CPC COOPERATIVE PATENT CLASSIFICATION

F MECHANICAL ENGINEERING; LIGHTING; HEATING; WEAPONS; BLASTING (NOTE omitted)

LIGHTING; HEATING

F25 REFRIGERATION OR COOLING; COMBINED HEATING AND REFRIGERATION SYSTEMS; HEAT PUMP SYSTEMS; MANUFACTURE OR STORAGE OF ICE; LIQUEFACTION SOLIDIFICATION OF GASES

F25B REFRIGERATION MACHINES, PLANTS OR SYSTEMS; COMBINED HEATING AND REFRIGERATION SYSTEMS; HEAT PUMP SYSTEMS

Compression machines, plants or systems

| 1/00 | Compression machines, plants or systems with non-reversible cycle (<u>F25B 3/00, F25B 5/00</u> , |
|--|--|
| | F25B 6/00, F25B 7/00, F25B 9/00 take precedence) |
| 1/005 | • {of the single unit type (<u>F25B 1/10</u> takes precedence)} |
| 1/02 | • with compressor of reciprocating-piston type |
| | ({ <u>F25B 1/005</u> ,} <u>F25B 1/10</u> take precedence) |
| 1/04 | with compressor of rotary type ({ <u>F25B 1/005</u> ,} <u>F25B 1/10</u> take precedence) |
| 1/047 | • • of screw type |
| 1/053 | • • of turbine type |
| 1/06 | • with compressor of jet type, e.g. using liquid under pressure ({ <u>F25B 1/005</u> ,} <u>F25B 1/10</u> take precedence) |
| 1/08 | • using vapour under pressure |
| 1/10 | • with multi-stage compression (with cascade |
| | operation F25B 7/00) |
| 3/00 | Self-contained rotary compression machines, i.e. with compressor, condenser and evaporator rotating as a single unit |
| 5/00 | Compression machines, plants or systems, with |
| | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation F25B 7/00) |
| 5/02 | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation F25B 7/00) |
| 5/02 5/04 | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation |
| | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation F25B 7/00) arranged in parallel |
| 5/04 | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation F25B 7/00) arranged in parallel arranged in series Compression machines, plants or systems, with |
| 5/04 6/00 | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation F25B 7/00) arranged in parallel arranged in series Compression machines, plants or systems, with several condenser circuits |
| 5/04 6/00 6/02 | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation F25B 7/00) arranged in parallel arranged in series Compression machines, plants or systems, with several condenser circuits arranged in parallel |
| 5/04 6/00 6/02 6/04 | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation F25B 7/00) arranged in parallel arranged in series Compression machines, plants or systems, with several condenser circuits arranged in parallel arranged in series Compression machines, plants or systems, with cascade operation, i.e. with two or more circuits, the heat from the condenser of one circuit being absorbed by the evaporator of the next circuit |
| 5/04 6/00 6/02 6/04 7/00 | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation F25B 7/00) arranged in parallel arranged in series Compression machines, plants or systems, with several condenser circuits arranged in parallel arranged in series Compression machines, plants or systems, with cascade operation, i.e. with two or more circuits, the heat from the condenser of one circuit being absorbed by the evaporator of the next circuit (F25B 9/00 takes precedence) Compression machines, plants or systems, in which the refrigerant is air or other gas of low boiling point |
| 5/04 6/00 6/02 6/04 7/00 9/00 | several evaporator circuits, e.g. for varying refrigerating capacity (with cascade operation F25B 7/00) arranged in parallel arranged in series Compression machines, plants or systems, with several condenser circuits arranged in parallel arranged in series Compression machines, plants or systems, with cascade operation, i.e. with two or more circuits, the heat from the condenser of one circuit being absorbed by the evaporator of the next circuit (F25B 9/00 takes precedence) Compression machines, plants or systems, in which the refrigerant is air or other gas of low boiling |

