

C11D

DETERGENT COMPOSITIONS; USE OF SINGLE SUBSTANCES AS DETERGENTS; SOAP OR SOAP-MAKING; RESIN SOAPS; RECOVERY OF GLYCEROL

Definition statement

This place covers:

- Detergent compositions used for cleaning or washing. Fabric softening compositions.
- Detergent compositions based essentially on surface-active compounds, such as anionic, cationic, amphoteric or nonionic surfactants;
- Compounding ingredients for such compositions, e.g. compounds such as carbonate, animal products or polymer;
- Compounding ingredients characterised by their effect or property;
- Detergent compositions based essentially on non-surface active compounds, which means no surfactant is present;
- Detergent compositions based essentially on soap;
- Use of single substances, such as surface-active compounds, as detergents;
- Detergent compositions based on more than one type of compound;
- Methods of preparing compositions containing mixtures of detergents;
- Special cleaning and washing methods;
- Making soap or soap solutions in general;
- Making resin soap or soaps derived from naphthenic acids, and compositions thereof;
- Detergent materials or soaps characterised by their physical properties;
- Recovery of glycerol from a saponification liquor.

Relationships with other classification places

Cosmetic preparations comprising surfactants are classified in [A61K 8/00](#), [A61Q 5/00](#) and [A61Q 19/00](#); they include washing the hair, cleaning the teeth or mouth, cleansing the body (e.g. shower preparation).

General cleansing compositions which are usually liquid are classified in [A61K 8/00](#), [A61Q 5/00](#) and [A61Q 19/00](#).

Liquid soaps, soap bars (solid cleansing compositions) and syndet bars are only classified in [C11D](#).

Chemical treatment or cleaning of semiconductor	H01L 21/306 , H01L 21/02041
Cleaning or polishing of printed circuits	H05K 3/26

Special rules of classification

Each relevant compound/composition is classified according to the rules in the most appropriate place.

When classifying in the mixture groups of this subclass, any individual ingredient of a composition which is not identified by such classification, and which itself is determined to be novel and non-obvious, must also be classified in groups [C11D 1/00](#) - [C11D 9/00](#). The individual ingredient can be either a single substance or a composition in itself.

Any ingredient of a composition which is not identified by the above classification, and which is considered to represent information of interest for search, may also be classified in groups [C11D 1/00](#) - [C11D 9/00](#).

In groups [C11D 1/02](#) - [C11D 1/94](#), [C11D 3/02](#) - [C11D 3/39](#), [C11D 7/02](#) - [C11D 7/46](#) and [C11D 9/06](#) - [C11D 9/42](#), in the absence of an indication to the contrary, classification is made in the last appropriate place.

To decide whether a composition/compound is classified in [C11D 3/00](#) or in [C11D 7/00](#) the whole document is taken into account to find out if surfactants are present or not.

Documents classified in the mixture groups [C11D 1/37](#), [C11D 1/645](#) - [C11D 1/655](#), [C11D 1/825](#) - [C11D 1/86](#), [C11D 1/94](#) - [C11D 1/945](#), [C11D 10/04](#) - [C11D 10/047](#) are also classified with additional symbols from [C11D 1/00](#) - [C11D 1/92](#) to provide information on the individual surfactant.

Special rules of classification

Compositions comprising solvent mixtures or a list of alternatives are classified in [C11D 3/43](#) or [C11D 7/50](#) and the single components are classified with additional symbols from [C11D 3/00](#) or [C11D 7/00](#).

In case of mixture or a list of alternatives in the groups [C11D 3/2003](#), [C11D 3/2006](#), [C11D 3/2041](#), [C11D 3/34](#), [C11D 3/3905](#) and [C11D 3/3907](#), individual compounds are classified with additional symbols of [C11D 3/2003](#), [C11D 3/34](#) and [C11D 3/3905](#).

Polymers are only classified in the group [C11D 3/37](#) in rare cases; dependent claims, examples and description should be taken into account and then the specific polymers should be classified.

For example, in claim 1 a polymer is claimed, in the description and dependent claims polyacrylate and carboxymethylcellulose are disclosed, the polymer is therefore classified in [C11D 3/3757](#) and [C11D 3/225](#).

The same is applied to per compounds and bleaching compounds in [C11D 3/39](#) and [C11D 3/395](#).

Carboxylic acid mixtures or alternatives are classified in [C11D 3/2075](#); if specific acids are claimed they can be classified in the specific groups.

Block copolymers such as EOPO are classified in [C11D 1/008](#) when they are used as surfactants; if they are not used as a surfactant, they are classified in [C11D 3/3707](#).

In [C11D 3/0005](#) the compounds / compositions are characterised by their effect or properties. Documents classified therein are also classified in other groups of [C11D](#) according to the chemical nature of the compounds.

In compositions comprising an unspecified surfactant and carbonates, only the carbonates are classified in [C11D 3/10](#).

In compositions comprising ethoxylated alcohol surfactant and carbonates, both the specific surfactant and the carbonates are classified in [C11D 1/72](#) and [C11D 3/10](#).

Polymers, enzymes, per compounds, bleaching agents, dyes, brightening agent and disinfecting, antibacterial, microbicial agents in compositions without surfactants are classified in [C11D 3/00](#).

