longitudinal elements specially adapted to fit around their heads	<u>A61B 17/7007</u>
Plates mounted on top of bone anchor heads or shoulders	<u>A61B 17/7058</u>

Informative references

Attention is drawn to the following places, which may be of interest for search:

Construction aspects of cortical plates	<u>A61B 17/80</u>
Plates specially adapted for the ribs or sternum	A61B 17/8076

{for stabilising vertebrae or discs by improving the condition of their tissues, e.g. using implanted medication or fluid exchange (intraosseous injection devices <u>A61B 17/3472</u>)}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7061

For example:

• a fluid conduit is provided (101):

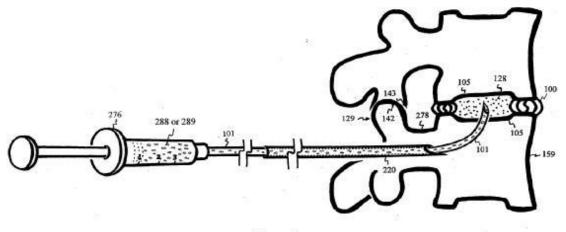

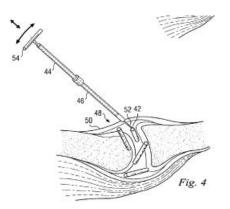

Figure 7

• medication pellets 42 are implanted:

Intraosseous injection devices	<u>A61B 17/3472</u>
Prostheses with pharmaceutical reservoir	A61F 2002/3068

{Devices acting on, attached to, or simulating the effect of, vertebral processes, vertebral facets or ribs (rib fixation devices <u>A61B 17/8076</u>); Tools for such devices}

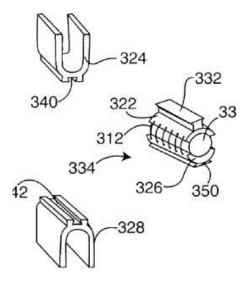

Definition statement

This place covers:

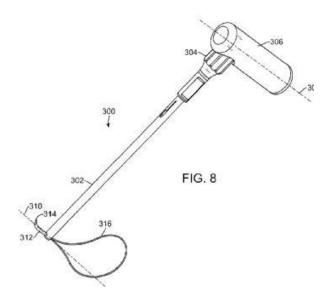

Spinous processes as in this example:

An example where the device is not a simple wedge but two brackets and a hinge:

This shows an example of a tool classified here (it applies suture loop 316 to the spinous processes):

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

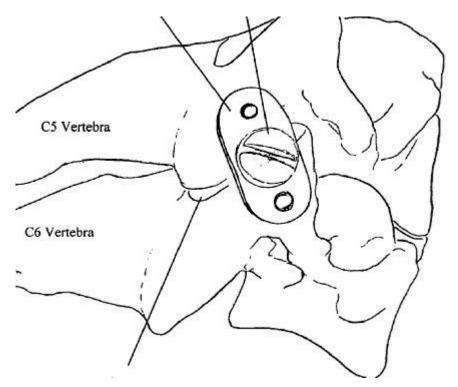

Rib fixation plates	A61B 17/8076

{Devices acting on, attached to, or simulating the effect of, vertebral facets; Tools therefor}

Definition statement

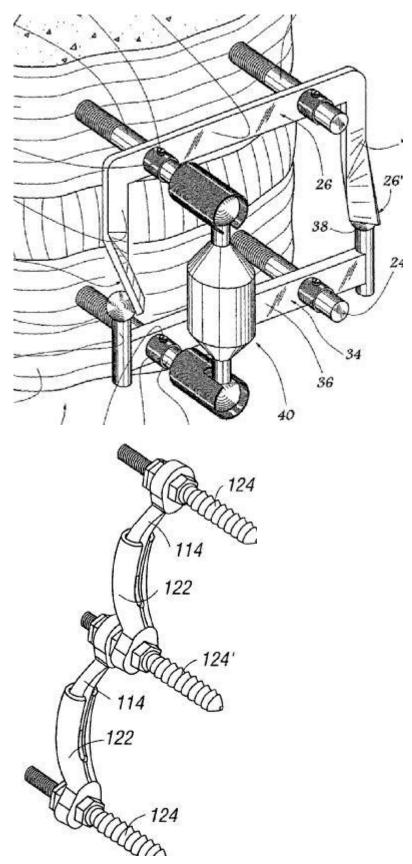

This place covers:

This group comprises two sorts of devices: devices which immobilise the facet joint (also known as the apophyseal or zygapophyseal joint), e.g. simple clamps or screws as in this example -

and devices which attempt to maintain the natural effect of the facet joint on the relative motion of the vertebrae. The documents concerned (examples are shown below) usually call these devices

"prostheses", even when they do not have the form of the natural facet joint and are not mounted near it.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Facet joint prostheses, i.e. implants attached in the location of the natural	A61F 2/4405
facet joint surfaces after at least partial removal thereof	

A61B 17/7065

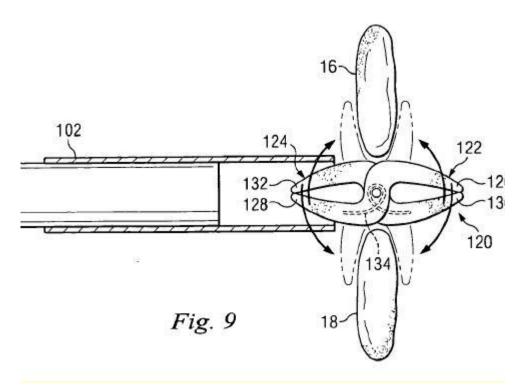

{Devices with changeable shape, e.g. collapsible or having retractable arms to aid implantation; Tools therefor}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7065

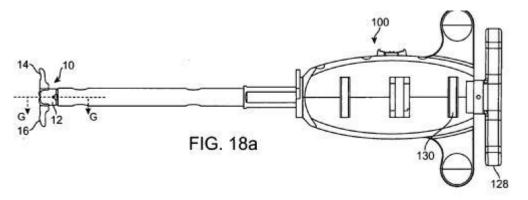

Example:

Inflatable example (WO2009149079):

"The present invention is directed to an inflated interspinous spacer. The interspinous spacer is inserted into the interspinous space between adjacent spinous process in a deflated or unexpanded state, and is inflated or expanded with an injectable filler material. Upon inflation, the spacer preferably distracts the spinous processes and assumes a shape that retains the spacer in position and preferably mechanically locks with the spinous processes. The spacer includes two separate balloons configured to have different compressive modulus so that one balloon is softer and more deformable than the other balloon."

Example of tool for varying the configuration of an implant (10) with movable arms (14), (16), classified here:

Informative references

Attention is drawn to the following places, which may be of interest for search:

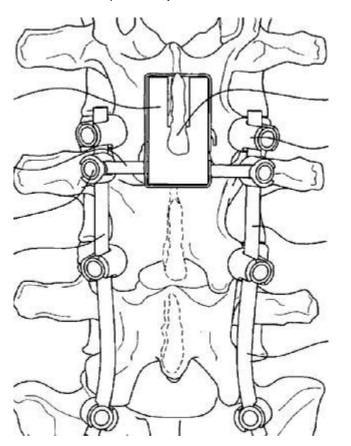

Flexible or articulated longitudinal spinal elements with screws or hooks	A61B 17/7019
---	--------------

{Devices bearing against one or more spinous processes and also attached to another part of the spine; Tools therefor}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7067

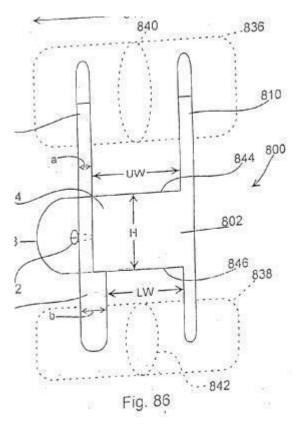

A61B 17/7068

{Devices comprising separate rigid parts, assembled in situ, to bear on each side of spinous processes; Tools therefor}

Definition statement

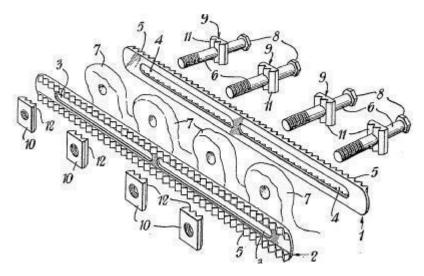

This place covers:

A part of the device intended to bear only on the left side of the processes must be separate from a part intended to bear only on the right side, until they are in position against the processes.

