G05 CONTROLLING; REGULATING

(NOTES omitted)

G05B CONTROL OR REGULATING SYSTEMS IN GENERAL; FUNCTIONAL ELEMENTS OF SUCH SYSTEMS; MONITORING OR TESTING ARRANGEMENTS FOR SUCH

SYSTEMS OR ELEMENTS (systems for controlling or regulating non-electric variables <u>G05D</u>; systems for regulating electric or magnetic variables <u>G05F</u>; control devices or systems insofar as characterised by mechanical features only G05G)

NOTES

- 1. This subclass <u>covers</u> features of control systems or elements for regulating specific variables, which are clearly more generally applicable.
- 2. This subclass does not cover:
 - a. systems for controlling or regulating nonelectric variables in general, which are covered by subclass G05D;
 - b. systems for regulating electric or magnetic variables in general, which are covered by subclass G05F;
 - c. systems specially adapted for the control of particular machines or apparatus provided for in a single other subclass, which are classified in the relevant subclass for such machines or apparatus, provided that there is specific provision for control or regulation relevant to the special adaptation. Otherwise, classification is made in the most appropriate place in this subclass.
- 3. In this subclass, the following terms or expressions are used with the meanings indicated:
 - "automatic controller" means a system, circuit, or device in which a signal from the detecting element is compared with a signal representing the desired value and which operates in such a way as to reduce the deviation. The automatic controller generally does not include the sensitive element, i.e. that element which measures the value of the condition to be corrected, or the correcting element, i.e. that element which adjusts the condition to be corrected;
 - "electric" includes "electromechanical", "electrohydraulic" or "electropneumatic".
- 4. In this subclass, details of specific control systems are classified in the group relevant to the system, if not otherwise provided for.

1/00	Comparing elements, i.e. elements for effecting	6/05	• fluidic
	comparison directly or indirectly between a desired value and existing or anticipated values	7/00	Arrangements for obtaining smooth engagement
1/01 1/02	 electric for comparing analogue signals (circuits for comparing the phase or frequency of two 	7/02 7/04	or disengagement of automatic control . electric . fluidic
1/022 1/025	mutually-independent oscillations <u>H03D 13/00</u>) {using discharge tubes} {using inductance means}	9/00	Safety arrangements (G05B 7/00 takes precedence; safety arrangements in programme-control systems G05B 19/048, G05B 19/406)
1/027	• • • {using impedance bridges}	9/02	. electric
1/03 1/04	for comparing digital signalswith sensing of the position of the pointer of a	9/03	• • with multiple-channel loop, i.e. redundant control systems
1.00	measuring instrument	9/05	• fluidic
1/06 1/08 1/11	 continuous sensing stepwise sensing. fluidic	11/00 11/01	Automatic controllers (G05B 13/00 takes precedence)
5/00	Anti-hunting arrangements	11/01	electric• {details of the correcting means}
5/01	. electric	11/012	. {details of the correcting means} . {details of the transmission means}
5/04	• fluidic	11/013	• • • {using discharge tubes}
6/00	Internal feedback arrangements for obtaining particular characteristics, e.g. proportional, integral or differential	11/015 11/016 11/017	 {using rotating amplifiers} {using inductance means} {using photo-electric means}
6/02	. electric	11/018	• • • {using thermal amplifiers}

