## H01H

## ELECTRIC SWITCHES; RELAYS; SELECTORS; EMERGENCY PROTECTIVE DEVICES (contact cables H01B 7/10; electrolytic self-interrupters H01G 9/18; emergency protective circuit arrangements H 02 H ; switching by electronic means without contact-making H03K 17/00)

## Definition statement

This place covers:
Electric switches, i.e. single points of mechanically operable electrical connection (or interruption). Types, details and manufacture thereof, as detailed below .

Relays, i.e. switching devices having contacts which are operated from electric inputs which supply, directly or indirectly, all the mechanical energy necessary to cause both the closure and the opening of the contacts. Types, details and manufacture thereof. Circuit arrangements not adapted to a particular application of the relay and designed to obtain desired operating characteristics or to provide energising current.

Selectors, i.e. arrays of electric switches which selectively connect some inputs out of a plurality of inputs to some outputs out of a plurality of outputs. Types, details, and manufacture thereof in groups H01H 63/00, H01H 65/00 and H01H 67/00.

Protective devices like: circuit-breaking switches, protective switches, fuses, evaporation devices, details and manufacture thereof. This subclass also covers (in groups $\mathrm{H} 01 \mathrm{H} 69 / 00-\mathrm{H} 01 \mathrm{H} 87 / 00$ ) devices for the protection of electric lines or electric machines or apparatus in the event of undesired change from normal electric working conditions, the electrical condition serving directly as the input to the device.

Mechanical structural details of control members of switches or of keyboards such as keys, pushbuttons, levers or other mechanisms for transferring the force to the activated elements, even when they are used for controlling electronic switches

Circuit arrangements not adapted to a particular application of the switch and not otherwise provided for, e.g. for ensuring operation of the switch at a predetermined point in the ac cycle.

## Relationships with other classification places

Circuit arrangements for the automatic protection of electric lines or electric machines or apparatus in the event of an undesired change from normal working conditions: H 02 H

## Special rules of classification

The use of the Indexing Code scheme $\mathrm{H} 01 \mathrm{H} 1 / 00-\mathrm{H} 01 \mathrm{H} 89 / 10$ is mandatory to classify additional (non-invention) information.

The use of the deep indexing scheme $\mathrm{H} 01 \mathrm{H} 2201 / 00-\mathrm{H} 01 \mathrm{H} 2239 / 078$ is mandatory whenever appropriate.

Further information:

- Details only described with reference to, or clearly only applicable to, switching devices of a single basic type, are classified in the group appropriate to switching devices of that basic type, e.g. H01H 19/02 or H01H 75/04.

Details of an unspecified type of switching device, or disclosed as applicable to two or more kinds of switching devices designated by the terms or expressions "switches", "relays", "selector switches", and "emergency protective devices", are classified in groups $\mathrm{H} 01 \mathrm{H} 1 / 00-\mathrm{H} 01 \mathrm{H} 9 / 00$.

Details of an unspecified type of switch, or disclosed as applicable to two or more types of switches as defined by groups $\underline{H 01 H} 13 / 00-\underline{H 01 H} 43 / 00$ and subgroups $\underline{H 01 H} 35 / 02, \underline{H} 01 \mathrm{H} 35 / 06, \underline{H} 01 \mathrm{H} 35 / 14$, $\mathrm{H} 01 \mathrm{H} 35 / 18, \underline{\mathrm{H} 01 \mathrm{H} 35 / 24}$ and $\mathrm{H} 01 \mathrm{H} 35 / 42$, all hereinafter called basic types, are classified in groups H01H 1/00-H01H 9/00.

Apparatus or processes specially adapted for manufacturing of electric switches of an unspecified type are classified in group H 01 H 11/00.

Details of contact arrangements or operating mechanisms for tap changer devices are classified in the subgroup H01H 9/0005.

- Mechanical structural details of control members specially adapted for rectilinearly movable switches such as keys or push-buttons having a plurality of operating members associated with different sets of contacts, e.g. keyboards, are classified in the subgroup H01H 13/70.

Processes specially adapted for manufacturing of rectilinearly movable switches such as keys or push-buttons having a plurality of operating members associated with different sets of contacts, e.g. keyboards, are classified in the subgroup H 01 H 13/88.

Earthing or grounding switching devices are classified in the subgroup $\mathrm{H} 01 \mathrm{H} 31 / 003$.
Vacuum switches are classified in the subgroup $\mathrm{H} 01 \mathrm{H} 33 / 66$. Combinations of vacuum switches with other type of switch, e.g. for load break switches are classified in the subgroup $\mathrm{H} 01 \mathrm{H} 33 / 6661$.

- Switches actuated by change of magnetic field or of electric field are classified in the group H01H 36/00.
- Thermally-actuated switches are classified in the group $\mathrm{H} 01 \mathrm{H} 37 / 00$.

Details of an unspecified type of relay, or disclosed as applicable to two or more types of relays as defined by groups $\mathrm{H} 01 \mathrm{H} 51 / 00-\mathrm{H} 01 \mathrm{H} 61 / 00$, hereinafter called basic types, are classified in group H01H 45/00. Circuit arrangements not adapted to a particular application of the relay and designed to obtain desired operating characteristics or to provide energising current, are classified in group H01H 47/00.