An example where one component includes an inter-process projection (802):

Example comprising plates either side of vertebrae:

A61B 17/707

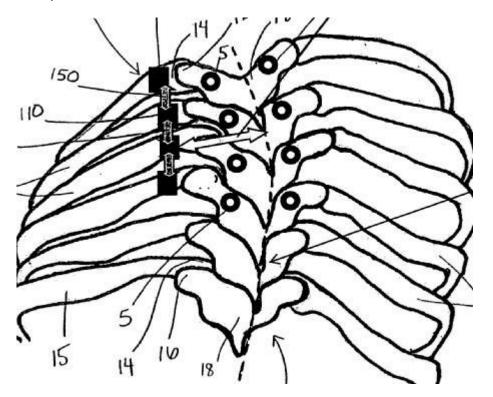

{Devices acting on, or attached to, a transverse process or rib; Tools therefor}

Definition statement

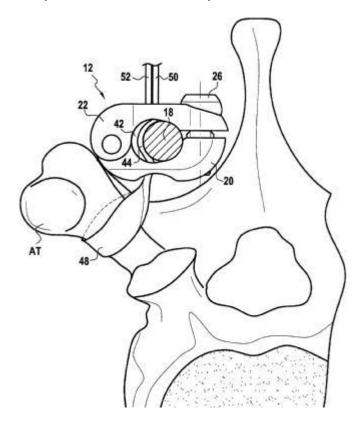

This place covers:

Illustrative example of subject matter classified in A61B 17/707

Example of device on ribs:

Example of device on transverse processes:

{Implants for expanding or repairing the vertebral arch or wedged between laminae or pedicles; Tools therefor}

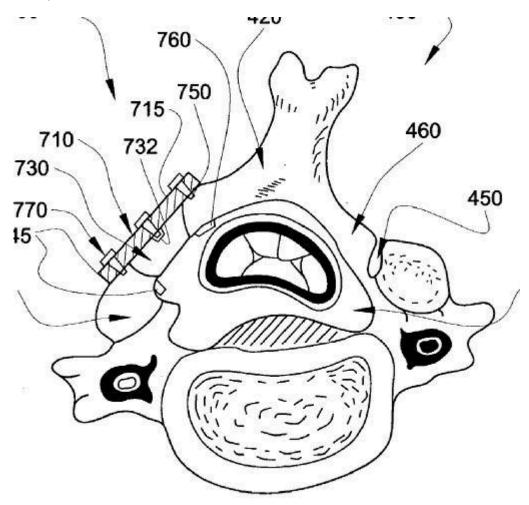

Definition statement

This place covers:

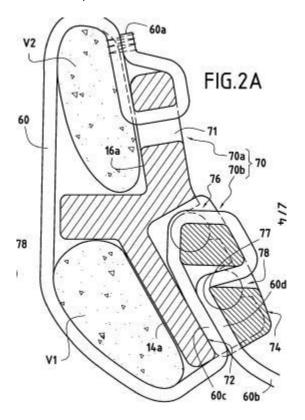

Typically these devices are inserted between the cut ends of a lamina following laminectomy to increase the space available to the spinal cord.

The group covers reconstructing the vertebral arch as well as expanding it.

Example:

The group also covers expansion of the space available to the spinal cord by distracting adjacent vertebrae (V1, V2 in this example showing a vertical section) apart using a wedge between their laminae or pedicles:

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated: Both reconstructing the vertebral arch and expanding it are known as laminoplasty.

A61B 17/7074

{Tools specially adapted for spinal fixation operations other than for bone removal or filler handling (A61B 17/7062, A61B 17/808, A61B 17/8858 take precedence; for spinal image producing devices A61B 90/36, A61B 34/20; markers A61B 90/39)}

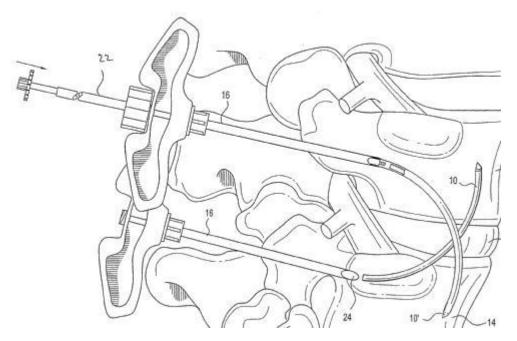

Definition statement

This place covers: Examples:

"Methods and apparatus for vascular protection in spinal surgery" (US2007055111)

"Methods for determining pedicle base circumference" (WO2007087381)

"Procedure for visualising and checking the equilibrium of a vertebral column of which a segment is corrected using known instrumentation, comprising determining the positions of the uppermost and lowermost instrumented vertebrae by means of anatomical points or contours identified by radiography, determining as a function of said positions the positions of the vertebrae adjacent to said uppermost and lowermost vertebrae, and visualising the equilibrium or inequilibrium of the vertebral column in a vertical position viewed from the front and from the side" (WO03073946) An example for which <u>A61B 17/70</u> was given for the implant (10) as well as <u>A61B 17/7074</u> for the tool (22) for implanting it:

Markers, including spinal	<u>A61B 90/39</u>

A61B 17/7076

{for driving, positioning or assembling spinal clamps or bone anchors specially adapted for spinal fixation}

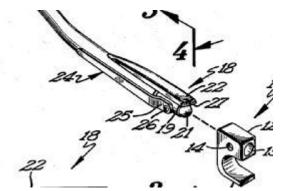

Definition statement

This place covers:

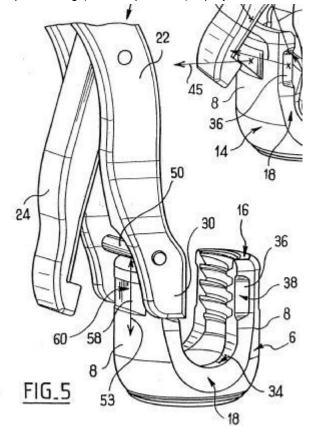

Illustrative example of subject matter classified in A61B 17/7076

Examples:

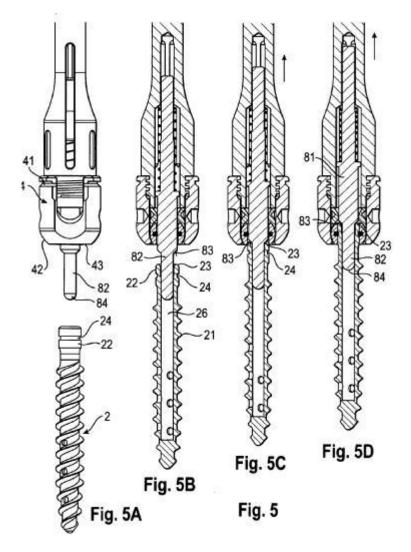

• for positioning a hook:

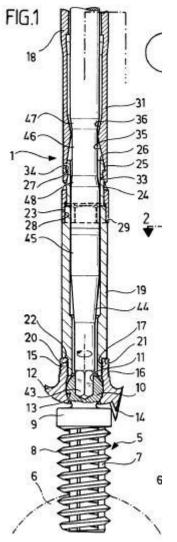

• for positioning (the receptacle of) a polyaxial screw:

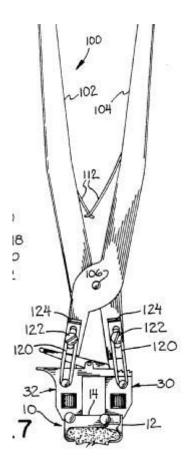

• for assembling a polyaxial screw:

• for inserting a fusion-cage-like threaded anchor (not tapered or pointed and hence not considered as a screw):

• for inserting a vertebral clamp:

{for moving bone anchors attached to vertebrae, thereby displacing the vertebrae}

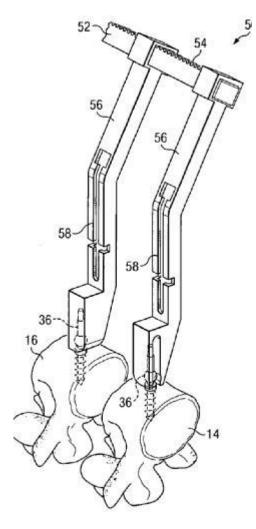

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/7077</u>

A61B 17/7077 (continued)

Definition statement

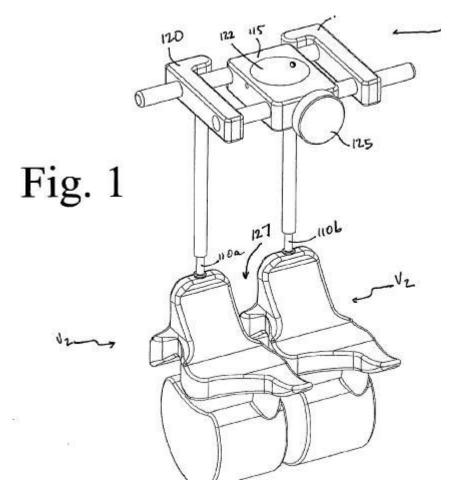

Typical example:

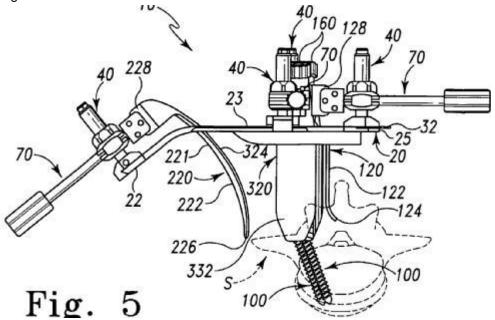

Example of so-called "derotation" devices, usually complex tools, that are classified here:

Definition statement

Tool attached to spinous processes classified here (but not adapted for use with an interspinous implant otherwise it would be classified in <u>A61B 17/7062</u>):

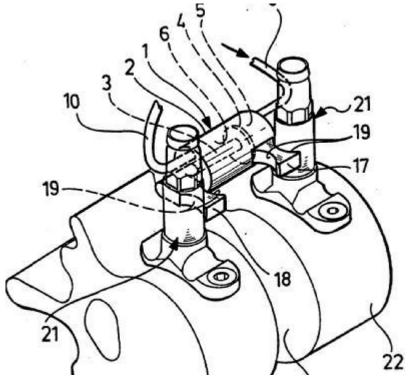

A61B 17/7077 (continued) Definition statement

e.g. of distractor combined with soft tissue retractor which is classified here :

Example, classified here, where the anchors are plates:

Example of document classified here where the device comprises a large frame on the patient's back:

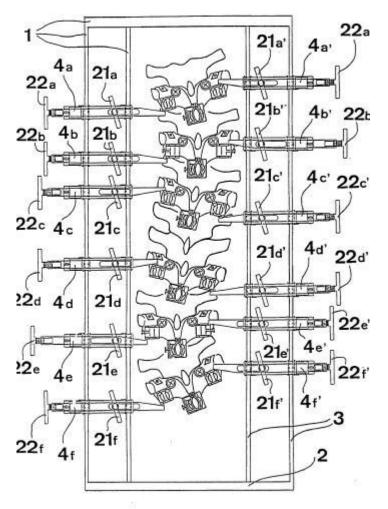

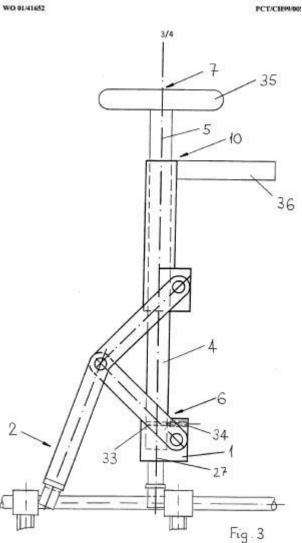

fig.6

{Tools requiring anchors to be already mounted on an implanted longitudinal or transverse element, e.g. where said element guides the anchor motion}