11/06	 in which the output signal represents a continuous function of the deviation from the desired value, 	13/0255	• • • {the criterion being a time-optimal performance criterion}
	i.e. continuous controllers (G05B 11/26 takes	13/026	•
	precedence)		• • {using a predictor}
11/10	• • • the signal transmitted being dc	13/0265	• • {the criterion being a learning criterion}
		13/027	{using neural networks only}
11/12	the signal transmitted being modulated on an ac carrier	13/0275	• • · {using fuzzy logic only}
11/14		13/028	• • { using expert systems only }
11/14	in which the output signal represents a	13/0285	• • • {using neural networks and fuzzy logic}
	discontinuous function of the deviation from	13/029	• • {using neural networks and expert systems}
	the desired value, i.e. discontinuous controllers	13/0295	• • {using fuzzy logic and expert systems}
	(G05B 11/26 takes precedence)	13/04	involving the use of models or simulators
11/16	Two-step controllers, e.g. with on/off action	13/041	{in which a variable is automatically adjusted
11/18	Multi-step controllers	,	to optimise the performance}
11/26	• • in which the output signal is a pulse-train	13/042	• • • {in which a parameter or coefficient is
11/28	• • • using pulse-height modulation; using pulse-width modulation	10,012	automatically adjusted to optimise the performance}
11/30	using pulse-frequency modulation	13/044	• • • {not using a perturbation signal}
11/32	• • with inputs from more than one sensing element;	13/044	{using a perturbation signal}
	with outputs to more than one correcting element		, , , , , , , , , , , , , , , , , , ,
11/36	• with provision for obtaining particular characteristics, e.g. proportional, integral,	13/047	• • • {the criterion being a time optimal performance criterion}
	differential	13/048	• • • {using a predictor}
11/38	• • • for obtaining a proportional characteristic	15/00	Systems controlled by a computer (G05B 13/00,
11/40	• • • for obtaining an integral characteristic		G05B 19/00 take precedence; automatic controllers
11/42	for obtaining a characteristic which is both		with particular characteristics G05B 11/00)
	proportional and time-dependent, e.g. P. I., P. I. D.	15/02	. electric
11/44		17/00	Systems involving the use of models or simulators
	• pneumatic only		of said systems (<u>G05B 13/00</u> , <u>G05B 15/00</u> ,
11/46	• • without auxiliary power		G05B 19/00 take precedence)
11/48	with auxiliary power	17/02	• electric
11/50	in which the output signal represents a		
	continuous function of the deviation from the	19/00	Programme-control systems
	desired value, i.e. continuous controllers	19/00 19/02	Programme-control systems . electric
11/52	desired value, i.e. continuous controllers in which the output signal represents a		electricProgramme control other than numerical control,
11/52	 desired value, i.e. continuous controllers in which the output signal represents a discontinuous function of the deviation from 	19/02	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers
	desired value, i.e. continuous controllers • • • in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers	19/02	electricProgramme control other than numerical control,
11/52 11/54	 desired value, i.e. continuous controllers in which the output signal represents a discontinuous function of the deviation from 	19/02	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers
	desired value, i.e. continuous controllers • • • in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers	19/02 19/04	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence)
11/54	desired value, i.e. continuous controllers in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers Two-step controllers, e.g. with on/off action	19/02 19/04	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence) {Programme-control specially adapted for
11/54 11/56	desired value, i.e. continuous controllers • • in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers • • • Two-step controllers, e.g. with on/off action • • Multi-step controllers	19/02 19/04	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence) {Programme-control specially adapted for machine tool control and not otherwise
11/54 11/56	desired value, i.e. continuous controllers in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers Two-step controllers, e.g. with on/off action Multi-step controllers . with inputs from more than one sensing element;	19/02 19/04 19/0405	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence) {Programme-control specially adapted for machine tool control and not otherwise provided for}
11/54 11/56 11/58 11/60	desired value, i.e. continuous controllers • • in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers • • • Two-step controllers, e.g. with on/off action • • Multi-step controllers • with inputs from more than one sensing element; with outputs to more than one correcting element • hydraulic only	19/02 19/04 19/0405 19/041 19/0415	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence) {Programme-control specially adapted for machine tool control and not otherwise provided for} {Function-oriented details} {adapting phase duration according to measured parameters}
11/54 11/56 11/58	desired value, i.e. continuous controllers in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers Two-step controllers, e.g. with on/off action Multi-step controllers . with inputs from more than one sensing element; with outputs to more than one correcting element . hydraulic only Adaptive control systems, i.e. systems	19/02 19/04 19/0405	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence) {Programme-control specially adapted for machine tool control and not otherwise provided for} {Function-oriented details} {adapting phase duration according to measured parameters} using digital processors (G05B 19/05 takes)
11/54 11/56 11/58 11/60	desired value, i.e. continuous controllers in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers Two-step controllers, e.g. with on/off action Multi-step controllers with inputs from more than one sensing element; with outputs to more than one correcting element . hydraulic only Adaptive control systems, i.e. systems automatically adjusting themselves to have a	19/02 19/04 19/0405 19/041 19/0415	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence) {Programme-control specially adapted for machine tool control and not otherwise provided for} {Function-oriented details} {adapting phase duration according to measured parameters} using digital processors (G05B 19/05 takes precedence)
11/54 11/56 11/58 11/60	desired value, i.e. continuous controllers in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers Two-step controllers, e.g. with on/off action Multi-step controllers with inputs from more than one sensing element; with outputs to more than one correcting element . hydraulic only Adaptive control systems, i.e. systems automatically adjusting themselves to have a performance which is optimum according to	19/02 19/04 19/0405 19/041 19/0415	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence) {Programme-control specially adapted for machine tool control and not otherwise provided for} {Function-oriented details} {adapting phase duration according to measured parameters} using digital processors (G05B 19/05 takes)
11/54 11/56 11/58 11/60	desired value, i.e. continuous controllers in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers Two-step controllers, e.g. with on/off action Multi-step controllers . with inputs from more than one sensing element; with outputs to more than one correcting element . hydraulic only Adaptive control systems, i.e. systems automatically adjusting themselves to have a performance which is optimum according to some preassigned criterion (G05B 19/00 takes	19/02 19/04 19/0405 19/041 19/0415 19/042	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence) {Programme-control specially adapted for machine tool control and not otherwise provided for} {Function-oriented details} {adapting phase duration according to measured parameters} using digital processors (G05B 19/05 takes precedence)
11/54 11/56 11/58 11/60 13/00	desired value, i.e. continuous controllers in which the output signal represents a discontinuous function of the deviation from the desired value, i.e. discontinuous controllers Two-step controllers, e.g. with on/off action Multi-step controllers with inputs from more than one sensing element; with outputs to more than one correcting element . hydraulic only Adaptive control systems, i.e. systems automatically adjusting themselves to have a performance which is optimum according to some preassigned criterion (G05B 19/00 takes precedence)	19/02 19/04 19/0405 19/041 19/0415 19/042 19/0421	 electric Programme control other than numerical control, i.e. in sequence controllers or logic controllers (G05B 19/418 takes precedence) {Programme-control specially adapted for machine tool control and not otherwise provided for} {Function-oriented details} {adapting phase duration according to measured parameters} using digital processors (G05B 19/05 takes precedence) {Multiprocessor system}