| 9/006 | • • {the refrigerant containing more than one |
|--|---|
| | component (F25B 9/004 takes precedence)} |
| 9/008 | • • {the refrigerant being carbon dioxide} |
| 9/02 | • using Joule-Thompson effect; using vortex effect |
| 9/04 | • • using vortex effect |
| 9/06 | • using expanders (F25B 9/10 takes precedence) |
| 9/065 | • • {using pressurised gas jets} |
| 9/08 | • using ejectors (F25B 9/10 takes precedence) |
| 9/10 | • with several cooling stages |
| 9/12 | • using ³ He- ⁴ He dilution |
| 9/14 | • characterised by the cycle used, e.g. Stirling cycle |
| 9/145 | • • {pulse-tube cycle} |
| 11/00 | Compression machines, plants or systems, using |
| | turbines, e.g. gas turbines |
| 11/02 | • as expanders (F25B 9/06 takes precedence) |
| 11/04 | • • centrifugal type |
| 13/00 | Compression machines, plants or systems, with |
| 13/00 | reversible cycle (defrosting cycles F25B 47/02) |
| | |
| Sorption machines, plants or systems | |
| Sorption ma | <u>chines, plants or systems</u> |
| - | |
| <u>Sorption ma</u> 15/00 | Sorption machines, plants or systems, operating |
| - | |
| 15/00 | Sorption machines, plants or systems, operating continuously, e.g. absorption type |
| 15/00 15/002 | Sorption machines, plants or systems, operating continuously, e.g. absorption type . {using the endothermic solution of salt} |
| 15/00 15/002 15/004 | Sorption machines, plants or systems, operating continuously, e.g. absorption type . {using the endothermic solution of salt} . {of rotary type} |
| 15/00 15/002 15/004 15/006 | <pre>Sorption machines, plants or systems, operating continuously, e.g. absorption type . {using the endothermic solution of salt} . {of rotary type} . {with cascade operation} . {with multi-stage operation (F25B 15/006 takes precedence)}</pre> |
| 15/00 15/002 15/004 15/006 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, |
| 15/00 15/002 15/004 15/006 15/008 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, |
| 15/00 15/002 15/004 15/006 15/008 15/02 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} |
| 15/00 15/002 15/004 15/006 15/008 15/02 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated from aqueous solution {(F25B 15/025 takes |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 15/04 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated from aqueous solution {(F25B 15/025 takes precedence)} |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated from aqueous solution {(F25B 15/025 takes precedence)} the refrigerant being water vapour evaporated |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 15/04 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated from aqueous solution {(F25B 15/025 takes precedence)} the refrigerant being water vapour evaporated from a salt solution, e.g. lithium bromide |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 15/04 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated from aqueous solution {(F25B 15/025 takes precedence)} the refrigerant being water vapour evaporated |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 15/04 15/06 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated from aqueous solution {(F25B 15/025 takes precedence)} the refrigerant being water vapour evaporated from a salt solution, e.g. lithium bromide {(F25B 15/025 takes precedence)} the refrigerant being sulfuric acid {(F25B 15/025 takes precedence)} |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 15/04 15/06 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated from aqueous solution {(F25B 15/025 takes precedence)} the refrigerant being water vapour evaporated from a salt solution, e.g. lithium bromide {(F25B 15/025 takes precedence)} the refrigerant being sulfuric acid {(F25B 15/025 takes precedence)} the refrigerant being sulfuric acid {(F25B 15/025 takes precedence)} |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 15/04 15/06 15/08 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated from aqueous solution {(F25B 15/025 takes precedence)} the refrigerant being water vapour evaporated from a salt solution, e.g. lithium bromide {(F25B 15/025 takes precedence)} the refrigerant being sulfuric acid {(F25B 15/025 takes precedence)} |
| 15/00 15/002 15/004 15/006 15/008 15/02 15/025 15/04 15/06 15/08 | Sorption machines, plants or systems, operating continuously, e.g. absorption type {using the endothermic solution of salt} {of rotary type} {with cascade operation} {with multi-stage operation (F25B 15/006 takes precedence)} without inert gas ({F25B 15/004, F25B 15/006, F25B 15/008}, F25B 15/12, F25B 15/14, F25B 15/16 take precedence) {Liquid transfer means} the refrigerant being ammonia evaporated from aqueous solution {(F25B 15/025 takes precedence)} the refrigerant being water vapour evaporated from a salt solution, e.g. lithium bromide {(F25B 15/025 takes precedence)} the refrigerant being sulfuric acid {(F25B 15/025 takes precedence)} the refrigerant being sulfuric acid {(F25B 15/025 takes precedence)} |