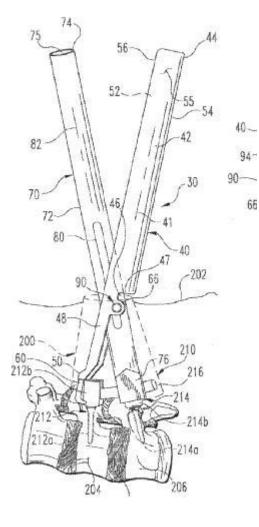

Definition statement

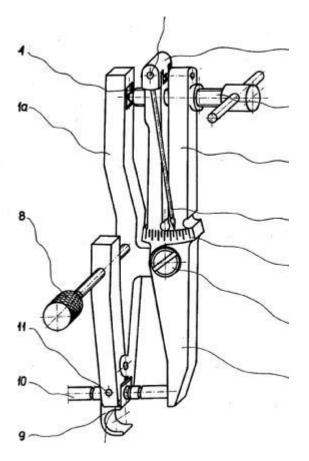

This place covers:

Examples where the tool merely pushes at least one anchor (the left-hand one in the second example) rather than being connected to it, so the longitudinal element is required to guide the motion:

EP 2 184 022

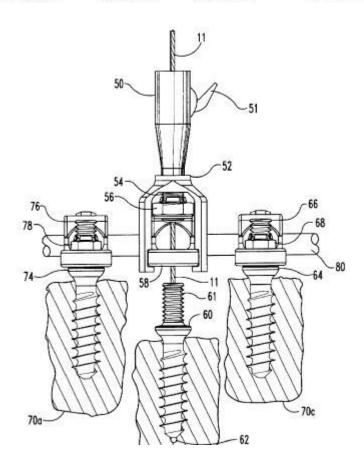

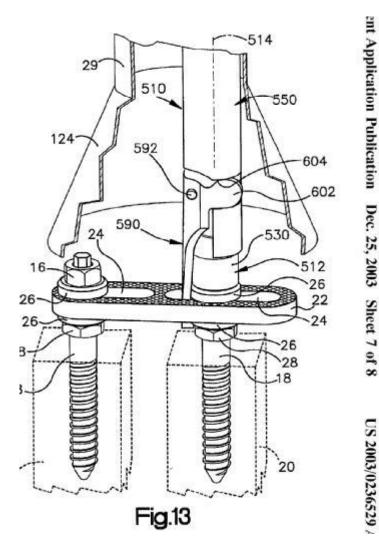

Example acting on a hook and on the rod it is slid along:

Example where anchor movement is perpendicular to the longitudinal element :

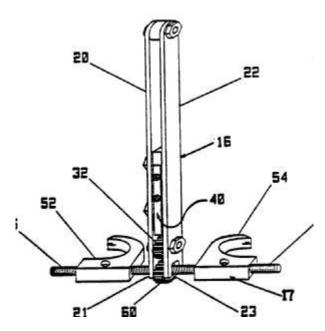

U.S. Patent Jul. 21, 1998 Sheet 2 of 12 5,782,831

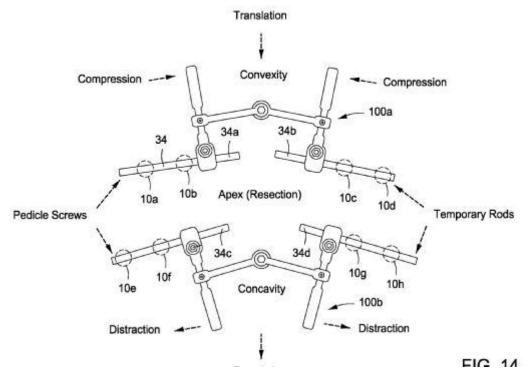

Example where the longitudinal element is a plate and hence the document is also classified in <u>A61B 17/8019</u>:

Example where the tool uses the longitudinal element to displace the anchors (the implant itself is classified in <u>A61B 17/7014</u>):

Example where the tool acts on longitudinal anchor-connecting elements:

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated: Vertebral displacement perpendicular to the spinal axis is known as spondylolisthesis.

{with tubular extensions coaxially mounted on the bone anchors}

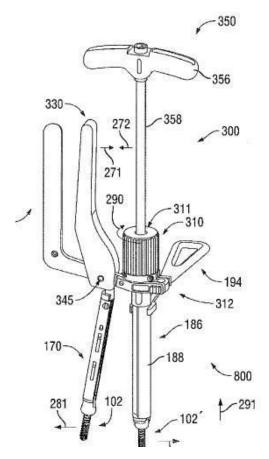

Definition statement

This place covers:

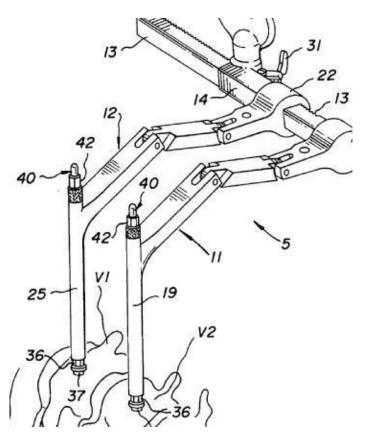

Illustrative example of subject matter classified in <u>A61B 17/708</u>

Examples:

ation Publication Feb. 4, 2010 Sheet 10 of 11 US 2010/0024487

Definition statement

Note the tubular nature of the extensions in the example above (without which it would be classified in <u>A61B 17/7077</u>). These allow tools to be inserted through them, which permits a minimally invasive procedure.

A61B 17/7082

{for driving, i.e. rotating, screws or screw parts specially adapted for spinal fixation, e.g. for driving polyaxial or tulip-headed screws (driving other bone screws <u>A61B 17/8875</u>)}

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/7082</u>

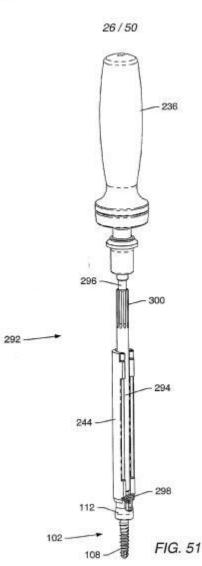

A61B 17/7082 (continued)

Definition statement

Example (screwdriver for pedicular, spinal-rod-holding screws):

P

--------------------------------	---------------------

A61B 17/7083

{Tools for guidance or insertion of tethers, rod-to-anchor connectors, rod-to-rod connectors, or longitudinal elements}

Definition statement

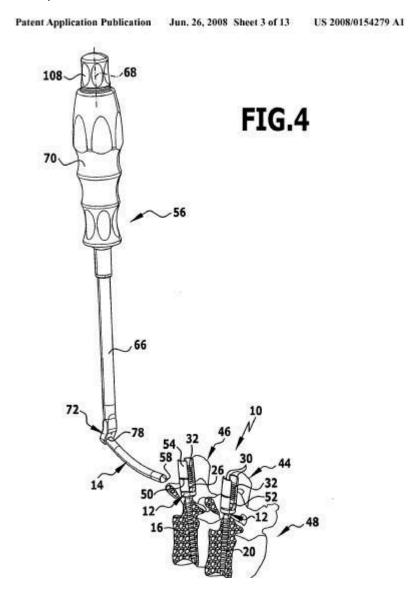

This place covers:

Illustrative example of subject matter classified in A61B 17/7083

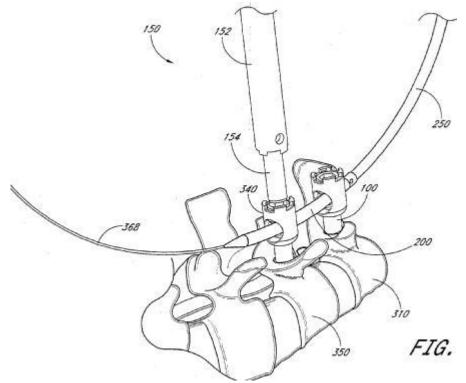

A61B 17/7083 (continued)

Definition statement

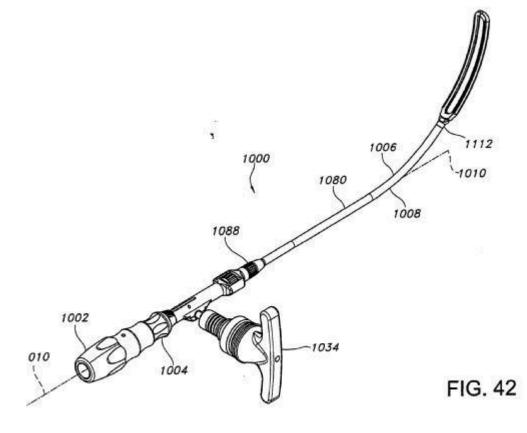

Example rod inserter:

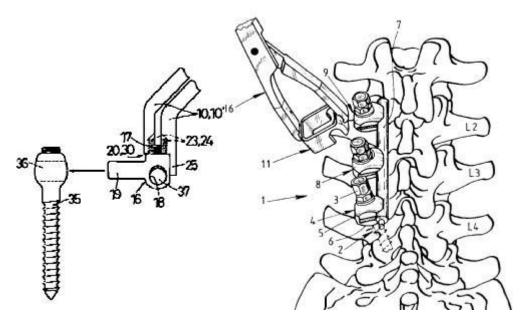

An example where the rod is inserted along a guide wire (NB the wire appears arcuate but this is purely schematic, hence the document is classified here instead of in <u>A61B 17/7089</u>):

Example where the longitudinal element to be inserted is not a rod:

Examples for inserting rod-to-anchor connectors:

A61B 17/7085

{for insertion of a longitudinal element down one or more hollow screw or hook extensions, i.e. at least a part of the element within an extension has a component of movement parallel to the extension's axis}

Definition statement

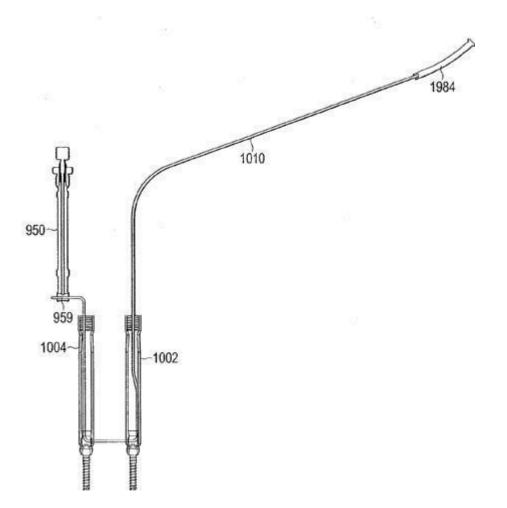

This place covers:

Illustrative example of subject matter classified in A61B 17/7085

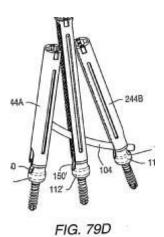

A61B 17/7085 (continued)

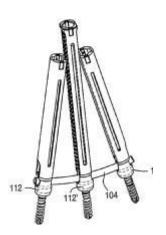

Definition statement

Examples:

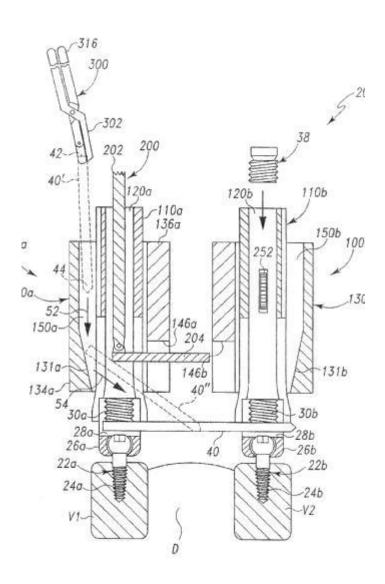

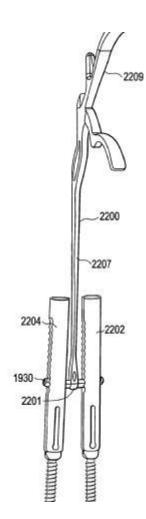

A61B 17/7085 (continued) Definition statement

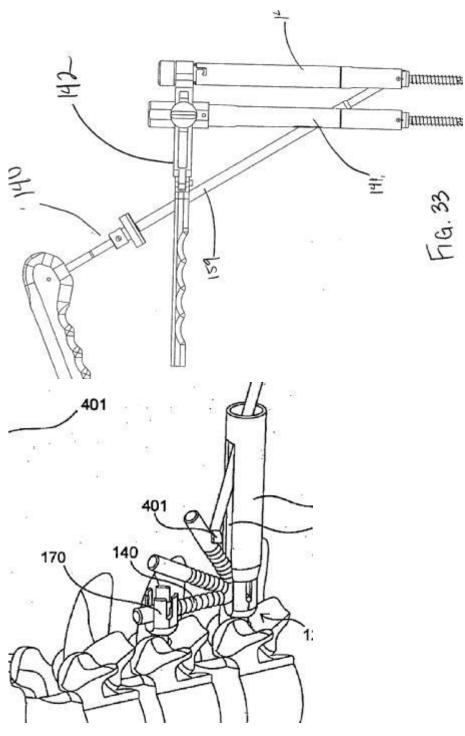

654

{Rod reducers, i.e. devices providing a mechanical advantage to allow a user to force a rod into or onto an anchor head other than by means of a rod-to-bone anchor locking element; rod removers}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7086

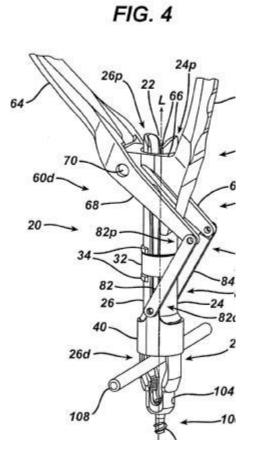

A61B 17/7086 (continued)

Definition statement

Example:

WO 2009/014856

4/12

A61B 17/7088

{wherein the rod is moved transverse to the axis of the bone anchor}

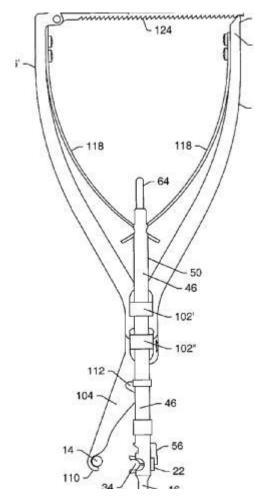

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/7088</u>

A61B 17/7088 (continued)

Definition statement

Example:

A61B 17/7089

{wherein insertion is along an arcuate path}

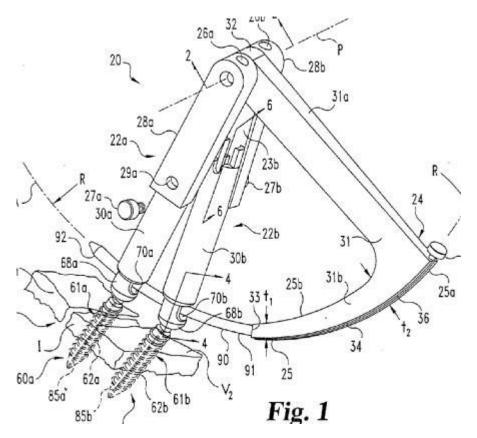

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/7089</u>

A61B 17/7089 (continued)

Definition statement

Example:

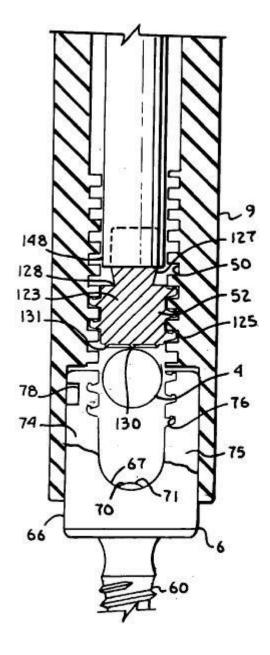

A61B 17/7091

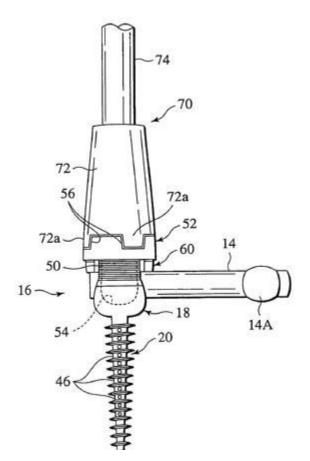

{for applying, tightening or removing longitudinal element-to-bone anchor locking elements, e.g. caps, set screws, nuts or wedges}

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/7091</u> Typically these devices look like this:

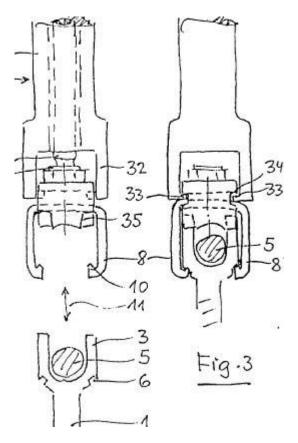

This is an example for a nut (52):

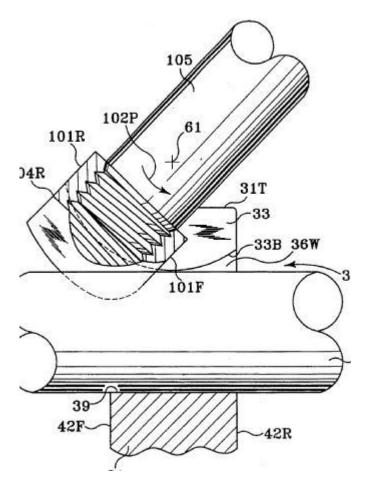

A61B 17/7091 (continued)

Definition statement

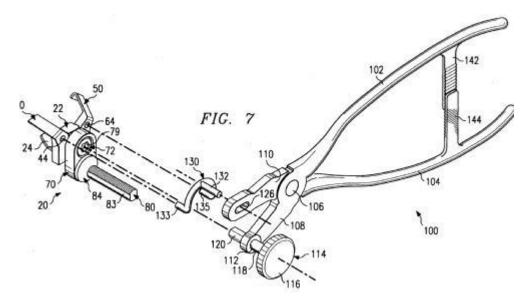

An example for a cap:

An example for a wedge:

An example where the longitudinal element (44, only part shown) is not a rod. (The bone anchors are 50; tool 100 tightens nut 84 and screw 72 and thus locks the assembly.)