2219/21163 Test I-O if functional or safe value 2219/21164 Resistors between transmitter and receiver, against disturbances 2219/21165 . Zenediodes for protection of output of transmitter, input of receiver 2219/21166 . Output state, over resistance, coupled back to input to monitor output 2219/21167 . Intelligent I-O monitors also local load, controlled object 2219/21168 Couple, feedback each output to corresponding input to verify output 2219/21169 Low voltage protection 2219/2202 Controller calculates a control parameter from values sent by other controllers 2219/2203 Grid, array of controllers 2219/2204 Use default values if communication with other controllers input, link to control ler combined with state sequencer 2219/2208 Each processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time		2219/2233 Each slave can control several other slaves
2219/21165 . Zenerdiodes for protection of output of transmitter, input of receiver 2219/21166 . Output state, over resistance, coupled back to input to monitor output of transmitter, input of receiver 2219/21167 . Intelligent I-O monitors also local load, controlled object 2219/21168 . Couple, feedback each output to corresponding input to verify output 2219/21169 . Low voltage protection 2219/2202 . Controller calculates a control parameter from values sent by other controllers 2219/2203 . Grid, array of controllers 2219/2204 . Use default values if communication with other controllers not available 2219/2205 . Microprocessor for display and parameter input, link to controller combined with state sequencer 2219/2208 . Each processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time		2219/2234 Each slave can function in stand alone if master
2219/21165 . Zenerdiodes for protection of output of transmitter, input of receiver 2219/21166 . Output state, over resistance, coupled back to input to monitor output 2219/21167 . Intelligent I-O monitors also local load, controlled object 2219/21168 . Couple, feedback each output to corresponding input to verify output 2219/21169 . Low voltage protection 2219/220 . Controller calculates a control parameter from values sent by other controllers 2219/2203 . Grid, array of controllers 2219/2204 . Use default values if communication with other controllers not available 2219/2205 . Multicore 2219/2207 . Microprocessor for display and parameter input, link to control microprocessor 2219/2208 . Each processor controls a different function of the machine 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time	2219/21164 Resistors between transmitter and receiver,	
2219/21166 . Output state, over resistance, coupled back to input to monitor output 2219/21167 . Intelligent I-O monitors also local load, controlled object 2219/21168 . Couple, feedback each output to corresponding input to verify output 2219/21169 . Low voltage protection 2219/2220 . Controller calculates a controllers 2219/2202 . Controller calculates a controllers 2219/2204 . Use default values if communication with other controllers not available 2219/2205 . Multicore 2219/2206 . Microprocessor for display and parameter input, link to controll microprocessor to the machine 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2200 . Dupt to to monitor output 2219/2236 . Selection of master or slave 2219/2237 . Selection of master or slave 2219/2239 . Several master at same time 2219/2239 . Reallocate, reschedule execution of controlled functions if one processor fails 2219/2241 . Real time database, each processor stores in local memory used variables 2219/2242 . Program references to variable by absolute address 2219/2242 . Detect incompatibilities between control devices 2219/2300 . Expansion of control words, code of standard language to increase functionality 2219/2300 . Bumpless control transfer, map corresponding operation states to operation tables 2219/2300 . Build up program so that safety conditions are met, select most stable states 2219/2300 . Expert design system, uses modeling, simulation, to control design process		
2219/21166 Output state, over resistance, coupled back to input to monitor output 2219/21167 Intelligent I-O monitors also local load, controlled object 2219/21168 Couple, feedback each output to corresponding input to verify output 2219/21169 Low voltage protection 2219/222 . Pc multi processor system 2219/2202 Controller calculates a control parameter from values sent by other controllers 2219/2203 Grid, array of controllers 2219/2204 Use default values if communication with other controllers not available 2219/2205 . Multicore 2219/2206 . Microprocessor for display and parameter input, link to control microprocessor 2219/2207 . Microcontroller combined with state sequencer 2219/2208 . Each processor is permitted to execute a common function at a time 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Espectation of master or slave 2219/2238 . Several masters at same time 2219/2239 . Reallocate, reschedule execution of controlled functions if one processor fails 2219/2241 . Real time database, each processor stores in local memory used variables 2219/2242 . Program references to variable by absolute address, update of absolute address 2219/2243 . Detect incompatibilites between control devices 2219/23001 . Expansion of control words, code of standard language to increase functionality 2219/23002 . Petrinet 2219/23003 . Build up program so that safety conditions are met, select most stable states 2219/23005 . Expert design system, uses modeling, simulation, to control design process		
input to monitor output 2219/21167 . Intelligent I-O monitors also local load, controlled object 2219/21168 . Couple, feedback each output to corresponding input to verify output 2219/21169 . Low voltage protection 2219/220 . Pc multi processor system 2219/220 . Controller calculates a control parameter from values sent by other controllers 2219/2203 . Grid, array of controllers 2219/2204 . Use default values if communication with other controllers on tavailable 2219/2205 . Microprocessor for display and parameter input, link to control microprocessor 2219/2207 . Microcontroller combined with state sequencer 2219/2208 . Each processor controls a different function of the machine 2219/2209 . Only one processor is permitted to execute a common function at a time 2219/2209 . Expert design system, uses modeling, simulation, to control design process		
2219/21167 Intelligent I-O monitors also local load, controlled object 2219/21168 Couple, feedback each output to corresponding input to verify output 2219/21169 Low voltage protection 2219/220 Controller calculates a control parameter from values sent by other controllers 2219/2201 Use default values if communication with other controllers not available 2219/2202 Multicore 2219/2203 Multicore 2219/2204 Microprocessor for display and parameter input, link to control microprocessor 2219/2207 Microcontroller combined with state sequencer 2219/2208 Each processor controls a different function of the machine 2219/2209 Only one processor is permitted to execute a common function at a time 2219/2209 Expert design system, uses modeling, simulation, to control design process		2219/2237 Selection of master or slave
controlled object 2219/21168 Couple, feedback each output to corresponding input to verify output 2219/21169 Low voltage protection 2219/220 Controller calculates a control parameter from values sent by other controllers 2219/2203	· · · · · · · · · · · · · · · · · · ·	2219/2238 Several masters at same time

		2219/23006 Finite state modeling

2219/23007 CAD to develop sequential control system, use	2219/23046 Selection out of menu by function keys
data also to test	2219/23047 Operating, repair manual stored in memory
2219/23008 Computer aided software engineering, program generation, case tools, CASE	2219/23048 Knob to select program serves also as indicator for progress of program
2219/23009 Automatic documentation of program	2219/23049 Control panel serial, RS232 connected to
2219/23011 Sequence control design using pc, cad of control system CADCS	controller 2219/23051 Remote control, enter program remote,
2219/23012 Derive sequence program from design, cad data	detachable programmer
of machine CADCS 2219/23013 Build up program by selecting function	2219/23052 Matrix, plugboard like control panel with modules for display, switches
modules as function of amount paid for it,	2219/23053 Knob with tactile feedback, representing clicks,
charging, payment 2219/23014 Conversion of ASCII scripting language to	detents programmed 2219/23054 Simulate response on entered parameters and
machine code	display, quicker response
2219/23015 Convert input signals to universal machine control signals represented by music	2219/23055 Cursor keys to select cells of a spreadsheat with control parameter, enter value
2219/23016 Accelerate input, exponent as function of	2219/23056 Foot pedal, control, operated
pressure, time, turning speed, keys for 10-to-1 2219/23017 Page, scroll key	2219/23057 • • • Position of knob, pedal detected by encoder, addresses memory for functions
2219/23018 Enter parameters by combinations of keys and	2219/23058 Knob, pedal selects ranges, functions and
duration of actuation of keys 2219/23019 Joystick delivers reference function as function	controls in each range as function of position 2219/23059 Configuration of pedal, knob with code card,
of speed of its movement, except about null	adapt pedal to person
2219/23021 Gesture programming, camera sees hand, displays it on screen, grasp buttons	2219/23061 Variable range of knob, pedal for each function, adapt to person
2219/23022 Production design metaphore, tool, operation	2219/23062 Position of knob, pedal detected by bundle of
like input system 2219/23023 Control knobs, levers integrated into display,	optical fibres 2219/23063 Double, two foot pedal
display parameters near knobs	2219/23064 Entry of function or parameter during
2219/23024 Delivers reference when in neutral position, otherwise delivers desired value	manipulation of tool, operation
2219/23025 Overlay, template for keys with different	2219/23066 Manual override of program 2219/23066 Same knob starts two different functions
meaning	2219/23067 Control, human or man machine interface,
2219/23026 Recognise user input pattern and present possible intended program	interactive, HMI, MMI 2219/23068 Give instructions, messages to operator
2219/23027 Database with information on how to control or	2219/23069 Illuminated, lighting up keys, build in led,
test different appliances 2219/23028 Switch function of panel, detect this and	display, show sequence data entry
execute other orders	2219/23071 • • • If up, down key is selected, linear display of values appears, pops up
2219/23029 Up down, increment decrement keys, jog, sequentially show functions or values	2219/23072 Telephone, dial as control panel
2219/23031 Simulate control panel to give remote	2219/23073 Keyboard decoding by microprocessor 2219/23074 Each control unit can control own associated
instructions 2210/22022 Input of data from accord control unit if first	load or as central control
2219/23032 Input of data from second control unit if first fails	2219/23075 Control unit can switch load on off or can also go into program mode
2219/23033 Variable pressure on key gives input value	2219/23076 Pushbuttons to manually up or down control of
2219/23034 Press once on key to raise signal, twice to lower signal	motor also for entry of program 2219/23077 Reconfigurable remote programmer, learn
2219/23035 Same knob, different functions, turn for pulses,	control signals for different devices
push to enter value 2219/23036 Same knob, different function, normal for	2219/23078 Input a code representing a sequence of operations
parameter, value, pushed to enter value	2219/23079 Local programmer can switch to remote to use
2219/23037 Touch key integrated in display2219/23038 Select function by amplitude of analog value,	same capabilities as remote 2219/23081 MMI design, operator workplace design
potentiometer, resistor taps	2219/23082 Enter parameters with two hands, dead man
2219/23039 Remote programmer 2219/23041 Enter analog value	knob, switch, pedal
2219/23042 Only increment key	2219/23083 Joystick with buttons for menu and function selection, scrolling, +sign and -sign
2219/23043 Remote and local control panel, programming	2219/23084 Synoptic display of available, selectable control
unit, switch 2219/23044 Transparent overlay with touch sensors, put	modules with their functions 2219/23085 Several users can enter data simultaneously to
over display panel, select function	same processor
2219/23045 Function key changes function as function of program, associated pictogram	2219/23086 Menu is sequentially selected and read from cd disk and guides operator