| 15/10 | • with inert gas ({F25B 15/004, F25B 15/006, |
|--------|---|
| | F25B 15/008}, F25B 15/12, F25B 15/14, |
| | $\overline{F25B \ 15/16} \text{ take precedence})$ |
| 15/12 | with resorber ({F25B 15/004, F25B 15/006, |
| | <u>F25B 15/008</u> }, <u>F25B 15/14</u> take precedence) |
| 15/14 | • using osmosis { (F25B 15/004, F25B 15/006, |
| 10/11 | $\frac{F25B 15/008}{F25B 15/008}$ take precedence) |
| 15/16 | • using desorption cycle {(F25B 15/004, |
| 10/10 | F25B 15/006, F25B 15/008 take precedence) |
| | <u>1 202 10/000</u> , <u>1 202 10/000</u> (and proceedence)) |
| 17/00 | Sorption machines, plants or systems, operating |
| | intermittently, e.g. absorption or adsorption type |
| 17/02 | • the absorbent or adsorbent being a liquid, e.g. brine |
| | (F25B 17/10 takes precedence) |
| 17/04 | • • with two or more boilers operating alternately |
| 17/06 | • • with the boiler and evaporator built-up as a unit in |
| | a tiltable or revolving arrangement |
| 17/08 | • the absorbent or adsorbent being a solid, e.g. salt |
| | (F25B 17/12 takes precedence) |
| 17/083 | • { with two or more boiler-sorbers operating |
| | alternately} |
| 17/086 | • {with two or more boiler-sorber/evaporator units} |
| 17/10 | using the endothermic solution of salt |
| 17/12 | using desorption of hydrogen from a hydride |
| 1//12 | • using desorption of nydrogen from a nydride |

Machines, plants or systems, with a single mode of operation, not covered by groups F25B 1/00 - F25B 17/00

| 19/00 | Machines, plants or systems, using evaporation of a refrigerant but without recovery of the vapour |
|--------|--|
| 19/005 | • {the refrigerant being a liquefied gas} |
| 19/02 | • using fluid jet, e.g. of steam {(<u>F25B 19/005</u> takes precedence)} |
| 19/04 | • using liquid jet, e.g. of water |
| 21/00 | Machines, plants or systems, using electric or magnetic effects |
| 21/02 | using Peltier effect; using Nernst-Ettinghausen effect |
| 21/04 | reversible |
| 23/00 | Machines, plants or systems, with a single mode of operation not covered by groups <u>F25B 1/00</u> - <u>F25B 21/00</u> , e.g. using selective radiation effect |
| 23/003 | • {using selective radiation effect} |
| 23/006 | • {boiling cooling systems} |
| 25/00 | Machines, plants or systems, using a combination |

| 20/00 | indefinites, plants of systems, asing a combination |
|-------------------------------------|--|
| | of modes of operation covered by two or more of the groups F25B 1/00 - F25B 23/00 |
| 25/005 25/02 | {using primary and secondary systems} Compression-sorption machines, plants, or systems |
| 27/00 | Machines, plants or systems, using particular sources of energy (F25B 30/06 takes precedence) |
| 27/002 27/005 27/007 27/02 | {using solar energy} {in compression type systems} {in sorption type systems} using waste heat, e.g. from internal-combustion engines |
| 29/00 29/003 | Combined heating and refrigeration systems, e.g. operating alternately or simultaneously . {of the compression type system} |