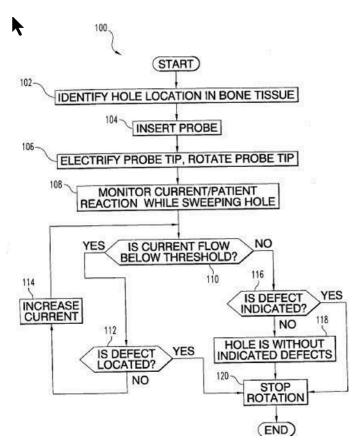

{for checking pedicle hole has correct depth or has an intact wall (pedicle drill depth limiters <u>A61B 17/1626</u>)}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7092

Example:

References

Electromyography for checking screw impingement on nerves	<u>A61B 5/389</u>
Means for controlling the depth to which a pedicle is drilled	A61B 17/1626

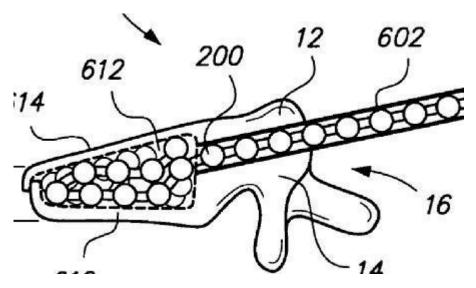

{Solid vertebral fillers; devices for inserting such fillers}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7094

Example:

References

Limiting references

This place does not cover:

Bone-expanding elements which form a mechanism rather than merely	A61B 17/885
being particles joined together	

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

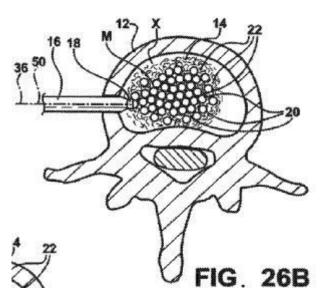

Filler	a material without a fixed shape, although the individual elements
	which form it may have a fixed shape, e.g. spherical beads

{the filler comprising unlinked macroscopic particles}

Definition statement

This place covers:

Vertebral fillers comprising particles, whether or not embedded in a matrix as in the following example; and devices for insertion thereof:

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

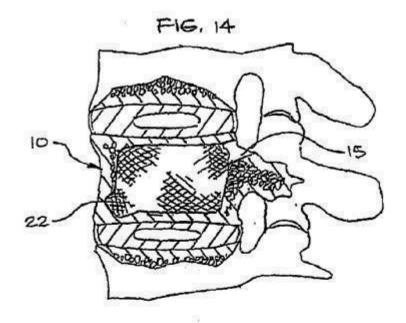

Inserting bone graft implants, e.g. particles thereof	A61F 2/4601

A61B 17/7097

{Stabilisers comprising fluid filler in an implant, e.g. balloon; devices for inserting or filling such implants (disc prostheses made of inflatable chambers or pockets filled with fluid <u>A61F 2/441</u>; replacing the nucleus pulposus <u>A61F 2002/444</u>)}

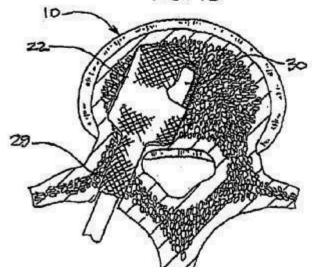

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/7097</u>

Example (fig. 15 shows filling of container 22, fig.14 shows it left in the vertebra as an implant):

FIG. 15

References

Limiting references

This place does not cover:

Filler introducer tips comprising containers which are removed from bone	A61B 17/8811
after filler has been introduced into them, leaving the filler in place	

Informative references

Attention is drawn to the following places, which may be of interest for search:

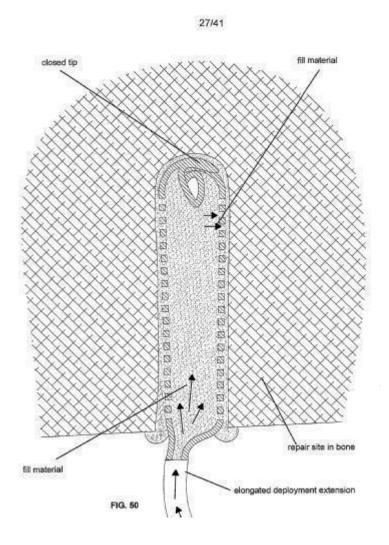

Disc prostheses made of inflatable chambers or pockets filled with fluid	<u>A61F 2/441</u>
Replacing the nucleus pulposus	A61F 2002/444

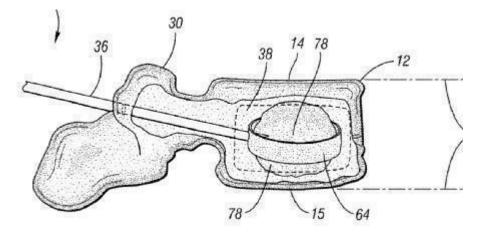

{wherein the implant is permeable or has openings, e.g. fenestrated screw (hollow surgical screws <u>A61B 17/864</u>)}

Special rules of classification

Illustrative example of subject matter classified in A61B 17/7098

Porous example:

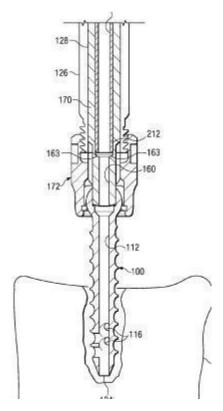

Example where the implant is an annulus surrounding the filler:

Example of injection through cannulated screw

(US2009264895:):

A61B 17/72

Intramedullary {pins, nails or other} devices {(A61B 17/744 takes precedence)}

References

Limiting references

This place does not cover:

Devices for the head, neck or trochanter of the femur, including IM pins or A61B17/78 the like

{for bone lengthening or compression (A61B 17/7258 takes precedence)}

References

Limiting references

This place does not cover:

IM nails with laterally expanding parts <u>A61B 17/7258</u>	IM nails with laterally expanding parts	A61B 17/7258
---	---	--------------

A61B 17/7233

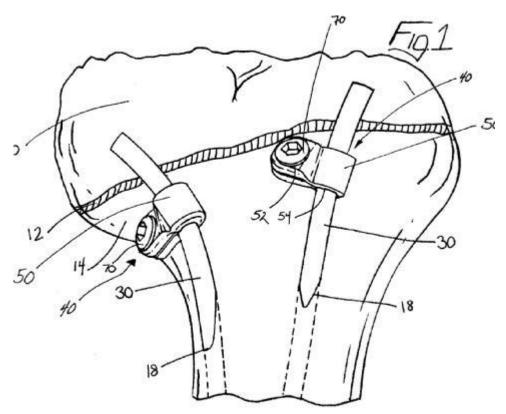

{with special means of locking the nail to the bone}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/7053

Includes, for example, nails with special means comprising a plate-like end, or a connector like (50) shown here:

A61B 17/725

{with locking pins or screws of special form}

Definition statement

This place covers:

Nails with locking pins or screws which are adapted, or particularly suited, for use with nails.

A61B 17/80

Cortical plates {, i.e. bone plates; Instruments for holding or positioning cortical plates, or for compressing bones attached to cortical plates}

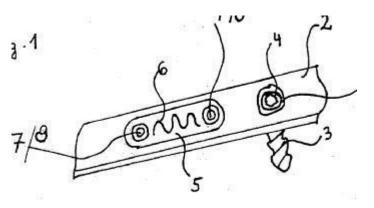

Definition statement

This place covers:

Cortical plates classified in this group as opposed to its subgroups include for example those with a particular form unrelated to a particular bone such as:

or having a particular material; a particular manufacturing processes; or with functions in addition to fixing bone, for instance this one with a strain gauge:

References

Application-oriented references

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

Cortical plates used as spinal positioners or stabilisers	<u>A61B 17/7059</u>
---	---------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Plates to support bone grafts	<u>A61F 2/2846</u>
Plate-like wound dressings	<u>A61F 13/00</u>

Special rules of classification

Cortical plates including a ratchet are classified in <u>A61B 17/8009</u> even when the cortical plate is not explicitly used for compression or distraction of the bones.

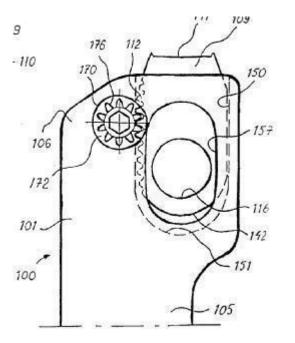

A61B 17/8004

{with means for distracting or compressing the bone or bones}

Definition statement

This place covers:

Bones or fragments of bone must be compressed against each other in this group. The definition does not refer to plates that simply press against the surface of the bone when their screws are tightened, something ordinary cortical bone plates do and as a result of which such plates are occasionally called "compression plates".

Example of a compression mechanism classified here:

Example of a plate classified here because it has a property that can be used to achieve compression/ distraction, e.g. made of shape memory or, as in this case, plastically deformable to clamp bone fragments together (the deformed outline is shown dashed)

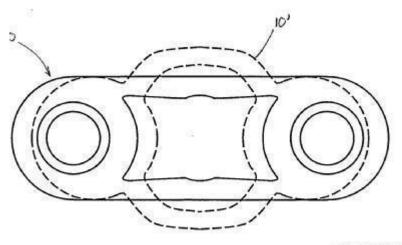

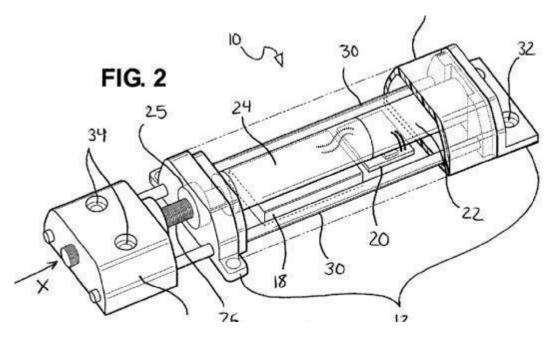

FIGURE 3

It would be difficult to draw a dividing line between distraction/compression plates and other subcutaneous distraction/compression devices mounted on the bone surface, so "plate" has been generously interpreted, e.g. this is classified in <u>A61B 17/8004</u>:

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Alignment, compression or distraction mechanisms with parts external	A61B 17/663
to the body, including those which are mainly implanted but have	
percutaneous means of operation	

Special rules of classification

Plates which allow compression or distraction due to relative movement of parts of these plates, e.g. dynamic plates or static compression plates, and which are not "locked in" by a device such as a ratchet, should be classified also in <u>A61B 17/8023</u>.