2219/23087 Program	nmable selector switch, can be	2219/23128	Switch from one kind of display to other when
	nmed by connected apparatus		parameter is changed
	vitch to power control and to set es of several devices	2219/23129	Animated display, changes as function of
	label rewritten, changed to indicate	2219/23131	parameters Select on large display part of pictogram to
	or alternate functions	221)/23131	show on display of used workstation
	e consoles, panels to issue concurrent	2219/23132	Multifunction display
	nds to different groups I-O	2219/23133	Animated, rotating fan indicates speed, flashing
	down keys, simulated on screen		bulb for intensity
_	code representing a device function	2219/23134	Display history of used, selected programs, their frequency
2219/23094 Debound	pushed during power up, knob can be	2219/23135	Display to console, panel which sends
	erwards as data input	2213/120100 ()	parameters, commands
	gle button, knob to enter code number,	2219/23136	Display all subsystems, select one and display
	number of pushes		screen corresponding to subsystem
	es to operator in mother tongue,		Display program step, instruction number
	n out of different languages control, via microprocessor instead of	2219/23138	Linear, bar display of variables
	onnection to actuators		Flat panel, thin film electro luminescent
	s on panel, connected to serial port	2219/23142	-
	uality parameters to select control	2219/23143	
paramet		2219/23144	Kind of display, matrix like display, large
	parameter is low energy consumption		surface
of mach	nne parameter is high production rate		Blinking, flickering display
	display of window to another as	2219/23146	Programmable, reconfigurable via microprocessor or coding switches
	of settable active display time of	2219/23147	LCD liquid crystal display
window			Helmet display, mounted on head of operator
2219/23105 Window		2219/23149	Dual, two displays
	metaphore, condensed representation, hings better shown	2219/23151	
2219/23107 Push on	-	2219/23152	Large and several smaller displays for each
	onding window pops up on whole	2210/22152	workstation, each own cursor on large display Controlled load, lightbulb, roller blind itself
screen		2219/23133 • • •	acts as display to acknowledge command
	an, room metaphore, dedicated	2219/23154	Line of light diodes LED
	s, unchangeable but can be selectable ration of display device, operator panel	2219/23155	Display on screen reference value and sequence
2219/23111 Adapt co			steps
	lope connection between two reference		Show upper, lower value, position with upper, lower segment of 7-segment display
values	•		Display process, synoptic, legend, pictogram,
	retransmit several times data for valid		mimic
	lundant command		Display of evaluated and selectable program
	n parameter setting for a while to avoid due to noise		Display plurality of parameters simultaneously
2219/23115 Buffer	due to hoise	2219/23161	Hand held terminal PDA displays machine
	gnal can be sent simultaneously to	2219/23162	control program when user is near that machine Display real time or time already elapsed or
	processors	2217/23102 • • •	rest time for program
	table, interpolation between points	2219/23163	Display enlarged, zoomed detail and small
	and line select in memory to access data in second memory, tree		overall schematic, plan
	state, variable only when needed,		Display data on a scrolling line, ticker display
energy s		2219/23165	Display of parameter plus permissable, allowable range
	graphics with corresponding text	2219/23166	Display program in fast, quick, speed mode
	on off time chart for different events		Display of selected sequence, permissable
2219/23123 Producti			sequence
	l, message from other operator display to show different things, test or		Display progress of program
normal s		2219/23169	Operation field together with control parameters
	tree structure of whole system or	2219/23171	Display dynamic change of process, animation
	info after function selection		Different states with one LED, blinking, on and
	from one kind of display to other,		off or different colours
selected	by duration discrimination	2219/23173	Display modified program together with
			original program to see differences