Apparatus or processes specially adapted for manufacturing of relays are classified in group H01H 49/00.

- Details of an unspecified protective switch or protective relay, or applicable to two or more types of protective devices as defined by groups $\mathrm{H} 01 \mathrm{H} 73 / 00-\mathrm{H} 01 \mathrm{H} 83 / 00$, hereinafter called basic types, are classified in group $\mathrm{H} 01 \mathrm{H} 71 / 00$.

Apparatus or processes specially adapted for manufacturing of protective devices are classified in group H 01 H 69/00.

Protective devices in which the current flows through a part of fusible material and this current is interrupted by displacement of the fusible material when this current becomes excessive are classified in group $\mathrm{H} 01 \mathrm{H} 85 / 00$.

- The subgroup $\underline{H 01 H} 9 / 54$ covers circuit arrangements not adapted to a particular application of an unspecified type of switching device and for which no provision exists elsewhere, e.g. combinations of mechanical switches and static switches or for ensuring operation of the switch at a predetermined point in the ac cycle, and is residual with respect to the groups H01H 1/00- $-\underline{H 01 H} 9 / 00$ and $\mathrm{H} 01 \mathrm{H} 69 / 00-\underline{H} 01 \mathrm{H} 87 / 00$.
- The subgroup $\mathrm{H} 01 \mathrm{H} 33 / 59$ covers circuit arrangements not adapted to a particular application of a high-tension or heavy-current switch and not otherwise provided for, e.g. for ensuring operation of the switch at a predetermined point in the ac cycle, and is residual with respect to the groups H01H 31/00-H01H 33/00.
- Details only described with reference to, or clearly only applicable to, rectilinearly movable switches having operating members associated with different sets of contacts, e.g. keyboards, are classified in the deep indexing scheme for multilayer keyboard switches H01H 2201/00-H01H 2239/078.
- Details of an unspecified type of switching device, or disclosed as applicable to several kinds of switching devices or relating to the application field of the switching device are classified in a separate orthogonal indexing scheme (pending).

## Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

| Acting, actuating or action | self-induced, e.g. not manually caused, movement of parts at one <br> stage of the switching. Apply to all parts of the verbs "to operate"; <br> "to actuate", and "to act", and to words derived therefrom, e.g. to <br> "actuation" or "actuating" |
| :--- | :--- |
| Contacts | necessary elementary components of a switch that ensure the <br> electrical connection, each switch comprising at least two contacts, <br> and possibly more than two |
| Driving mechanism | means by which an operating force applied to the switch is <br> transmitted to the moving contact or contacts |
| Key | push button |
| Operating | broader sense than "actuating", including the manually caused <br> movement of parts at one stage of the switching. |
| Push button | knob or button that allows the manual operation of a switch in <br> order to e.g. close an electric circuit |
| Relay | switching device having contacts which are operated from electric <br> inputs which supply, directly or indirectly, all the mechanical <br> energy necessary to cause both the closure and the opening of the <br> contacts |
| Selector | array of electric switches which selectively connect some inputs <br> out of a plurality of inputs to some outputs out of a plurality of <br> outputs |
| Switch | single point of mechanically operable electrical connection (or <br> interruption) |
| Switch site | physical location where the contacts can touch each other |

## H01H 1/00

Contacts (liquid contacts H01H 29/04)

H01H 33/94
this movement being effected solely due to the pressure caused by the arc itself or by an auxiliary arc $\{(\mathrm{HO1H} 33 / 903$ takes precedence) $\}$

## References

## Limiting references

This place does not cover:

| The movement being effected by or in conjunction with the contact- <br> operating mechanism making use of the energy of the arc or an auxiliary <br> arc and assisting the operating mechanism | H01H 33/903 |
| :--- | :--- |

## H01H 33/98

the flow of arc-extinguishing fluid being initiated by an auxiliary arc or a section of the arc, without any moving parts for producing or increasing the flow \{(H01H 33/901 takes precedence) $\}$

## References

## Limiting references

This place does not cover:

| The movement being effected by or in conjunction with the contact- <br> operating mechanism making use of the energy of the arc or an auxiliary <br> arc | H01H 33/901 |
| :--- | :--- |

## H01H 35/00

Switches operated by change of a physical condition (operated by change of magnetic or electric field H01H 36/00; thermally-actuated switches $\mathrm{H} 01 \mathrm{H} 37 / 00$ )

## References

## Limiting references

This place does not cover:

| Operated by change of magnetic or electric field | $H 01 \mathrm{H} 36 / 00$ |
| :--- | :--- |
| Thermally-actuated switches | $\mathrm{H} 01 \mathrm{H} 37 / 00$ |