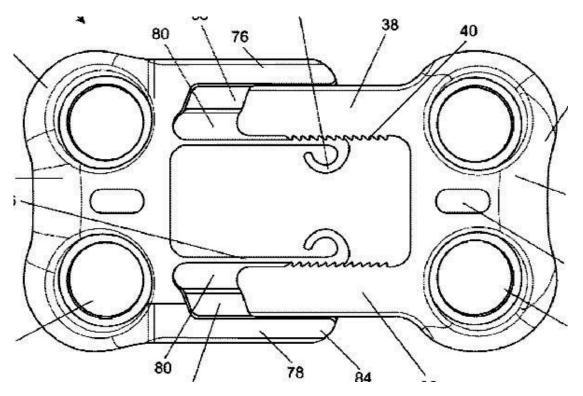

A61B 17/8009

{the plate having a ratchet}

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/8009</u> Definition statement

Example:

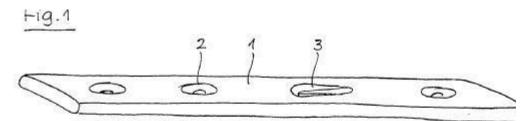

Thanks to the ratchet the plate halves can only move relative to each other in one direction, so due to movement in the implanted state either compression or distraction of the bone will develop.

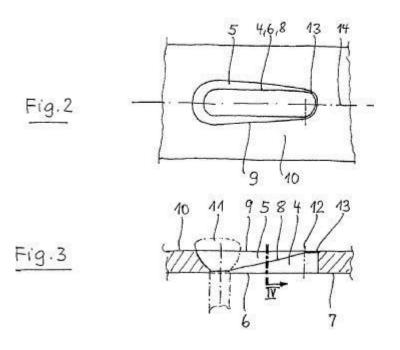

{the extension or compression force being caused by interaction of the plate hole and the screws}

Definition statement

This place covers:

Most commonly, as here, the ramped form of the bone screw holes forces the screw heads laterally, and hence displaces the bone fragments to which the screws are attached:

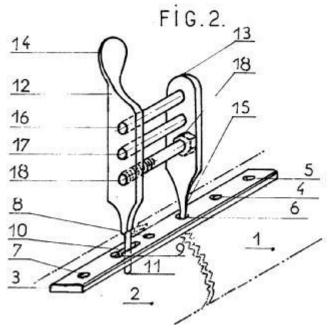

{where the means are a separate tool rather than being part of the plate}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/8019

e.g. (tool 13 is removed once the plate is fixed):

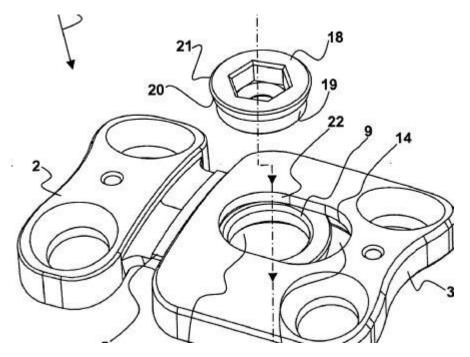

A61B 17/8023

{Variable length plates adjustable in both directions}

Definition statement

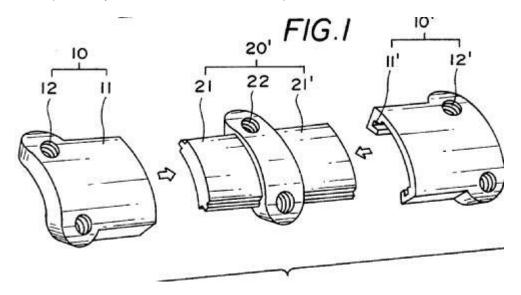

This place covers:

Plates whose length can be changed in both directions, i.e. it must be possible both to lengthen and to shorten any plate classified in this group.

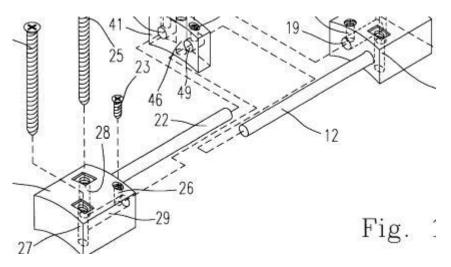

Either the length may be adjusted and then fixed (here using screw 21):

or the parts may be left free to move in the implanted state:

Definition statement

As with <u>A61B 17/8004</u>, the term "plate" is generously interpreted, e.g. the device below comprising two blocks which can slide relative to each other guided by mating projections in bores is classified in <u>A61B 17/8023</u>:

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

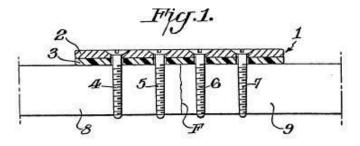

Plates having a ratchet	A61B 17/8009

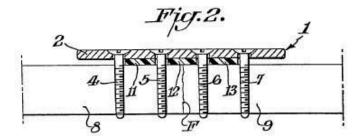

A61B 17/8028

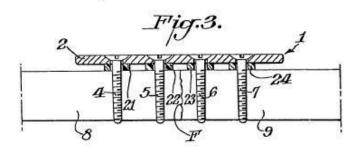

{Cushions, i.e. elements forming interface between bone plate and bone}

Definition statement

This place covers: Illustrative example of subject matter classified in <u>A61B 17/8028</u> For example, here the cushions are 3, 11-13 and 21-24:

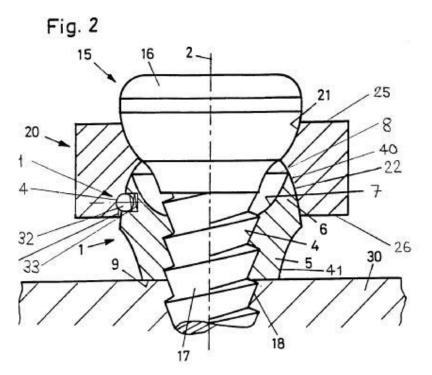

Definition statement

Here the cushion is 5:

References

Attention is drawn to the following places, which may be of interest for search:

Washers, i.e. pads placed around screws or bolts	<u>A61B 17/8695</u>
--	---------------------

A61B 17/8033

{having indirect contact with screw heads, or having contact with screw heads maintained with the aid of additional components, e.g. nuts, wedges or head covers}

Definition statement

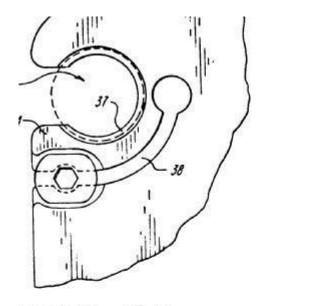

This place covers:

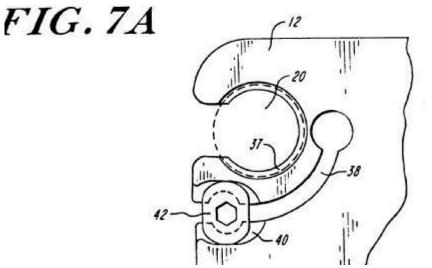

Illustrative example of subject matter classified in A61B 17/8033

A61B 17/8033 (continued)

Definition statement

Another example is

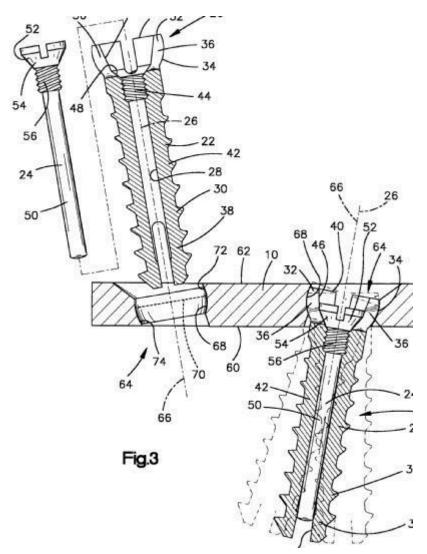

where the additional component is cam 42 which deforms the plate so as to clamp the screw head.

{the additional component being inserted in the screw head}

Definition statement

This place covers:

Typically the inserted component expands the screw head so that it cannot escape from the plate hole, although occasionally, as indicated here dashed in the lower figure, the expansion is not so great that the screw can no longer pivot in the screw hole:

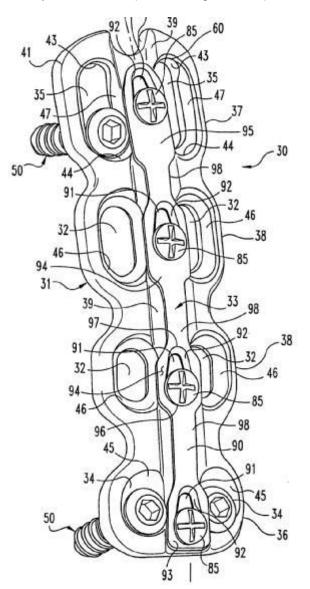

{the additional component being a cover over the screw head}

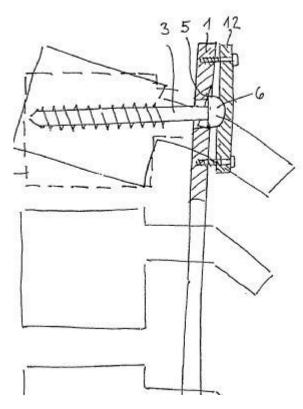

Definition statement

This place covers:

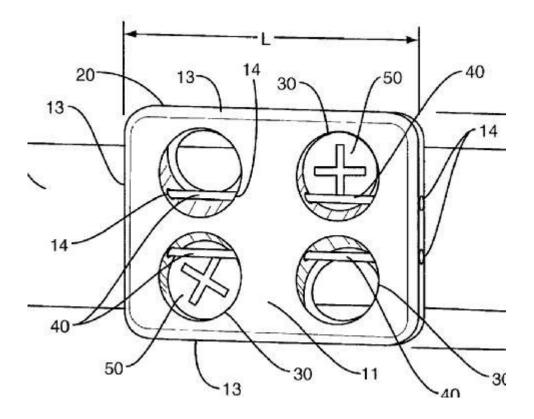

There may be one cover (here, sliding cover 98) for many screws:

Or one cover per screw as in this example:

Also, the "cover" may be a small element that only lies over a part of the screw head, such as 40 in this example:

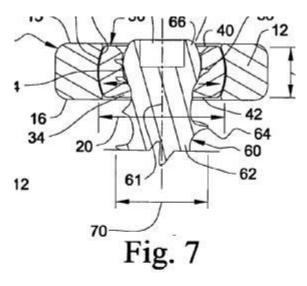

{wherein the additional element surrounds the screw head in the plate hole (<u>A61B 17/8052</u> takes precedence)}

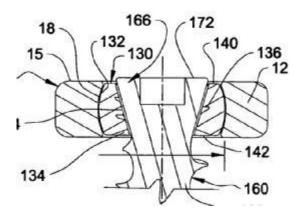

Definition statement

This place covers:

Most commonly in this group the screw head expands the additional element, either so that the head is merely trapped in the plate hole but can still rotate (upper figure in this example), or so that plate, screw and additional element are locked relative to each other by friction (lower figure):

Trochars for intraosseous injections	<u>A61B 17/3472</u>
Injecting graft material	A61F 2/4601

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Injection of cement into the vertebra without prior creation of a cavity in it is called "vertebroplasty". If there is prior preparation of a cavity the procedure is "kyphoplasty".