2219/23174 Display of parameter and several suggested	2219/23219 Different tasks in different memory, called as
values for that parameter	function of priority of tasks
2219/23175 What to display: program channels, running of program	2219/23221 Each event can have two sub events, device can be activated twice in cycle
2219/23176 Display entered data for each controlled station	2219/23222 On off time tables, as function of angle, each
2219/23177 Indicate all selected devices operating currently	linked to groups for device selection, pointer
2219/23178 Display status of currently selected controlled devices	2219/23223 During each cycle, different on off sequences can be used
2219/23179 Warning display if heavy energy consuming	2219/23224 Offset on off signals for different sections
programsteps are selected	2219/23225 Program system from more than one source
2219/23181 Use of sound, acoustic, voice	2219/23226 Table with data on how to execute the same
2219/23182 3D display of controlled system	function in different modules
2219/23183 Display effects of high level commands	2219/23227 Environment conditions affect execution of program
2219/23184 • • • Display different states by using two leds, first blinks, then second, then both	2219/23228 Program execution, if external programs exist,
2219/23185 Setting of internal dipswitches, jumpers	execute them instead of internal
2219/23186 Visual display of workpiece with actions to	2219/23229 Execute first current program, then select new
execute on	program
2219/23187 Display number of each program	2219/23231 Mark objects, execute sequence according to
2219/23188 Software independent and dependent of	mark
hardware	2219/23232 Execute program from added, expansion rom,
2219/23189 Information is code	memory 2219/23233 Input state executes immediately corresponding
2219/23191 Command to control simultaneously several	block program
machines 2219/23192 A limited number of programs to be used by	2219/23234 In real time loop do one of the control modules
plurality of machines, multiplex	and a safety module program
2219/23193 • • • Memory stores lifetime, different settings,	2219/23235 Set address code in register to switch between
configurations of controlled device	program in ram and in eprom, flash
2219/23194 Check validity data by writing in sector control	2219/23236 Table lookup driven system
data and check data	2219/23237 Program execution by message passing
2219/23195 Memory stores available, allowable, possible	2219/23238 TV microprocessor executes also home control,
options, variations, alternatives of program or modules	monitoring of appliances 2219/23239 Execute other program during idle time of main
2219/23196 • • • From lookup table and real time clock, select	program, or between interrupts
actual daylight period	2219/23241 • • • Idle, during idle time of main program, a game
2219/23197 Curve entered with pen on touchscreen	can be played
2219/23198 Disk with segments connected to separate input	2219/23242 Synthesize time logic circuits
of microprocessor, represents different values	2219/23243 Specification language
2219/23199 Reference value, setpoint for regulator	2219/23244 Ascii script: one line is read each time, each
2219/23201 Value is analog signal	letter controls a device
2219/23202 Curve, surface represents analog value, line,	2219/23245 Block, buffer the inputs when executing critical process, read them when finished, for a finite
surface follower 2219/23203 Curve represents analog value, tv scan	state machine
2219/23204 Reference in coded form	2219/23246 Create control program by demonstrating
2219/23205 Reference together with sequence commands	behaviours using widget and inferencing them
2219/23206 Set reference as function of position, for	2219/23247 Widget have states, properties, events
compensations	associated, demonstrate control behaviour
2219/23207 Capacitive detection of line	2219/23248 Integrate function blocks from different
2219/23208 Potentiometer	machines; CORBA, RMI protocols 2219/23249 Using audio and or video playback
2219/23209 Linear potentiometers with multiple sliders	2219/23251 Use two or more different programming
2219/23211 Limit value to tolerances, ranges, plausibility	languages in same program
2219/23212 Store entered data, program status, reread	2219/23252 High level language HLL, basic, control
regularly, against data loss	language
2219/23213 Check validity of entered data 2219/23214 Checksum CRC	2219/23253 Expert system
2219/23215 Check data validity in ram, keep correct	2219/23254 Interactive programming, sentence on screen
validity, compare rom ram	filled in by operator
2219/23216 Extend processing time by extending enable	2219/23255 Object oriented programming, OOP
signal with special output signal	2219/23256 Hybrid programming, part sequence, part continuous
2219/23217 Parallel processing	2219/23257 Grafcet
2219/23218 Interrupt queued requests only at the end of	2219/23258 GUI graphical user interface, icon, function
each segment of each of requests	bloc editor, labview
	2219/23259 Synchronous language

2219/23261 Use control template library	2219/23305 Transfer program into prom with passwords
2219/23262 DDE direct data exchange, DLL dynamic	2219/23306 Load program from host, remote load, non
library linking	volatile card to volatile, ram
2219/23263 · · · C++	2219/23307 Initial program loader, ipl, bootstrap loader
2219/23264 Assembly language, pass parameters by	2219/23308 Transfer program from ram to eprom, flash,
registers instead of stack	card
2219/23265 Select device driver for actuator, sensor	2219/23309 System boot only allowed after inputting user
2219/23266 Compiler	identification, password
2219/23267 Program derived from sequence time diagram	2219/23311 Load new program together with test program
and stored in table	2219/23312 Load program from attached device to control
2219/23268 Forth	that device
2219/23269 Program provides for communication protocol	2219/23313 Load program to initial configure machine,
with device, equipment	then erase and install userprogram
2219/23271 Decompiler, translate machine code to HLL,	2219/23314 Switch between initialisation, program, test, end of programming, erase mode
reverse processing, easy modification	2219/23315 • • Normal and emulated, pass through for
2219/23272 Natural language, use simple words like move, rotate	disabled persons modes
2219/23273 Select, associate the real hardware to be used in	2219/23316 • • • Standby, inactive, sleep or active, operation
the program	mode
2219/23274 Link graphical data for display automatically	2219/23317 Safe mode, secure program, environment in
into program	case of error, intrusion
2219/23275 Use of parser	2219/23318 Mode, two mode, directly from console or
2219/23276 Use of virtual, logical connections	download from host
2219/23277 Use of separate interface software, main	2219/23319 Microprocessor control or manual control
program calls functions from it	2219/23321 Switch between manual, automatic, inching or
2219/23278 Program by data flow	step by step mode, select mode
2219/23279 • • • Enter simple words: start motor, pc translates	2219/23322 Hand, manual or automatic
boolean equations into orders	2219/23323 Select between entry and execution of program
2219/23281 PEARL process experimental automation real	2219/23324 Separate update program onboard
time language	2219/23325 Transfer modified data from ram to eprom,
2219/23282 Detect erroneous instructions in asic systems	flash after system have run several cycles 2219/23326 Clone, duplicate hardware functions of another
2219/23283 Debugging, breakpoint 2219/23284 Eliminate redundant states in finite state	device
machine	2219/23327 Modification of program in real time
2219/23285 • • • Enable, disable hardware logic to implement	2219/23328 Modification program
finite state machines	2219/23329 Modification, correction entered values
2219/23286 Graphical representation of finite machine	2219/23331 Patch program during non execution, tables to
states to help operator	load modified program
2219/23287 Executing sequential program concurrently	2219/23332 Overide stored parameters
with state machine instructions	2219/23333 Modify program and store it
2219/23288 Adaptive states; learning transitions	2219/23334 Use of table with addresses for different
2219/23289 State logic control, finite state, tasks, machine,	modules, write new table if modified
fsm 2219/23291 Process, graphic programming of a process,	2219/23335 History, log of program modifications
text and images	2219/23336 Identification of program, application, device to be controlled
2219/23292 Use of model of process, divided in part models	2219/23337 Modify if history of program coincides with
with IN, OUT and actuator	history of modifying data
2219/23293 Automated assembly of machine control	2219/23338 Transfer modified program from ram to eprom,
software, reusable software components	flash
2219/23294 Whole program to first processor, transfer to	2219/23339 Update diskette, cassette initiates bootstrap
next processor if not for 1st	program to load eeprom, flash
2219/23295 Load program and data for multiple processors	2219/23341 Only new module in high level language,
2219/23296 Load, update new program without test	combine with existing modules
program, save memory space	2219/23342 Pluggable rom, smart card
2219/23297 Remote load of program with cellular, wireless, satellite connection	2219/23343 Earom, alterable eeprom, erasable
2219/23298 Remote load of program, through internet	2219/23344 Changeable memory, program
2219/23299 Remote load of program, through fieldbus	2219/23345 Memory is eeprom
2219/23301 Load program from file system of a controller	2219/23346 Permeability of pin sets frequency of oscillator, record carrier
2219/23302 Load program in data blocks	2219/23347 Eprom
2219/23303 Load program, optical connection between	2219/23348 Programmed parameter values in memory, rom,
programmer and eprom	function selection and entry, no cpu
2219/23304 Download program from host	

