B23 MACHINE TOOLS; METAL-WORKING NOT OTHERWISE PROVIDED FOR (NOTES omitted)

# B23Q DETAILS, COMPONENTS, OR ACCESSORIES FOR MACHINE TOOLS, e.g. ARRANGEMENTS FOR COPYING OR CONTROLLING (tools of the kind used in lathes or boring machines <u>B23B 27/00</u>); MACHINE TOOLS IN GENERAL CHARACTERISED BY THE CONSTRUCTION OF PARTICULAR DETAILS OR COMPONENTS; COMBINATIONS OR ASSOCIATIONS OF METAL-WORKING MACHINES, NOT DIRECTED TO A PARTICULAR RESULT

## NOTES

- 1. In this subclass, groups designating parts of machine tools cover machine tools characterised by constructional features of such parts.
- 2. In this subclass, the following terms or expressions are used with the meanings indicated:
  - "controlling" means influencing a variable in any way, e.g. changing its direction or its value (including changing it to or from zero), maintaining it constant, limiting its range of variation;
  - "regulation" means maintaining a variable automatically at a desired value or within a desired range of values. The desired value or range may be fixed, or manually varied, or may vary with time according to a predetermined "programme" or according to variation of another variable. Regulation is a form of control;
  - "automatic control" is often used in the art as a synonym for regulation.
  - "Machine tool" means a mechanical working machine that removes material from a workpiece with a mechanical cutting edge to perform a shaping operation, essentially through drilling, milling, turning or cutting, e.g. sawing. The workpiece is generally made of metal, wood or plastic and is not a human body, food or clothes.
- 3. Attention is drawn to the Notes following the title of class <u>B23</u>.

#### WARNING

In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme.

# **NOTES**

- 1. In this group, the following expressions are used with the meaning indicated:
  - "sliding pair" means a pair consisting of two elements operating in such a way that only straight line movement between both elements is possible;
  - "rotating pair" means a pair consisting of two elements operating in such a way that only rotary movement between both elements is possible;
  - "screw pair" means a pair consisting of two elements operating in such a way as to produce simultaneous rotation and axial translation between both elements.
- 2. In this group, where more than one pair of elements is provided on the same axis for the same kind of movement, the pairs are regarded as a single pair for the purposes of classification.

Accessories	
11/00	Accessories fitted to machine tools for keeping tools or parts of the machine in good working condition or for cooling work {(accessories specially
	designed for sawing machines or sawing devices

designed for sawing machines or sawing devices <u>B23D 59/00</u>); Safety devices specially combined with or arranged in, or specially adapted for use in connection with, machine tools (in respect of boring or drilling machines <u>B23B 47/32</u> takes precedence; safety devices in general <u>F16P</u>)

11/0003 • {Arrangements for preventing undesired thermal effects on tools or parts of the machine (B23Q 11/10, B23Q 11/12 and B23Q 11/14 take precedence)}

#### Accessories

11/0007	• {by compensating occurring thermal dilations (B23Q 15/18 takes precedence)}
11/001	• {Arrangements compensating weight or flexion on
11/001	parts of the machine (adjustment of the fluid layer
	in fluid bearings or cushions depending upon the
11/0014	position of a weight <u>B23Q 1/385</u> )}
11/0014	• {using static reinforcing elements, e.g. pre- stressed ties}
11/0017	• • {compensating the weight of vertically moving
	elements, e.g. by balancing liftable machine parts
	$(\underline{B23B} 47/26 \text{ takes precedence})$
11/0021	• • { the elements being rotating or pivoting }
11/0025	• • {using resilient means, e.g. springs, hydraulic
	dampers}
11/0028	• • {by actively reacting to a change of the
11,0020	configuration of the machine ( $B23Q 15/00$ takes
	precedence)}
11/0032	• {Arrangements for preventing or isolating
11/0052	vibrations in parts of the machine ( $B23B 29/022$ ,
	<u>B23D 47/005</u> take precedence; means for damping
	or suppressing vibrations, in general <u>F16F</u> )}
11/0025	
11/0035	• • {by adding or adjusting a mass, e.g.
	counterweights}
11/0039	• • {by changing the natural frequency of the system
	or by continuously changing the frequency of the
	force which causes the vibration}
11/0042	• {Devices for removing chips ( <u>B23Q 11/02</u> ,
	<u>B23Q 11/0875</u> take precedence)}
11/0046	• {by sucking}
11/005	• • {by blowing}
11/0053	• • {using the gravity force}
11/0057	• • {outside the working area}
11/006	• • {by sucking and blowing simultaneously}
11/0064	• {by using a magnetic or electric field}
11/0067	<ul> <li>. {chip containers located under a machine or</li> </ul>
11/0007	under a chip conveyor}
11/0071	<ul> <li>{dust collectors for hand tools}</li> </ul>
11/0071	<ul> <li>. {for removing chips or coolant from the</li> </ul>
11/0075	workpiece after machining}
11/0079	
11/0078	• {Safety devices protecting the operator, e.g. against
	accident or noise (protecting the machine tool
	<b>B23Q</b> 5/58; protecting people, in general F16P 1/00, E1 (D 2/00)
	<u>F16P 3/00</u> )}
11/0082	• • {by determining whether the operator is in
	a dangerous position ( <u>B23Q 17/2438</u> takes
	precedence)}
11/0085	• • {by determining whether the machine tool is in a
	dangerous configuration}
11/0089	• • {actuating operator protecting means, e.g. closing
	a cover element, producing an alarm signal}
11/0092	• • {actuating braking or stopping means}
11/0096	• • {protecting against noise}
11/02	. Devices for removing scrap from the cutting teeth of
	circular {or non-circular} cutters
11/04	• Arrangements preventing overload of tools, e.g.
	restricting load
11/06	• Safety devices for circular cutters
11/08	• Protective coverings for parts of machine tools;
11,00	Splash guards
2011/0808	• • {Means for maintaining identical distances
2011/0000	between relatively movable cover parts}
11/0016	
11/0816	• {Foldable coverings, e.g. bellows}
11/0825	• {Relatively slidable coverings, e.g. telescopic}
11/0833	• • { with a non-rectilinear shifting }

11/0841	• • • {with spirally wound coverings}
11/085	• • {Flexible coverings, e.g. coiled-up belts}
11/0858	• • {using a liquid bath or a liquid curtain}
11/0866	• • {using covering means adaptable to the
	workpieces, e.g. curtains or bristles}
11/0875	• • {Wipers for clearing foreign matter from
	slideways or slidable coverings}
11/0883	• • {for spindles, e.g. for their bearings or casings}
11/0891	• • {arranged between the working area and the
11/10	operator}
11/10	Arrangements for cooling or lubricating tools     or work (incorporated in tools, see the relevant
	subclass for the tool {, e.g. $\underline{B23B} 27/10$ ,
	<u>B23B 51/06, B23C 5/28, B23D 77/006;</u> for circular
	saw blades <u>B23D 59/02</u> , for cooling grinding
	surfaces $\underline{B24B}$ 55/02})
11/1007	• {by submerging the tools or work partially or
11,100,	entirely in a liquid}
11/1015	• • {by supplying a cutting liquid through the
	spindle}
11/1023	• • • {Tool holders, or tools in general specially
	adapted for receiving the cutting liquid from
	the spindle }
11/103	{Rotary joints specially adapted for feeding the
	cutting liquid to the spindle}
11/1038	• • {using cutting liquids with special characteristics,
11/1046	e.g. flow rate, quality}
11/1046	• • • { using a minimal quantity of lubricant
	(spraying apparatus using a carrying fluid B05B 7/00)}
11/1053	• • • {using the cutting liquid at specially selected
11/1055	temperatures (controlling the temperature of the
	cutting liquid for maintaining machine parts at
	a constant temperature <u>B23Q 11/146</u> )}
11/1061	• • • {using cutting liquids with specially selected
	composition or state of aggregation}
11/1069	• • {Filtration systems specially adapted
	for cutting liquids (filtration in general
	<u>B01D 24/00</u> - <u>B01D 41/00</u> )}
11/1076	• • {with a cutting liquid nozzle specially adaptable
	to different kinds of machining operations}
11/1084	• • {specially adapted for being fitted to different
	kinds of machines}
11/1092	• • {specially adapted for portable power-driven
11/10	tools}
11/12	<ul> <li>Arrangements for cooling or lubricating parts of the machine (<u>B23Q 11/14</u> takes precedence {; movable</li> </ul>
	work or tool supports using fluid bearings or fluid
	cushion supports <u>B23Q 1/38</u> ; cooling or lubricating
	means used in the working area $\underline{B23Q \ 11/10}$ }
11/121	• • {with lubricating effect for reducing friction
	( <u>F16C 33/66</u> and <u>F16H 57/04</u> take precedence)}
11/122	• • {Lubricant supply devices ( <u>F16N 7/00</u> takes
	precedence)}
11/123	• • • { for lubricating spindle bearings ( $F16C 33/66$
	takes precedence)}
11/124	• • • {for lubricating linear guiding systems
	$(\underline{F16C \ 29/005} \text{ takes precedence})$
11/125	• • • {for lubricating ball screw systems}
11/126	• • {for cooling only}
11/127	• • • {for cooling motors or spindles}
11/128	{for cooling frame parts}
11/14	• Methods or arrangements for maintaining a constant
	temperature in parts of machine tools

11/141	<ul> <li>{using a closed fluid circuit for cooling or heating}</li> </ul>
11/143	• • {comprising heating means}
11/145	• • {using a jet of gas or cutting liquid}
11/146	• {by controlling the temperature of a cutting liquid}
11/148	• • {by controlling the air temperature}
13/00	Equipment for use with tools or cutters when not in operation, e.g. protectors for storage {( <u>B26B 29/00</u> takes precedence)}

## Measuring; Indicating; Controlling

15/00	Automatic control or regulation of feed movement,
	cutting velocity or position of tool or work
	(programme-control G05B 19/00, e.g. numerical
	programme-control G05B 19/18)
15/007	• while the tool acts upon the workpiece
15/0075	• • {Controlling reciprocating movement, e.g. for planing-machine}
15/013	. Control or regulation of feed movement
	(B23Q 15/12 takes precedence)
15/02	• • • according to the instantaneous size and the required size of the workpiece acted upon (B23Q 15/06 takes precedence)
15/04	<ul> <li>according to the final size of the previously- machined workpiece (<u>B23Q 15/06</u> takes precedence)</li> </ul>
15/06	• • • according to measuring results produced by two or more gauging methods using different measuring principles, e.g. by both optical and mechanical gauging
15/08	Control or regulation of cutting velocity     ( <u>B23Q 15/12</u> takes precedence)
15/10	• • to maintain constant cutting velocity between tool and workpiece
15/12	• Adaptive control, i.e. adjusting itself to have a performance which is optimum according to a preassigned criterion
15/14	• Control or regulation of the orientation of the tool with respect to the work
15/16	• Compensation for wear of the tool
15/18	. Compensation of tool-deflection due to
	temperature or force
15/20	• before or after the tool acts upon the workpiece
15/22	Control or regulation of position of tool or workpiece
15/225	• • { in feed control, i.e. approaching of tool or work in successive decreasing velocity steps }
15/24	• • • of linear position
15/26	• • • of angular position
15/28	• • with compensation for tool wear
16/00	Equipment for precise positioning of tool or work into particular locations not otherwise provided
	for (automatic control or regulation of position of tool
	or work <u>B23Q 15/22</u> ; arrangements for indicating or
	measuring existing or desired position of tool or work
16/001	<u>B23Q 17/22</u> )
16/001	• {Stops, cams, or holders therefor}
16/002	• {Stops for use in a hollow spindle}
16/003	• {with means to return a tool back, after its withdrawal movement, to the previous working

16/004	• {positioning by combining gauges of different dimensions from a set of two or more gauges}
16/005	<ul> <li>{Equipment for measuring the contacting force or the distance before contacting between two</li> </ul>
	members during the positioning operation }
16/006	<ul> <li>{positioning by bringing a stop into contact with one of two or more stops, fitted on a common carrier}</li> </ul>
16/007	• {Positioning by sine tables}
16/008	• {Cushioning the abutting movement}
16/02	• Indexing equipment (specially adapted for gear- cutting machines <u>B23F 23/08</u> )
16/021	• {in which only the positioning elements are of importance ( <u>B23Q 16/04</u> , <u>B23Q 16/08</u> take precedence)}
16/022	• • {in which only the indexing movement is of
16/023	<ul><li>importance}</li><li>• {by converting a reciprocating or oscillating</li></ul>
	movement into or linear indexing movement}
16/024	• • • {and by converting a continuous movement into a linear indexing movement}
16/025	• • {by converting a continuous movement into a rotary indexing movement}
16/026	• • • {by converting a reciprocating or oscillating
,	movement into a rotary indexing movement}
16/027	• • { with means for adjusting the distance between
	two successive indexing-points}
16/028	• • {with positioning means between two successive indexing-points}
16/04	• • having intermediate members, e.g. pawls, for
	locking the relatively movable parts in the
	indexed position
16/043	• • • {with a reciprocating or oscillating drive (B23Q 16/06 takes precedence)}
16/046	• • • {with a continuous drive ( $\underline{B23Q 16/06}$ takes
	precedence)}
16/06	Rotary indexing
16/065	• • • • {with a continuous drive}
16/08	having means for clamping the relatively movable
	parts together in the indexed position
16/083	• • • {with a reciprocating or oscillating drive (B23Q 16/10 takes precedence)}
16/086	• • • { with a continuous drive ( $\underline{B23Q \ 16/10}$ takes
	precedence)}
16/10	Rotary indexing
16/102	• • • • {with a continuous drive}
16/105	•••• {clamping with a disc brake}
16/107	•••• {clamping with a drum brake}
16/12	• • using optics
17/00	Arrangements for {observing,} indicating or
	measuring on machine tools (for automatic control
	or regulation of feed movement, cutting velocity or
	position of tool or work <u>B23Q 15/00</u> )
2017/001	• {Measurement or correction of run-out or eccentricity}
17/002	• {for indicating or measuring the holding action of
	work or tool holders ( <u>B23Q 3/16</u> takes precedence)}
17/003	• • {by measuring a position}
17/005	• • {by measuring a force, a pressure or a deformation}
17/006	• {for indicating the presence of a work or tool in its holder ( <u>B23Q 17/002</u> , <u>B23Q 17/09</u> take
	precedence)}

position}

17/007	• {for managing machine functions not concerning the tool}
17/008	• • {Life management for parts of the machine (tool
17/00	life management <u>B23Q 17/0995</u> )}
17/09	<ul> <li>for indicating or measuring cutting pressure or {for determining} cutting-tool condition, e.g. cutting ability, load on tool (arrangements</li> </ul>
	preventing overload of tools <u>B23Q 11/04</u> ; devices for indicating failure of drills during boring
17/0004	<u>B23B 49/00</u> )
17/0904	{before or after machining}
17/0909 17/0914	{Detection of broken tools}
	• • • {Arrangements for measuring or adjusting cutting-tool geometry machine tools}
17/0919	• • • {Arrangements for measuring or adjusting cutting-tool geometry in presetting devices}
17/0923	{Tool length}
17/0928	{Cutting angles of lathe tools}
17/0933	• • • {Cutting angles of milling cutters}
17/0938	{Cutting angles of drills}
17/0942	{Cutting angles of saws}
17/0947	• • • {Monitoring devices for measuring cutting angles}
17/0952	• • {during machining}
17/0957	• • • {Detection of tool breakage (detecting failure of drills <u>B23B 49/001</u> )}
17/0961	• • • {by measuring power, current or torque of a motor}
17/0966	• • • {by measuring a force on parts of the machine other than a motor}
17/0971	• • • {by measuring mechanical vibrations of parts of the machine (arrangements for measuring vibrations <u>B23Q 17/12</u> )}
17/0976	{Detection or control of chatter ( <u>B23Q 15/12</u> takes precedence)}
17/098	• • • {by measuring noise}
17/0985	• • • {by measuring temperature}
17/099	{by measuring features of the machined
	workpiece (arrangements for measuring workpiece characteristics <u>B23Q 17/20</u> )}
17/0995	• • {Tool life management}
17/10	• for indicating or measuring cutting speed or number of revolutions
17/12	<ul> <li>for indicating or measuring vibration</li> </ul>
17/20	<ul> <li>for indicating or measuring workpiece characteristics, e.g. contour, dimension, hardness</li> </ul>
17/22	<ul> <li>for indicating or measuring existing or desired position of tool or work {(<u>B23Q 16/005</u> takes precedence)}</li> </ul>
17/2208	• {Detection or prevention of collisions}
17/2216	• • {for adjusting the tool into its holder
	(B23Q 17/0923 - B23Q 17/0942 takes precedence)}
17/2225	• • { with the toolholder as reference-element }
17/2233	• • {for adjusting the tool relative to the workpiece}
17/2241	• • {Detection of contact between tool and workpiece}
17/225	• • • {of a workpiece relative to the tool-axis}
17/2258	• • • {the workpiece rotating during the
	adjustment relative to the tool axis}
17/2266	• • • {of a tool relative to a workpiece-axis}
17/2275	• • • {of a tool-axis relative to a workpiece-axis}
17/2283	• { for adjusting the distance between coaxially
	rotating tools}

	thereo1}
17/24	<ul> <li>using optics {or electromagnetic waves}</li> </ul>
17/2404	• • {Arrangements for improving direct observation
	of the working space, e.g. using mirrors or lamps
	(structural combinations of lighting devices
	with other articles, not otherwise provided for,
	<u>F21V 33/00</u> )}
17/2409	• • {Arrangements for indirect observation of the
	working space using image recording means, e.g.
	a camera}
17/2414	• • {for indicating desired positions guiding the
	positioning of tools or workpieces (B25H 1/0092
	takes precedence)}
17/2419	• • {by projecting a single light beam}
17/2423	<ul> <li>(by projecting a single light beams)</li> <li>(by projecting crossing light beams)</li> </ul>
17/2428	• • { for measuring existing positions of tools or
	workpieces}
17/2433	• • {Detection of presence or absence}
17/2438	• • • {of an operator or a part thereof}
17/2442	• • • {of a tool}
17/2447	• • • {of a workpiece}
17/2452	• • { for measuring features or for detecting a
	condition of machine parts, tools or workpieces
	( <u>B23Q 17/2428</u> , <u>B23Q 17/2433</u> take precedence)}
17/2457	• • • {of tools}
17/2461	• • • • {Length}
17/2466	• • • • {Diameter}
17/2471	• • • • • • • • • • • • • • • • • • •
17/2476	<ul> <li>• (of workpreces)</li> <li>• (of clamping devices, e.g. work or tool</li> </ul>
1//24/0	holders}
17/248	• {using special electromagnetic means or
17/240	methods}
17/2485	• • • {using interruptions of light beams}
17/2403	<ul> <li>. (using image analysis, e.g. for radar, infrared</li> </ul>
17/249	or array camera images}
17/2495	• • {using interferometers}
<b>22</b> /00	
23/00	Arrangements for compensating for irregularities
	or wear, e.g. of ways, of setting mechanisms
	(automatic control <u>B23Q 15/00</u> )
27/00	Geometrical mechanisms for the production of
	work of particular shapes, not fully provided for in
	another subclass
27/003	• {of conical non-circular section manufactured by
21/005	an apparatus with a first rotational cutting vector
	and a second linear feed vector, intersecting the first
	vector}
27/006	,
27/006	• {by rolling without slippage two bodies of particular
	shape relative to each other}
<u>Copying</u>	
NOTE	
TIOTE	

In groups <u>B23Q 33/00</u> or <u>B23Q 35/00</u>, the following term is used

• "copying" covers the derivation of a required shape from a pattern, of the same or a different shape or scale, by a mechanism or equivalent means controlled by a member following the pattern. The pattern may be a model or drawing, or an element such as a cam incorporated in the operating mechanism of a machine. This term does not cover the derivation of a required shape from simple geometrical shapes,

with the meaning indicated:

17/2291

# **B23Q** • • {for adjusting the workpiece relative to the holder

e.g. generating a cycloid by a rolling circle, which in general is provided for in group  $\underline{B23Q} \ \underline{27/00}$ 

33/00	Methods for copying
35/00	Control systems or devices for copying directly
	from a pattern or a master model; Devices for use in copying manually {(copy milling classified also in D27C 5 (002)]
35/005	<u>B27C 5/003</u> )}
35/005	<ul><li>{Copying by a curve composed of arcs of circles}</li><li>Copying discrete points from the pattern, e.g. for</li></ul>
55/02	determining the position of holes to be drilled
35/04	• using a feeler or the like travelling along the outline
55/04	of the pattern, model or drawing; Feelers, patterns,
	or models therefor
35/06	• specially adapted for controlling successive
25/09	operations, e.g. separate cuts, on a workpiece
35/08	• Means for transforming movement of the feeler or the like into feed movement of tool or work
35/10	• • • mechanically only
35/10	{ with a pattern composed of one or more
55/101	lines used simultaneously for one tool
35/102	• • • • • {of one line}
35/102	•••••• {which turns continuously}
35/103	••••••••••••••••••••••••••••••••••••••
35/104	{of two lines}
35/105	••••••••••••••••••••••••••••••••••••••
	rotating about parallel axis}
35/107	••••• {tool and feelers being coaxial}
35/108	• • • • {of three or more lines}
35/109	• • • { with a continuously turning pattern (B23Q 35/101 takes precedence) }
35/12	involving electrical means (programme
	recording for copying purposes in a separate
35/121	apparatus <u>G05</u> , <u>G11</u> ) using mechanical sensing
35/121	using mechanical sensing     the feeler opening or closing electrical
	contacts
35/123	• • • • • the feeler varying the impedance in a circuit
35/124	• • • • • varying resistance
35/125	••••• varying capacitance
35/126	••••• varying inductance
35/127	• • • • using non-mechanical sensing
35/128	Sensing by using optical means
35/129	Sensing by means of electric discharges
35/13	Sensing by using magnetic means
35/14	controlling one or more electromotors
35/16	controlling fluid motors
35/18	• • • involving fluid means ( <u>B23Q 35/16</u> takes precedence)
35/181	• • • { with a pattern composed of one or more lines used simultaneously }
35/183	•••• {of one line}
35/185	••••• {turning continuously}
35/186	• • • • • {of two lines}
35/188	• • • • {with a continuously turning pattern
	(B23Q 35/181 takes precedence)}
35/20	• • • with special means for varying the ratio of
	reproduction
35/22	• • • specially adapted for compensating for wear of the tool
35/24	• Feelers; Feeler units

35/2	.6	• designed for a physical contact with a pattern or a model
35/2	. 8	• • • for control of a mechanical copying system
35/3	•0 •	• • for control of an electrical or electro- hydraulic copying system
35/3	2.	in which the feeler makes and breaks an electrical contact or contacts, e.g. with brush-type tracers
35/3	4.	in which the feeler varies an electrical characteristic in a circuit, e.g. capacity, frequency
35/3	6.	• • for control of a hydraulic or pneumatic copying system
35/3	8.	• designed for sensing the pattern, model, or drawing without physical contact (sensing by means of a fluid jet <u>B23Q 35/36</u> )
35/4	. 0	involving optical or photoelectrical systems
35/4	2.	• Patterns; Masters models
35/4	4.	• provided with means for adjusting the contact face, e.g. comprising flexible bands held by set-screws
35/4	6.	• • Supporting devices therefor
35/4	.8	using a feeler or the like travelling to-and-fro between opposite parts of the outline of the pattern, model or drawing

<u>Metal-working machines comprising units or sub-assemblies;</u> <u>Associations of metal-working machines or units</u>

37/00	Metal-working machines, or constructional combinations thereof, built-up from units designed so that at least some of the units can form parts of different machines or combinations; Units therefor in so far as the feature of interchangeability is important (features relating to particular metal- working operations, <u>see</u> the relevant subclass, e.g. B23P 23/00)
37/002	<ul> <li>{Convertible machines, e.g. from horizontally working into vertically working (<u>B27B 5/165</u>: convertible sawing devices)}</li> </ul>
37/005	• {Modular base frames}
37/007	• {Modular machining stations designed to be linked to each other}
39/00	Metal-working machines incorporating a plurality
	of sub-assemblies, each capable of performing a
	metal-working operation (B23Q 33/00, B23P 23/00
	take precedence)
2039/002	• {Machines with twin spindles}
2039/004	• {Machines with tool turrets}
2039/006	• {Machines with multi-spindles}
2039/008	• {Machines of the lathe type}
39/02	• the sub-assemblies being capable of being brought to act at a single operating station
39/021	• • {with a plurality of toolheads per workholder, whereby the toolhead is a main spindle, a multispindle, a revolver or the like}
39/022	•••• { with same working direction of toolheads on same workholder }
39/023	• • • • {simultaneous working of toolheads}
39/024	• • • {consecutive working of toolheads}
39/025	• • • {with different working directions of toolheads on same workholder}
39/026	• • • { simultaneous working of toolheads }
39/027	{consecutive working of toolheads}

units	6 · · · · · · · · · · · · · · · · · · ·
39/028	• • {with a plurality of workholder per toolhead in operating position (with only one workholder in operating position <u>B23Q 1/66</u> )}
39/029	• • • { with a twin table for alternatively working on one of the tables }
39/04	• the sub-assemblies being arranged to operate simultaneously at different stations, e.g. with an annular work-table moved in steps (associations of machines connected only by work-transferring means <u>B23Q 41/00</u> )
39/042	• • {with circular arrangement of the sub-assemblies}
39/044	••• {having at least one tool station cooperating with each work holder, e.g. multi-spindle lathes}
39/046	• • • {including a loading and/or unloading station}
39/048	• • {the work holder of a work station transfers
	directly its workpiece to the work holder of a following work station}
<b>41/00</b> 41/02	Combinations or associations of metal-working machines not directed to a particular result according to classes <u>B21</u> , <u>B23</u> , or <u>B24</u> ( <u>B23Q 37/00</u> , <u>B23Q 39/00</u> take precedence; features relating to operations performed, if the different metal-working operations are of the same kind, <u>see</u> the subclass for the kind of operation, e.g. punching <u>B21D</u> , welding <u>B23K</u> , grinding <u>B24B</u> ; features relating to technically specified combinations of different metal-working operations <u>B23P 23/00</u> ) . Features relating to transfer of work between
	machines (arrangements for handling work for machine tools coordinated in production lines <u>B23Q 7/14</u> )
41/04	• Features relating to relative arrangements of machines
41/06	<ul> <li>Features relating to organisation of working of machines</li> </ul>
41/08	• Features relating to maintenance of efficient operation
2210/00	Machine tools incorporating a specific component
2210/002	• Flexures
2210/004	• Torque motors
2210/006	Curved guiding rails
2210/008	• Flexible guiding rails

2220/00	Machine tool components
2220/002	• Tool turrets
2220/004	• Rotary tables
2220/006	Spindle heads
2220/008	• Rotatable tool holders coupled in parallel to a non
	rotating accessory
2230/00	Special operations in a machine tool
2230/002	• Using the spindle for performing a non machining
2230/002	or non measuring operation, e.g. cleaning, actuating
2230/002	
2230/002 2230/004	or non measuring operation, e.g. cleaning, actuating
	or non measuring operation, e.g. cleaning, actuating a mechanism
	<ul><li>or non measuring operation, e.g. cleaning, actuating a mechanism</li><li>Using a cutting tool reciprocating at high speeds,</li></ul>
2230/004	<ul><li>or non measuring operation, e.g. cleaning, actuating a mechanism</li><li>Using a cutting tool reciprocating at high speeds, e.g. "fast tool"</li></ul>

2240/00	37 1 1 . 11 . 16
2240/00	Machine tools specially suited for a specific kind of
2240/002	workpiece
2240/002	• Flat workpieces
2240/005	Flexible, deformable workpieces
2240/007	. Elongated workpieces
2701/00	Members which are comprised in the general
	build-up of a form of the machine
2701/01	• Frames or slideways for lathes; Frames for boring
	machines
2701/02	• Movable or adjustable work or tool supports for
	milling machines, their drive, control or guiding
2701/025	Work-tables rotating around an axis vertical to the
	surface of the table; this kind of table comprising
2701/04	a divider, indexer or positioning means
2701/04	• Support braces for a milling machine
2701/06	• Tailstock for the spindle of a milling machine
2703/00	Work clamping
2703/02	• Work clamping means
2703/04	• • using fluid means or a vacuum
2703/06	• • Mandrels with non rotatable claws; Mandrels
	with internal clamping; Clamping elements
2703/08	• • Devices for clamping a plurality of workpieces
2703/10	• • Devices for clamping workpieces of a particular
	form or made from a particular material
2703/105	for clamping a crankshaft
2703/12	Accessories for attaching
2705/00	Driving working spindles or feeding members
	carrying tools or work
2705/005	• General aspects of driving arrangements in a lathe,
	e.g. indexing the spindle, devices for keeping the
	cutting speed constant, braking or reversing devices
2705/02	Driving working spindles
2705/023	• • General aspects of driving a boring spindle
2705/026	• • Main drive for the spindles of milling machines
2705/04	• • by fluid pressure
2705/043	for lathes
2705/046	for broaching machines
2705/06	• • Mechanical drives with means for varying the
	speed ratio
2705/062	• • • for lathes
2705/064	mechanically controlled
2705/066	fluid pressure controlled
2705/068	electrically controlled
2705/08	• Devices for preselecting speed in gear boxes of lathes
2705/10	• Feeding members carrying tools or work
2705/10	<ul> <li>reeding members carrying tools of work</li> <li>for lathes</li> </ul>
2705/102	<ul> <li>for milling machines</li> </ul>
2705/104	for planing machines
2705/100	<ul> <li>for slotting or mortising machines</li> </ul>
2705/100	Fluid-pressure drives
2705/12	for milling machines
2705/122	for planing machines
2705/125	<ul> <li>for slotting or mortising machines</li> </ul>
2705/127	Electric drives
2705/14	for milling machines
2705/145	Feeding working spindles
2705/165	General aspects of feeding a boring spindle
2705/18	<ul> <li>Feeding other members supporting tools also</li> </ul>
	feeding working spindles supports
2705/182	• • • in lathes

2705/185	Clutches
2705/187	Automatic clutches
2705/20	• • • Gear boxes for thread cutting lathes with a lead
2705/22	screw  Limiting feed movement of a boring spindle
2705/22	<ul> <li>General aspects of limiting the carriage movement</li> </ul>
2703/24	in lathes
2705/26	• Stopping the feed in case of overload or a break in a
	boring machine
2707/00	Automatic supply or removal of metal workpieces
2707/003	. in a lathe
2707/005	<ul> <li>for thread cutting, e.g. bolts or crews</li> </ul>
2707/00	<ul> <li>Drive</li> </ul>
2707/025	• Driving by vibration, shaking or jotting
2707/04	• by means of grippers also magnetic or pneumatic
	gripping
2707/05	• by means of roller ways
2707/06	. by means of magazines for plates
2707/16	. Devices for organising or spreading out workpieces
	on a conveyor; Devices for placing the pieces at
	predetermined intervals or devices for forming a
	regular flow of the pieces
2709/00	Portable machines or devices for the cylindrical
	bores of valve bodies
2716/00	Equipment for precise positioning of tool or work
2110/00	into particular locations
2716/02	• Devices for the axial positioning of the turret in a
	lathe; Devices for rotating and blocking the turret
2716/04	. Indexing devices for boring machines
2716/06	. Headstock dividers or devices for dividing in
2716/06	5
	milling machines
2716/08	milling machines <ul> <li>Holders for tools or work comprising a divider or</li> </ul>