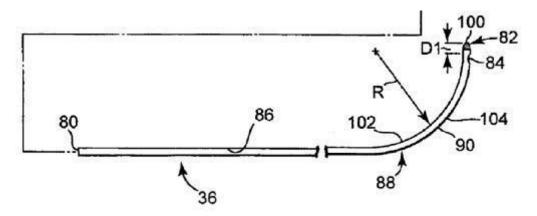

{characterised by the introducer tip, i.e. the part inserted into or onto the bone}

Definition statement

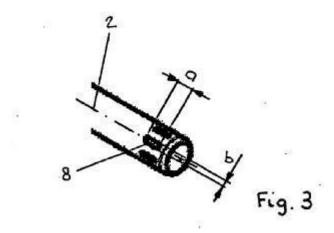

This place covers:

Illustrative example of subject matter classified in <u>A61B 17/8811</u>

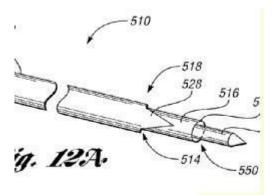

e.g. US2010121336:

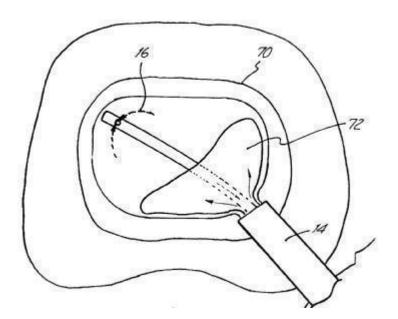

US2010145277:

US2009163872:

In this example the tip is a container into which fluid is injected; the container can be opened or ruptured and then removed (which is why the document is not in <u>A61B 17/7097</u>) leaving the filler in place:

A61B 17/8816

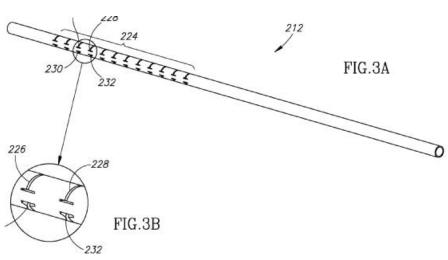

{characterised by the conduit, e.g. tube, along which fluid flows into the body or by conduit connections}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 17/8816

e.g. WO2007036815:

e.g (of connectors) CN201150561Y : TI - Bone cement injection syringe AB - The utility model relates to a bone cement injector, which relates to an injector, and particularly relates to a bone cement injector for vertebral injection. The utility model provides a bone cement injector which has the advantages of convenient and swift operation, simple structure, low production cost and pollution prevention, which comprises an injection tube, a spiral push rod, an injection tube connector, a

connecting flexible pipe, a connecting flexible pipe joint and an injection needle, wherein the rear end of the injection tube is provided with a handle with an internal screw hole, the handle is connected with the spiral push rod through screw threads, the front end of the injection tube is connected with the injection tube connector through screw threads, the front portion of the spiral push rod is arranged in the injection tube, which forms relative rotation and piston-type sliding engagement with the inner cavity of the injection tube, the rear end of the spiral push rod is provided with a handle, one end of the connecting flexible pipe is connected with the injection tube connector, and the other end of the pipe joint is connected with the injection needle.

A61B 17/8819

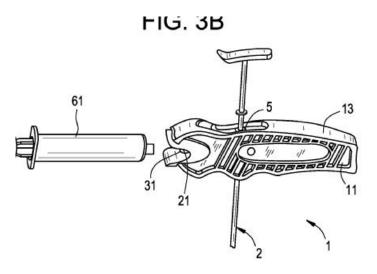

{characterised by the introducer proximal part, e.g. cannula handle, or by parts which are inserted inside each other, e.g. stylet and cannula (<u>A61B 17/8825</u> takes precedence)}

Definition statement

This place covers:

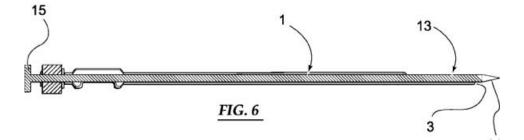

Illustrative example of subject matter classified in A61B 17/8819

e.g. (WO2008140519):

e.g. of nesting (WO2008011262):

An outer cannula (1) has a wall, an open end, an open distal end suitable for insertion into intraosseous cavity (27) of a spinal vertebra (26). A lumen extends between the proximal and distal ends. Wall has a side-port (5) situated near the distal end such that a lumen is fluidly coupled with the cavity. An inner cannula is received inside the outer cannula. Inner cannula has a second wall, an open proximal end, a closed distal end and a second lumen. Second wall has a side-port that aligns to outer cannula side-port for discharged of bone cement from within the second lumen into the cavity.

A61B 17/8836

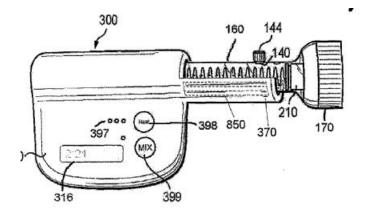

{for heating, cooling or curing of bone cement or fluid fillers}

Definition statement

This place covers:

Curing: EP16880979 The invention is based on the use of polyisobutylmethacrylate instead of PMMA as an adhesive or spinal fill material for treating diseases of the spine. Polyisobutylmethacrylate has several advantages over PMMA, mainly less heat is developed during the in situ polymerization process. When using any spinal adhesive of fill material that is light activated, a tube can be used to transmit activating light to the light-activated adhesive or spinal polymerizable fill material at the surgical site. In addition, a mesh bag comprising optical fibers or similar light transmitting material can be employed to receive the injected light-activated fill, with the mesh bag, irradiated externally, for directing the light via the bag to the polymerizable fill.

Heater (WO2010008814):

Special rules of classification

Control aspects for surgery not covered by <u>A61B 2018/00636</u> should be indexed using CPC codes <u>A61B 2017/00017</u> - <u>A61B 2017/00225</u>. Additional features or accessories for surgery not covered by <u>A61B 18/00</u> should be classified in <u>A61B 90/00</u> or <u>A61B 34/00</u>.

The use of the CPC indexing codes (2000-series symbols which include both breakdown and orthogonal symbols) is mandatory in this field. The breakdown and the orthogonal symbols of A61B 17/00 are also used for documents classified in the main trunk of A61B 18/00 to index relevant aspects for which no suitable symbol is available under A61B 18/00, A61B 2018/00005 or A61B 2218/00.

The area relating to the body part being treated is classified in <u>A61B 2018/00315</u> - <u>A61B 2018/00565</u>.

A61B 2018/00005

{Cooling or heating of the probe or tissue immediately surrounding the probe}

Definition statement

This place covers:

Cooling or heating an instrument or tissue NOT to be treated. The cooling or heating has no therapeutic or surgical effect, it just serves to maintain a normal thermal status which would be changed by the thermal therapeutic energy.

A61B 2018/00315

{for treatment of particular body parts}

Definition statement

This place covers:

The subgroups define various surgical applications or body areas which are treated.

Special rules of classification

Groups not used for invention information. Headgroup <u>A61B 2018/00315</u> not to be used for classification.

A61B 2018/00571

{for achieving a particular surgical effect}

Definition statement

This place covers:

The subgroups define various surgical effects achieved by the thermal energy.

Special rules of classification

Headgroup <u>A61B 2018/00571</u> not used for classification.

A61B 2018/00636

{Sensing and controlling the application of energy}

Definition statement

This place covers: The subgroups define various control aspects during thermal surgery.

Special rules of classification

Headgroup A61B 2018/00636 not to be used for classification.

A61B 18/02

by cooling, e.g. cryogenic techniques (devices for cooling specific reflex points of the body within cell-life limits <u>A61H 39/06</u>)

Definition statement

This place covers: Cooling, i.e. cryogenic surgery.

Tissue destroyed by freezing.

References

Limiting references

This place does not cover:

	<u>A61B 2018/00005</u> – <u>A61B 2018/00047</u>
Cooling for non-destructive therapy to be classified in	<u>A61F 7/10</u>
Devices for cooling specific reflex points of the body within cell-life limits	<u>A61H 39/06</u>

by heating (by applying electromagnetic radiation <u>A61B 18/18</u>; hyperthermia using electric or magnetic fields, radiation or ultrasound <u>A61N</u>)

Definition statement

This place covers:

Heating for tissue destruction in general. Specific energies used therefor in classes below.

References

Limiting references

This place does not cover:

by applying electromagnetic radiation	<u>A61B 18/18</u>

Informative references

Hyperthermia using electric or magnetic fields, radiation or ultrasound	<u>A61N</u>
---	-------------

A61B 18/042

{using additional gas becoming plasma}

Definition statement

This place covers:

The subgroups define various mechanical features of the treatment devices.

Special rules of classification

Headgroup <u>A61B 18/042</u> not to be used for classification.

A61B 18/06

caused by chemical reaction {, e.g. moxaburners}

Definition statement

This place covers: Using heat caused by chemical reaction, e.g. moxibustion.

A61B 18/08

by means of electrically-heated probes

Definition statement

This place covers:

Using electrically heated probes. No current is guided through the tissue. Part of the probe itself is heated by current passing through it, e.g. due to its resistivity.

Power sources therefor

Definition statement

This place covers: Power sources for the electrically heated probes defined above.

A61B 18/12

by passing a current through the tissue to be heated, e.g. high-frequency current

Definition statement

This place covers:

Heating by passing electrical current through tissue to be heated, e.g. with RF frequencies. Electrodes themselves to not (substantially) heat up. Generators therefore in <u>A61B 18/1206</u>.

A61B 18/14

Probes or electrodes therefor

Definition statement

This place covers:

(Active) Electrodes and probes carrying those for passing current through tissue to be heated.

A61B 18/1445

{at the distal end of a shaft, e.g. forceps or scissors at the end of a rigid rod}

Special rules of classification

Indexing codes A61B 2017/2901 - A61B 2017/2948 are used to index specific structural features of forceps-type probes or electrodes.

A61B 18/16

Indifferent or passive electrodes for grounding

Definition statement

This place covers:

Passive (indifferent, return, ground) electrodes for grounding the patient. Usually large surface electrodes to be attached to the patient to collect current emitted by the active electrode(s). No surgical effect intended under these passive electrodes.

by applying electromagnetic radiation, e.g. microwaves (radiation therapy A61N 5/00)

Definition statement

This place covers:

using electromagnetic radiation, e.g. light other than laser or microwaves (A61B 18/1815).

References

Informative references

---	---

A61B 18/20

using laser

Definition statement

This place covers:

Using laser. Lasers for eye surgery to be classified in <u>A61F 9/008</u> and subgroups.

A61B 18/22

the beam being directed along or through a flexible conduit, e.g. an optical fibre; {Couplings or} hand-pieces therefor

Definition statement

This place covers: The laser beam being guided through a flexible conduit, e.g. optical fiber.

A61B 18/24

with a catheter (A61B 18/26, A61B 18/28 take precedence)

Definition statement

This place covers:

The laser beam being guided through a catheter or needle like introducer.

References

Limiting references

This place does not cover:

for producing a shock wave, e.g. laser lithotripsy	<u>A61B 18/26</u> .
for heating a thermal probe or absorber	<u>A61B 18/28</u>

for producing a shock wave, e.g. laser lithotripsy

Definition statement

This place covers:

The laser light producing a mechanical shock wave in a liquid or part of the device.

A61B 18/28

for heating a thermal probe or absorber

Definition statement

This place covers:

The laser heating a thermal probe or an absorber which transfers the heat to the tissue to be treated.

A61B 34/10

Computer-aided planning, simulation or modelling of surgical operations

Definition statement

This place covers: Determination of a treatment plan for surgery.

References

Informative references

Mechanical markers for eye keratomy	A61F 9/0136
Markers in surgical tampons or sponges	<u>A61F 13/44</u>
Sponges/dressings with markers	<u>A61F 13/44</u>
Markers for catheters	<u>A61M 25/0108</u>
Calibration of imaging systems, e.g. using test probes	<u>G01R 33/58</u>

Testing of X-ray installation, e.g. by phantoms	<u>G06F 3/0488</u>

{Radioactive markers}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

A61B 2090/3937

{Visible markers}

Definition statement

This place covers:

Includes laser marks (e.g. a laser point guiding for a laparoscope)

References

Limiting references

This place does not cover:

Identification means coded with symbols <u>A61B 90/94</u>

Informative references

Attention is drawn to the following places, which may be of interest for search:

Visible markers on catheters	A61M 2025/0008
Optical identification markers of media introduction devices	A61M 2205/6063

A61B 2090/3954

{magnetic, e.g. NMR or MRI}

References

Informative references

<u>A61M 25/0127</u>

{Radiopaque markers visible in an X-ray image}

Definition statement

This place covers:

Radiopaque, having particular properties, not just leaving a shadow on the x-ray.

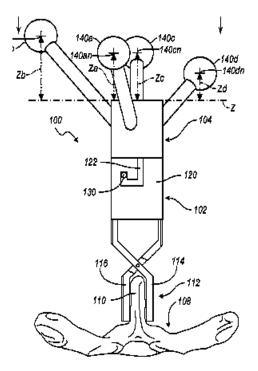

A61B 2090/3983

{Reference marker arrangements for use with image guided surgery}

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 2090/3983

A61B 2090/3987

{Applicators for implanting markers}

References

Informative references

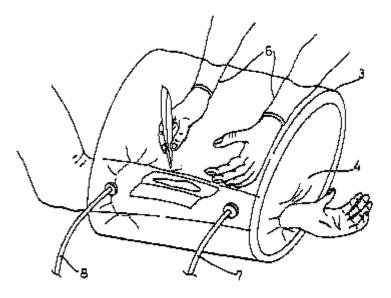

A61B 90/40

Apparatus fixed or close to patients specially adapted for providing an aseptic surgical environment

Definition statement

This place covers:

Illustrative example of subject matter classified in A61B 90/40

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

|--|

A61B 90/50

Supports for surgical instruments, e.g. articulated arms

References

Limiting references

This place does not cover:

Surgical manipulators	<u>A61B 34/70</u>
Holders for articles	A61B 50/20

Informative references

Attention is drawn to the following places, which may be of interest for search:

Endoscope positioning articulated arms	A61B 1/00149
Accessories for operation tables	<u>A61G 13/10</u>
Stands as supports for apparatus or articles in general	<u>F16M 11/00</u>
Stands with ball joints	<u>F16M 11/14</u>
Supports for lighting	F21V 21/00
Supports for optical elements	<u>G02B 7/001</u>

A61B 2090/5025

{with a counter-balancing mechanism}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Counterbalancing structure (e.g. surgical microscope)	<u>G02B 7/001</u>
---	-------------------

A61B 2090/508

{with releasable brake mechanisms}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Lockable arms (mostly of the tension cable lock-type) are common in	A61B 2017/0237
cardiac retractors:	

A61B 90/60

Supports for surgeons, e.g. chairs or hand supports (seats for dentists or surgeons associated with dental chairs or operating chairs <u>A61G 15/00</u>)

References

Informative references

Wrist support platforms	<u>A47B 21/0371</u>
Chairs in general	<u>A47C</u>
Ergonomic chairs	<u>A47C 9/002</u>
Operating chairs	<u>A61G 15/00</u>

A61B 90/70

Cleaning devices specially adapted for surgical instruments

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Endoscopes with cleaning features	<u>A61B 1/121</u>
Cleaning of dental devices	<u>A61C 19/002</u>
Disinfecting	<u>A61L 2/00</u>
Cleaning of fluid or tube connectors	<u>A61M 39/16</u>
Cleaning in General	<u>B08B</u>
Cleaning by methods involving presence of liquid or steam	<u>B08B 3/00</u>

A61B 2090/701

{for flexible tubular instruments, e.g. endoscopes}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

For cleaning features on endoscopes	<u>A61B 1/121</u>

A61B 2090/702

{Devices for testing the cleaning process, e.g. test soils}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Devices for testing effectiveness of sterilisation	<u>A61L 2/28</u>

A61B 90/80

Implements for cleaning or washing the skin of surgeons or patients

References

Informative references

Hand held absorbent pads containing cleaning liquid	<u>A61M 35/006</u>
---	--------------------

A61B 90/90

Identification means for patients or instruments, e.g. tags

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

For scanning devices	<u>G06K 7/00</u>
RFID tags	<u>G06K 19/07</u>

A61B 90/98

using electromagnetic means, e.g. transponders

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Arrangements for sensing record carrier	<u>G06K 7/00</u>
RFID tags	<u>G06K 7/00</u>

A61B 2503/00

Evaluating a particular growth phase or type of persons or animals

Definition statement

This place covers:

Particular types of patients or of subject under examination using apparatus and methods according to <u>A61B 5/00</u>

A61B 2503/02

Foetus

References

Informative references

Transmission of foetal data	<u>A61B 5/0011</u>
Measuring heart rate of foetus	<u>A61B 5/02411</u>
Pregnancy / labour monitoring	<u>A61B 5/4343</u>
Sensor adapted to attachment to the uterus	<u>A61B 5/6875</u>

A61B 2503/04

Babies, e.g. for SIDS detection

Definition statement

This place covers: Infants up to around 1 year old

A61B 2503/06

Children, e.g. for attention deficit diagnosis

Definition statement

This place covers: Older children

A61B 2503/10

Athletes

Definition statement

This place covers: Evaluation of subjects, usually healthy, while practicing sports.

A61B 2503/12

Healthy persons not otherwise provided for, e.g. subjects of a marketing survey

Definition statement

This place covers: E.g., evaluate responses of the public to stimuli such as advertisements for marketing purposes

A61B 2503/20

Workers

Definition statement

This place covers: Evaluation of subjects while working

A61B 2503/22

Motor vehicles operators, e.g. drivers, pilots, captains

Definition statement

This place covers: Evaluation of subjects while conducting means of transport

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Evaluate vehicle drivers, e.g. for sleepiness	<u>A61B 5/18</u>
Sensors mounted on cars	<u>A61B 5/6893</u>

A61B 2503/42

for laboratory research

Definition statement

This place covers:

E.g., testing drugs

A61B 2562/0209

Special features of electrodes classified in <u>A61B 5/24</u>, <u>A61B 5/25</u>, <u>A61B 5/283</u>, <u>A61B 5/291</u>, <u>A61B 5/296</u>, <u>A61B 5/053</u>

References

Informative references

Electrodes for electrosurgery	<u>A61B 18/14</u>
Electrodes for stimulation	<u>A61N 1/04</u>