0010/00040 PI 11 ' 11 C' '	2010/20401
2219/23349 Pluggable pin module, fits in corresponding	2219/23401 Programmer has connection with pc to enter
female receptacle, coded plug	parameters into system directly by pc
2219/23351 Film	2219/23402 Edit reference value on screen by lightpen
2219/23352 Ram rom memory	2219/23403 Store edited program also in detachable
2219/23353 Endless tape, loop	programmer, can be used elsewhere
2219/23354 Hard disk	2219/23404 If data error detected, switch automatically to
2219/23355 Magnetic card	program mode
2219/23356 Programmable, pluggable module, logic set up on front of module	2219/23405 Change settings of events for a whole group of related events
2219/23357 Grammophone record, disk	2219/23406 Programmer device, portable, handheld
2219/23358 Program card with integrated control panel,	detachable programmer
flexible circuit	2219/23407 Program machine during execution of other
2219/23359 Screw like form of record carrier	program in real time
2219/23361 Ram card with write protection switch	2219/23408 Handheld programmer has cover to protect
2219/23362 Floppy diskette	operator from environment
2219/23363 Barcode	2219/23409 Portable, detachable programmer has emulation
2219/23364 Bubble memory	for fixed control panel
2219/23365 Ferrite memory	2219/23411 Voltage supply or allow, not inhibit signal to
	memory on connection of programmer
2219/23366 Temperature induced on tape, sensors read temperature as program data	2219/23412 Discriminate with id code the module to be programmed
2219/23367 Card with picture of work to be done, together	2219/23413 Remote programmer can only program a device
with selectable codes	if nearby, narrow beam communication
2219/23368 VRAM videoram	2219/23414 Pc as detachable program, debug, monitor
2219/23369 Memory in controlled device is ram, rom	device for control system
2219/23371 Fixed and variable memory for parameters or	2219/23415 Program each station with specific data, all,
user program	global with general, common data
2219/23372 XY matrix, switching controlled by pc	2219/23416 Enter application program into I-O module, like
2219/23373 Interactive guidance by voice message	motion program, servo program
2219/23374 Set potentiometer automatically	
2219/23375 Function switch, knob with piezo, strain gauge	2219/23417 Read program from pluggable memory card
2219/23376 Template for program, set values to template	2219/23418 Read tape, card forward, backward, in two
2219/23377 Touch screen, with representation of buttons,	directions
-	2219/23419 Automatic passage of tape to reader
machine on screen	2219/23421 Record program on tape, disk, memory
machine on screen 2219/23378 Touch sensitive key	2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library

machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools,
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data,
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs 2219/23393 Set finish, end time and total program time to	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program 2219/23435 Select a program per zone to be controlled
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program 2219/23435 Select a program per zone to be controlled 2219/23436 Select by dipswitches on power on
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs 2219/23393 Set finish, end time and total program time to	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program 2219/23435 Select a program per zone to be controlled 2219/23436 Select by dipswitches on power on 2219/23437 Each operator can select his own program, data
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs 2219/23393 Set finish, end time and total program time to calculate, derive begin, start time	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program 2219/23435 Select a program per zone to be controlled 2219/23436 Select by dipswitches on power on 2219/23437 Each operator can select his own program, data entry
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs 2219/23393 Set finish, end time and total program time to calculate, derive begin, start time	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program 2219/23435 Select a program per zone to be controlled 2219/23436 Select by dipswitches on power on 2219/23437 Each operator can select his own program, data entry 2219/23438 Select application program as well as
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs 2219/23393 Set finish, end time and total program time to calculate, derive begin, start time 2219/23395 Set time constant 2219/23395 Set value of limit switches, high low value	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program 2219/23435 Select a program per zone to be controlled 2219/23437 Select by dipswitches on power on 2219/23438 Select application program as well as connected control device
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs 2219/23393 Set finish, end time and total program time to calculate, derive begin, start time 2219/23394 Set time constant 2219/23395 Set value of limit switches, high low value 2219/23397 Set day, week	2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Selection out of several programs, parameters 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program 2219/23435 Select a program per zone to be controlled 2219/23436 Select by dipswitches on power on 2219/23437 Each operator can select his own program, data entry 2219/23439 Select application program as well as connected control device 2219/23439 Select additional programfunctions by pushing
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs 2219/23393 Set finish, end time and total program time to calculate, derive begin, start time 2219/23394 Set value of limit switches, high low value 2219/23395 Set value of limit switches, high low value 2219/23397 Set day, week 2219/23398 Set start time and duration	 2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Select program from look up tables as function of detector states, pointer, index to program 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program 2219/23435 Select a program per zone to be controlled 2219/23437 Select by dipswitches on power on 2219/23438 Select application program as well as connected control device 2219/23439 Select additional programfunctions by pushing two different keys
machine on screen 2219/23378 Touch sensitive key 2219/23379 Knob, delivering pulses, digipot, electronic potentiometer 2219/23381 Balls with different properties circulate and form the sequence 2219/23382 Knobs with build in illumination, legend 2219/23383 Lightpen 2219/23384 Tape, card with magnetic, luminescent, iron particles for sequence 2219/23385 Programming pencil, touch probe 2219/23386 Voice, vocal command or message 2219/23387 Trackball 2219/23388 Mixture of different means, joystick, keys, pedals, fader, potentiometer 2219/23389 Modular program, each process has corresponding program module 2219/23391 Each module can transfer data to I-O or other module and has parameter memory 2219/23392 Change execution time ratio of several programs 2219/23393 Set finish, end time and total program time to calculate, derive begin, start time 2219/23394 Set time constant 2219/23395 Set value of limit switches, high low value 2219/23397 Set day, week	2219/23421 Record program on tape, disk, memory 2219/23422 Learn parameters by producing a small number of objects 2219/23423 Record playback 2219/23424 Select construction element from function library 2219/23425 Selection of program, adaptive to process 2219/23426 Layout of program choice around knob according to used intensity 2219/23427 Selection out of several programs, parameters 2219/23428 Selection out of several programs, parameters 2219/23429 Selection as function of connected machine 2219/23431 Change program on detection of deviations 2219/23432 Select as function of different connected tools, each tool has its parameters 2219/23433 Selection of program as function of connected keyboard, panel 2219/23434 Select automatically prefered program data, ordered to most used program 2219/23435 Select a program per zone to be controlled 2219/23436 Select by dipswitches on power on 2219/23437 Each operator can select his own program, data entry 2219/23439 Select application program as well as connected control device 2219/23439 Select additional programfunctions by pushing