| 29/006 | • {of the sorption type system} |
|--------------|--|
| 30/00 | Heat pumps (F25B 1/00-F25B 25/00, F25B 29/00 take precedence) |
| 30/02 | • of the compression type |
| 30/02 | • of the compression type • of the sorption type |
| 30/04 | of the solution type characterised by the source of low potential heat |
| | |
| Component pa | arts or details |
| 31/00 | Compressor arrangements |
| 31/002 | • {Lubrication} |
| 31/004 | • • {oil recirculating arrangements} |
| 31/006 | • {Cooling of compressor or motor} |
| 31/008 | • • {by injecting a liquid} |
| 31/02 | • of motor-compressor units |
| 31/023 | • • {with compressor of reciprocating-piston type} |
| 31/026 | • • {with compressor of rotary type} |
| 33/00 | Boilers; Analysers; Rectifiers (boiler-absorbers <u>F25B 35/00</u>) |
| 35/00 | Boiler-absorbers, i.e. boilers usable for absorption or adsorption |
| 35/02 | • using a liquid as sorbent, e.g. brine |
| 35/04 | • using a solid as sorbent |
| 37/00 | Absorbers; Adsorbers (boiler-absorbers |
| | <u>F25B 35/00</u>) |
| 39/00 | Evaporators; Condensers |
| 39/02 | • Evaporators |
| 39/022 | • • {with plate-like or laminated elements} |
| 39/024 | • • • {with elements constructed in the shape of a hollow panel} |
| 39/026 | • {specially adapted for sorption type systems} |
| 39/028 | • • {having distributing means} |
| 39/04 | • Condensers |
| 40/00 | Subcoolers, desuperheaters or superheaters |
| 40/02 | • Subcoolers |
| 40/04 | • Desuperheaters |
| 40/06 | • Superheaters |
| 41/00 | Fluid-circulation arrangements |
| 41/006 | • {optical fluid control arrangements} |
| 41/10 | . using electro-osmosis |
| 41/20 | • Disposition of valves, e.g. of on-off valves or flow |
| | control valves (expansion valves F25B 41/31) |
| 41/22 | between evaporator and compressor |
| 41/24 | • Arrangement of shut-off valves for disconnecting a part of the refrigerant cycle, e.g. an outdoor part |
| 41/26 | of fluid flow reversing valves |
| 41/28 | specially adapted for sorption cycles |
| 41/30 | Expansion means; Dispositions thereof |
| 41/31 | Expansion means, Dispositions mercor Expansion valves |
| 41/315 | actuated by floats |
| 41/313 | having flow rate limiting means other than the |
| 41/32 | valve member, e.g. having bypass orifices in the valve body |
| 41/325 | having two or more valve members |
| 41/33 | • • • with the valve member being actuated by the fluid pressure, e.g. by the pressure of the |
| 41/335 | refrigerant •••• via diaphragms |
| | |

_

| 41/34 | • • • with the valve member being actuated by |
|--|--|
| | electric means, e.g. by piezoelectric actuators |
| 41/345 | • • • by solenoids |
| 41/347 | ••••• { with the valve member being opened and |
| | closed cyclically, e.g. with pulse width |
| | modulation } |
| 41/35 | • • • by rotary motors, e.g. by stepping motors |
| 41/355 | •••••••••••••••••••••••••••••••••••••• |
| 11/555 | shape memory elements or heat expanding |
| | elements |
| 41/36 | • • • with the valve member being actuated by |
| 41/50 | bimetal elements or shape-memory elements |
| | influenced by fluids, e.g. by the refrigerant |
| 41/37 | Capillary tubes |
| 41/375 | characterised by a variable restriction, e.g. |
| 41/5/5 | restrictors made of shape memory alloy |
| 41/38 | • specially adapted for reversible cycles, e.g. |
| 41/50 | bidirectional expansion restrictors |
| 41/385 | Dispositions with two or more expansion means |
| 41/505 | arranged in parallel on a refrigerant line leading |
| | to the same evaporator |
| 41/39 | Dispositions with two or more expansion means |
| 11/57 | arranged in series, i.e. multi-stage expansion, on a |
| | refrigerant line leading to the same evaporator |
| 41/40 | • Fluid line arrangements |
| 41/42 | • Arrangements for diverging or converging flows, |
| | e.g. branch lines or junctions |
| 41/45 | for flow control on the upstream side of the |
| | diverging point, e.g. with spiral structure for |
| | generating turbulence |
| 41/48 | for flow path resistance control on the |
| | downstream side of the diverging point, e.g. by |
| | downstream side of the driverging point, e.g. by |
| | an orifice |
| 42/00 | an orifice |
| 43/00 | an orifice Arrangements for separating or purifying gases |
| 43/00 | an orifice Arrangements for separating or purifying gases or liquids (in analysers or rectifiers F25B 33/00); |
| 43/00 | an orifice Arrangements for separating or purifying gases or liquids (in analysers or rectifiers <u>F25B 33/00</u>); Arrangements for vaporising the residuum of |
| 43/00 | an orifice Arrangements for separating or purifying gases or liquids (in analysers or rectifiers F25B 33/00); Arrangements for vaporising the residuum of liquid refrigerant, e.g. by heat (F25B 40/00 takes |
| | an orifice Arrangements for separating or purifying gases or liquids (in analysers or rectifiers F25B 33/00); Arrangements for vaporising the residuum of liquid refrigerant, e.g. by heat (F25B 40/00 takes precedence) |
| 43/003 | an orifice Arrangements for separating or purifying gases or liquids (in analysers or rectifiers F25B 33/00); Arrangements for vaporising the residuum of liquid refrigerant, e.g. by heat (F25B 40/00) takes precedence) . {Filters} |