## Informative references

Attention is drawn to the following places, which may be of interest for search:

| Time switches | $\underline{\mathrm{H} 01 \mathrm{H} 43 / 00}$ |
| :--- | :--- |
| Relays | $\underline{\mathrm{H} 01 \mathrm{H} 45 / 00-\mathrm{H} 01 \mathrm{H} 61 / 00}$ |
| Sensing elements for providing continuous conversion of a variable into <br> mechanical displacement | $\underline{\mathrm{G} 01}$ |

## Special rules of classification

A switching device is classified according to that physical condition which, when changed, acts as input to the device, e.g. external explosion causing pressure wave to act upon switch is classified in group $\mathrm{H} 01 \mathrm{H} 35 / 24$, an explosion produced within the switch in group $\mathrm{H} 01 \mathrm{H} 37 / 00$ if initiated by heat, in group $\mathrm{H} 01 \mathrm{H} 39 / 00$ if initiated electrically, and in group $\mathrm{H} 01 \mathrm{H} 35 / 14$ if initiated by an external blow.

## H01H 35/02

Switches operated by change of position, inclination or orientation of the switch itself in relation to gravitational field (tilting mercury container H01H 29/20; change of position due to change of liquid level H01H 35/18)

## References

## Application-oriented references

## H01H 50/92

Thermal means (inherent in electrothermal relays H01H 61/00)

## References

## Limiting references

This place does not cover:

| Thermal means inherent in electrothermal relays | $\mathrm{H} 01 \mathrm{H} 61 / 00$ |
| :--- | :--- |

## H01H 51/00

Electromagnetic relays (relays using the dynamo-electric effect H01H 53/00)

## References

## Informative references

Attention is drawn to the following places, which may be of interest for search:

| Relays using the dynamo-electric effect | H01H 53/00 |
| :--- | :--- |

## H01H 51/01

Relays in which the armature is maintained in one position by a permanent magnet and freed by energisation of a coil producing an opposing magnetic field \{(H01H 51/02 - H01H 51/26 take precedence)\}

## Special rules of classification

H01H 51/02 - H01H 51/26 take precedence over $\underline{H 01 H} 51 / 01$.

## H01H 51/06

Armature is movable between two limit positions of rest and is moved in one direction due to energisation of an electromagnet and after the electromagnet is de-energised is returned by energy stored during the movement in the first direction, e.g. by using a spring, by using a permanent magnet, by gravity

## References

## H01H 85/044

General constructions or structure of low voltage fuses, i.e. below 1000 V, or of fuses where the applicable voltage is not specified (H01H 85/046-H01H 85/048 take precedence)

## Special rules of classification

H01H 85/046 - $\underline{H 01 H} 85 / 048$ take precedence over $\underline{H 01 H ~ 85 / 044 . ~}$
H01H 85/0445
fast or slow type (H01H 85/045-H01H 85/048 take precedence)

## Special rules of classification

H01H 85/045 - H01H 85/048 take precedence over H01H 85/0445.

## H01H 85/06

characterised by the fusible material (H01H 85/11 takes precedence)

## References

## Limiting references

This place does not cover:

## H01H 85/10

with constriction for localised fusing ( $\mathrm{H} 01 \mathrm{H} 85 / 11$ takes precedence)

## References

## Limiting references

This place does not cover:

| M-effect devices | H01H 85/11 |
| :--- | :--- |

## H01H 85/165

## Casings

## References

## Informative references

Attention is drawn to the following places, which may be of interest for search:

| Electrical contacts | $\mathrm{H} 01 \mathrm{H} \mathrm{85/143}$ |
| :--- | :--- |
| Fillings | $\mathrm{H} 01 \mathrm{H} \mathrm{85/18}$ |

## H01H 85/20

## Bases for supporting the fuse; Separate parts thereof

## References

## Informative references

Attention is drawn to the following places, which may be of interest for search:

| Bases, casings for connectors, in general | H01R |
| :--- | :--- | :--- |

## H01H 85/25

Safety arrangements preventing or inhibiting contact with live parts, including operation of isolation on removal of cover

## References

## Informative references

Attention is drawn to the following places, which may be of interest for search:

| Interlocking between casing or protective shutter of a switch and <br> mechanism for operating its contacts | $\mathrm{H} 01 \mathrm{H} 9 / 22$ |
| :--- | :--- |

## H01H 85/38

Means for extinguishing or suppressing arc (by powder filling H01H 85/18; by mechanical tension applied to fusible member $\mathrm{H} 01 \mathrm{H} 85 / 36$ )

## References

## Limiting references

This place does not cover:

| Means for extinguishing or suppressing arc by powder filling | $\mathrm{H} 01 \mathrm{H} 85 / 18$ |
| :--- | :--- |
| Means for extinguishing or suppressing arc by mechanical tension <br> applied to fusible member | $\underline{H 01 \mathrm{H} 85 / 36}$ |

## H01H 85/40

using an arc-extinguishing liquid (characterised by the composition of the liquid H01H 33/22)

## References

## Limiting references

This place does not cover:

| Arc-extinguishing liquid characterised by the composition of the liquid | $\mathrm{H} 01 \mathrm{H} 33 / 22$ |
| :--- | :--- |

## H01H 85/42

using an arc-extinguishing gas (characterised by the composition of the gas H01H 33/22)