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Amphoteric surfactant	Amphoteric surfactants contain both acidic and basic groups in their molecule, and can act as cationic or anionic detergents, depending on the pH of the solution, or as both cation and anion. Betains are included.
Anionic surfactant	Anionic surfactants have a negatively-charged surface-active ion. An example is sodium alkylbenzene sulfonate.
Cationic surfactant	Cationic surfactants may have a positively-charged cation; typical are the quaternary ammonium salts; they may also be amides or amines.
Compounding ingredients	The non-surface-active ingredients in a detergent composition, e.g. builder, water-softening agents, solvent.

Detergents	Detergents are basically any cleaning materials. Such materials may or may not contain surfactants. The term "synthetic detergent" is also used as a synonym for "surfactant" (excluding soaps, which are not considered synthetic), which is a compound, or a mixture of compounds, whose molecules have two distinct regions – one that is hydrophilic and has an affinity for water, and another that is hydrophobic, with little (if any) affinity for water. These compounds can aid in the solubilisation of hydrophobic compounds in water. See examples below of particular types of surfactant (detergent).
Nonionic surfactant	Non-ionic surfactants are synthetic surface active agents which are such that the molecules do not ionise in aqueous solution. Examples are ethoxylated fatty alcohols and amine oxides.
Resin soap	A yellow soap containing resin, used for bleaching. It is made by adding a certain quantity of resin (rosin or colophony), as much as 50 % and more of the fat employed, to the mass in the soap boiler towards the end of the process.
Syndet bars	Piece of hard soap made from synthetic surfactants.
Soaps	Soaps have the same properties as those mentioned above for surfactants, but in general soaps are not considered as synthetic detergents. Soap is a particular type of surfactant derived from oils and fats, and is created through the saponification process whereby the ester linkage in a vegetable oil or fat is hydrolytically cleaved using an alkali or (NaOH or KOH) or ammonia or amine yielding glycerol and crude soap. Soaps usually consist of the alkaline salts of fatty acids such as palmitic, stearic or oleic acids. Soft soaps contain the potassium salts, whereas the sodium salts are hard soaps. Soaps are examples of anionic surfactants.
Surface-active compounds/agents (surfactants)	Substances which have the effect of reducing the surface tension of a solvent, an example being a detergent/surfactant or soap dissolved in water. These substances, also known as wetting agents, contain a combination of polar (hydrophilic) and non-polar (hydrophobic) parts which serve to bind oil and water together. They locate at the phase boundary between the water phase and the organic phase, or if there is no room there, they will congregate together and form micelles. Both synthetic detergents and soaps are surfactants.
Surfactants	See "Surface-active compounds/agents".

C11D 1/00

Detergent compositions based essentially on surface-active compounds; Use of these compounds as a detergent

Definition statement

This place covers:

Detergents compositions based on surfactants, surface active agents

[C11D 1/00](#)- [C11D 1/94](#) subgroups

Special rules of classification

In groups [C11D 1/02](#) - [C11D 1/94](#), in groups [C11D 3/02](#) - [C11D 3/39](#), in groups [C11D 7/02](#) - [C11D 7/46](#) and in groups [C11D 9/06](#) - [C11D 9/42](#), in the absence of an indication to the contrary, classification is made in the last appropriate place.

C11D 1/86

Mixtures of anionic, cationic, and non-ionic compounds

Definition statement

This place covers:

A mixture with three or more compounds being anionic, cationic and non-ionic.

C11D 3/00

Other compounding ingredients of detergent compositions covered in group [C11D 1/00](#)

Definition statement

This place covers:

Components of detergent compositions that are not classified in [C11D 1/00](#), i.e. not surface-active components comprised in a mixture of surfactant and non-surfactant compounds, e.g. mixture of zeolithes and surfactants.

Special rules of classification

In groups [C11D 3/02](#) - [C11D 3/39](#), the last place priority rule is applied, i.e. at each hierarchical level, in the absence of an indication to the contrary, a compound is classified in the last appropriate place.

A mixture of surfactants, soaps with/without zeolithes is classified in [C11D 10/00](#)

C11D 3/0005

{Other compounding ingredients characterised by their effect}

Special rules of classification

Documents classified in the subgroups [C11D 3/0005](#) - [C11D 3/0094](#) are also classified in other groups of the [C11D](#) subclass according to the chemical nature of the compounds as such.

C11D 3/0078

----------------------------	----------------------

C11D 3/3905

{Bleach activators or bleach catalysts}

Special rules of classification

Bleach activators or bleach catalysts are classified according to the last place rule priority.

In case of mixtures or a list of alternatives, it is classified in [C11D 3/3905](#) or [C11D 3/3907](#) and the individual alternatives are classified with additional symbols from [C11D 3/3907](#) - [C11D 3/3932](#).

C11D 7/00

Compositions of detergents based essentially on non-surface-active compounds

Special rules of classification

In the absence of an indication to the contrary, in groups [C11D 7/02](#) - [C11D 7/46](#) a compound is classified in the last appropriate place.

C11D 7/5004

{Organic solvents}

Special rules of classification

In the subgroups [C11D 7/5004](#) - [C11D 7/5095](#), classification is made in the first appropriate place.

C11D 9/00

Compositions of detergents based essentially on soap (compositions containing resin soap [C11D 15/04](#))

Definition statement

This place covers:

Compositions of detergents with major component being soap, soap being considered as non-synthetic detergent (see definition in glossary of terms)

References

Limiting references

This place does not cover:
