C09 DYES; PAINTS; POLISHES; NATURAL RESINS; ADHESIVES; COMPOSITIONS NOT OTHERWISE PROVIDED FOR; APPLICATIONS OF MATERIALS NOT OTHERWISE PROVIDED FOR

C09D COATING COMPOSITIONS, e.g. PAINTS, VARNISHES OR LACQUERS; FILLING PASTES; CHEMICAL PAINT OR INK REMOVERS; INKS; CORRECTING FLUIDS; WOODSTAINS; PASTES OR SOLIDS FOR COLOURING OR PRINTING; USE OF MATERIALS THEREFOR (cosmetics A61K; processes for applying liquids or other fluent materials to surfaces, in general, B05D; staining wood B27K 5/02; glazes or vitreous enamels C03C; natural resins, French polish, drying-oils, driers, turpentine, per se, C09F; polishing compositions other than French polish, ski waxes C09G; adhesives or use of materials as adhesives C09J; materials for sealing or packing joints or covers C09K 3/10; materials for stopping leaks C09K 3/12; processes for the electrolytic or electrophoretic production of coatings C25D)

### NOTES

- 1. In this subclass, the following terms or expressions are used with the meanings indicated:
  - "use of materials for coating compositions" means the use of known or new polymers or products;
  - "rubber" includes:
    - a. natural or conjugated diene rubbers;
    - b. rubber in general (for a specific rubber, other than a natural rubber or a conjugated diene rubber, see the group provided for coating compositions based on such macromolecular compounds);
      - "based on" is defined by means of Note (3), below;
      - "filling pastes" means materials used to fill up the holes or cavities of a substrate in order to smooth its surface prior to coating.
- 2. In this subclass, coating compositions, containing specific organic macromolecular substances are classified only according to the macromolecular substance, non-macromolecular substances not being taken into account.

Example: a coating composition containing polyethene and amino-propyltrimethoxysilane is classified in group <u>C09D 123/06</u>.

However, coating compositions containing combinations of organic non-macromolecular compounds having at least one polymerisable carbon-to-carbon unsaturated bond with prepolymers or polymers other than unsaturated polymers of groups  $\underline{C09D \ 159/00} - \underline{C09D \ 187/00}$  are classified according to the unsaturated non-macromolecular component in group  $\underline{C09D \ 4/00}$ .

Example: a coating composition containing polyethene and styrene monomer is classified in group  $\underline{\text{C09D 4/00}}$ . Aspects relating to the physical nature of the coating compositions or to the effects produced, as defined in group  $\underline{\text{C09D 5/00}}$ , if clearly and explicitly stated, are also classified in this subclass.

Coating compositions characterised by other features, e.g. additives, are classified in group <u>C09D 7/00</u>, unless the macromolecular constituent is specified.

3. In this subclass, coating compositions comprising two or more macromolecular constituents are classified according to the macromolecular constituent or constituents present in the highest proportion, i.e. the constituent on which the composition is based. If the composition is based on two or more constituents, present in equal proportions, the composition is classified according to each of these constituents.

Example: a coating composition containing 80 parts of polyethene and 20 parts of polyvinylchloride is classified in group  $\underline{\text{C09D } 123/06}$ . A coating composition containing 40 parts of polyethene and 40 parts of polyvinylchloride is classified in groups  $\underline{\text{C09D } 123/06}$  and  $\underline{\text{C09D } 127/06}$ .

- 4. In groups <u>C09D 101/00</u> <u>C09D 201/00</u>, any macromolecular constituent of a coating composition which is not identified by the classification according to Note (3) after the title of subclass <u>C09D</u>, and the use of which is determined to be novel and non-obvious, must also be classified in a group chosen from groups <u>C09D 101/00</u> <u>C09D 201/00</u>.
  - {This Note corresponds to IPC Note (1) relating to C09D 101/00 C09D 201/00.}
- 5. Any macromolecular constituent of a coating composition which is not identified by the classification according to Note (3) after the title of subclass <u>C09D</u> or Note (1) above, and which is considered to represent information of interest for search, may also be classified in a group chosen from groups <u>C09D 101/00</u> <u>C09D 201/00</u>. This can for example be the case when

C09D

C09D

(continued)

it is considered of interest to enable searching of coating compositions using a combination of classification symbols. Such non-obligatory classification should be given as "additional information." {This Note corresponds to IPC Note (2) relating to C09D 101/00 - C09D 201/00.}

 In groups <u>C09D 165/00</u> - <u>C09D 185/00</u>, in the absence of an indication to the contrary, coating compositions based on macromolecular compounds obtained by reactions forming two different linkages in the main chain are classified only according to the linkage present in excess.

{This Note corresponds to IPC Note (1) relating to C09D 165/00 - C09D 185/00.}

- {In this subclass, combination sets [C-Sets] are used. Detailed information about the CSets construction and the associated syntax rules is found in the definitions for <u>C09D</u>.}
- 8. {In addition to Note (4) above <u>C08L 2666/00</u> indexing codes were used for C-Sets classification of documents before April 2012. See C-Sets Search Rules in <u>C08L</u>, in <u>C09D</u>, or in <u>C09J</u> Definitions.}