2219/23442 As function of colour or number code on object	2219/24008 Safety integrity level, safety integrated systems
to be treated 2219/23443 Upon detected function changes of remote	SIL SIS 2219/24009 If board, card is retrieved, then disconnect first
device, activate proper local program 2219/23444 Select as function of surface property,	power, then block machine 2219/24011 Transmit warning, error message to all devices
characteristic of object handled by machine	in a list
2219/23445 Real time simulation 2219/23446 HIL hardware in the loop, simulates equipment	2219/24012 Use camera of handheld device, head mounted display
to which a control module is fixed	2219/24013 Unlatch all relays in common with
2219/23447 Uses process simulator to develop, simulate faults, fault tree	micorprocessor 2219/24014 Protection to extract, insert circuit board
2219/23448 Find optimum solution by simulating process	2219/24015 Monitoring
with constraints on inputs	2219/24016 Unlatch for reparation
2219/23449 Use of an additional dedicated processor for emulating sensor output	2219/24017 Powering up, starting machine supervised by microprocessor
2219/23451 Software in the loop, bypass function, execute	2219/24018 Computer assisted repair, diagnostic
new program parts on external device	2219/24019 Computer assisted maintenance
2219/23452 Simulate sequence on display to control	2219/24021 Separate processor for monitoring system
program, test functions	2219/24022 Stop error message after a number of repeated
2219/23453 Pc simulates equipment and is connected to sequencer to test program	error events
2219/23454 Execute program in fast mode, real system has	2219/24023 • • • Stop error message after permission operator, acknowledgement
no time to respond	2219/24024 Safety, surveillance
2219/23455 Determine capability of machine by simulating	2219/24025 Remove board with system on power, hot plug
model of capability of its parts	in, swap, docking, life insertion
2219/23456 Model machine for simulation	2219/24026 Latch, block unlatch, unblock
2219/23457 Programmer magnetically attachable to	2219/24027 Circuit, independent from microprocessor,
machine 2219/23458 Remote controller pluggable, attachable to pc	detects contact switch to allow power to
2219/23459 Keyboard attachable, pluggable into household	actuator 2210/24028 Evaluation from control intringically sofo
apparatus	2219/24028 Explosion free control, intrinsically safe 2219/24029 Alarm if wrong device, apparatus is connected
2219/23461 Module has coded cams darking optical	to control module
detectors	2219/24031 Fpga takes over control if emergency or
2219/23462 No local entry panel, only central remote	programmed stop, to shut down sequence
programmer for all appliances 2219/23463 Before controlling module execute monitoring	2219/24032 Power on reset, powering up
of module and its resources	2219/24033 Failure, fault detection and isolation
2219/23464 Use signatures to know module is not corrupt,	2219/24034 Model checker, to verify and debug control software
cfc, control flow checking	2219/24035 Superpose testsignal on normal I-O lines,
2219/23465 Master processor blocks input of data to slaves	through transfo and rectifier
2219/23466 Block, latch entry keys once program launched	2219/24036 Test signal generated by microprocessor, for all
2219/23467 Code and program on two objects to be assembled, compared for compatibility	I-O tests 2219/24037 Switch on pin of microprocessor for test
2219/23468 Before switch to execution of second, non	2219/24038 Several test signals stored in memory and used
failsafe program, inhibit I-O for it	as input signals
2219/23469 Execute alternatively a failsafe, proven	2219/24039 Test sequence time and sequence profile
program and a non failsafe program 2219/23471 Interrupt after set time non failsafe program,	2219/24041 Pc as detachable debug, monitor device for
switch to failsafe program	control system 2219/24042 Signature analysis, compare recorded with
2219/23472 Confirmation of user for the selection of a program setting	current data, if error then alarm
2219/23473 Program stopped if consumed current to high	2219/24043 Test memory comparing with known stored
2219/24 . Pc safety	valid memory states 2219/24044 Second controller monitors diagnostics system
2219/24001 Maintenance, repair	of first controller
2219/24002 Clock failing, adaptive to clock	2219/24045 Test if memory card is inserted, present
2219/24003 Emergency stop	2219/24046 Test if controller has enough memory available
2219/24004 If control lever, joystick, handle is released,	2219/24047 Count certain number of errors, faults before
spring return to neutral 2210/24005 Inhibit undets central program if default	delivering alarm, stop
2219/24005 Inhibit update control program if default values has been changed by program during	2219/24048 Remote test, monitoring, diagnostic
processing	2219/24049 Use of control bits 2219/24051 Two test pins, one for input and one for output
2219/24006 Code coverage memory:contains data about	2219/24052 Set switch on for diagnostic
addressed addresses during program run	2219/24053 Diagnostic of controlled machine
2219/24007 Backup data if microprocessor not responding	

2219/24054 Self diagnostic	2219/24101 Stop error message after a certain time
2219/24055 Trace, store a working, operation history	2219/24102 Display status of controller
[2219/24056] Portable, detachable module to input test signals, read test results	2219/24103 Graphical display of proces as function of detected alarm signals
2219/24057 Set jumper on board to change user mode to diagnostic mode	2219/24104 Operator can select a graphical screen at his will as help diagnostic
2219/24058 Remote testing, monitoring independent from	2219/24105 Perform an initial display process to check
normal control by pc	displays
2219/24059 Diagnostic programmed in state logic	2219/24106 Display instructions, program statements
2219/24061 Simulator, generates input signals, shows	together with monitored parameter value
output signals of logic 2219/24062 During simulation, test inhibit output to	2219/24107 Display centrally detected user, function changes of remote device
actuators	2219/24108 Correct fault so that microprocessor functions
2219/24063 • • • Select signals as function of priority, importance for diagnostic	correctly, without reset 2219/24109 Execute first diagnostic, service program
2219/24064 Sample rate variable as function of importance	before normal control program
of alarm signals	2219/24111 Inhibit control until control lever is first set to
2219/24065 Real time diagnostics	neutral position 2219/24112 Delay software reset until critical operations
2219/24066 Monitor only devices essential to current process	are finished
2219/24067 Processor stores variables, events and date in eeprom, for external monitor	2219/24113 No transmission of errors to central during intervention of maintenance operator
2219/24068 Find intermittent errors	2219/24114 Continue program if crashed microprocessor,
2219/24069 Diagnostic	program module is not crucial
2219/24071 Online service documentation	2219/24115 Continue critical operation only if detector,
2219/24072 Detect faulty circuit, display on screen and	operator input is satisfied
replace it	2219/24116 Reprogram inserted module, reread parameters
2219/24073 Avoid propagation of fault	to enable operation machine 2219/24117 If error detected, shut down
2219/24074 Probability of defect, seriosity or severity of	2219/24117 In error detected, shut down 2219/24118 Inhibit, disable control if program module not
defect, fault 2219/24075 Predict control element state changes, event	inserted or wrong module addressed
changes	2219/24119 Compare control states to allowed and
2219/24076 Markov model for safety analysis	forbidden combination of states 2219/24121 On fault, detect bit pattern to indicate kind of
2219/24077 Module detects wear, changes of controlled	fault and stop program
device, statistical evaluation [2219/24078] Debounce, correct periodicity of command	2219/24122 Inhibit automatic control if in manual control
2219/24079 Debounce, correct periodicity of command	2219/24123 Alarm filtering, level and direct precursor,
2219/24081 Detect content commands	required action, blocking condition
2219/24082 Detect if driver, actuation circuit is correct	2219/24124 Identification of program, if not assigned for
2219/24083 Detect if actuators are correct, react	machine, reject, stop
2219/24084 Remote and local monitoring, local result to	2219/24125 Watchdog, check at timed intervals
remote, remote takes action	2219/24126 Program stopped if instruction not executed or
2219/24085 Analyze, trace fault signals according to tree,	if output module is missing 2219/24127 Disable, inhibit control signal in I-O interface if
table	alarm status set
[2219/24086] Expert system, guidance operator, locate fault and indicate how to repair	2219/24128 Command and intermediate error feedback
2219/24087 After correct repair, update fault tree	used to verify correct execution
2219/24088 Simulate process graphically using feedback	2219/24129 means for safety such as resettable fuse, PPTC 2219/24131 Noise rejection, shielding board, bus, lines
from real, to prevent or repair 2219/24089 Change colour of message after reading	2219/24132 Over voltage protection
message	2219/24133 Ground each module and total system
2219/24091 Display indication out of order, alarm	2219/24134 Use of high voltage 28-Volt logic level
indication	2219/24135 Use of infra red for optical limit switch against
2219/24092 Warning display lights, lamps, leds on module	day light
2219/24093 Display, show place of error, fault	2219/24136 Monitor load state of battery
2219/24094 Voice alarm	2219/24137 Non volatile memory to store program on
2219/24095 Show timely order of errors	power loss 2219/24138 Battery backup
2219/24096 Show number of error event	2219/24139 Recovery from power loss, failure
2219/24097 Camera monitors controlled machine	2219/24141 Capacitor backup
2219/24098 Scan and display states of all actuators if controller fails	2219/24142 Program has a protected, independent part and
2219/24099 On error, send error over lightdiode to external	a free programmable part
nc display	

pc, display

2219/24143 Inhibit control if device does not answer a start signal within time interval	2219/24184 Redundant I-O, software comparison of both channels
2219/24144 Load new program, overwrite old program only if machine is halted	2219/24185 After repair, update redundant system during non critical periods
2219/24145 Test for collision of actuated devices, articles,	2219/24186 Redundant processors are synchronised
if interference inihibit entry	2219/24187 Redundant processors run identical programs
2219/24146 Configure actuators to be switched off in case	2219/24188 Redundant processors run different programs
of emergency stop	2219/24189 Redundant processors monitor same point,
2219/24147 Program entry, inhibit manual control if in	common parameters
automatic mode	2219/24191 Redundant processors are different in structure
2219/24148 Inhibit local control if in remote	2219/24192 Configurable redundancy
2219/24149 Inhibit program entry if an essential sensor of	2219/24193 Two transducers for same parameter
apparatus is missing, broken	2219/24194 One channel monitors correct programcode
2219/24151 Inhibit programming if physical resources are	execution, other correct process state
missing, no gas for heating	2219/24195 Compare data in channels at timed intervals,
2219/24152 Normal and emergency program are integrated	for equality
2219/24153 System controller can control independent from	2219/24196 Plausibility check in channels for correct
host	sequence or result
2219/24154 Password with time limited access to system, protect protocol	2219/24197 Dual analog output ports, second takes over if first fails
2219/24155 Load, enter program if device acknowledges	2219/24198 Restart, reinitialize, boot system after fault
received password, security signal	detection, hanging up, stalling
2219/24156 Inhibit program entry, keyboard by entering	2219/24199 Recover from fault, malfunction, go to safe
sequence of certain keys	state, correct and set new sequence
2219/24157 Block, inhibit certain inputs by entering certain	2219/24201 Inhibit restart program if start switch fails in
keycode	normal run mode
2219/24158 Access only for service, hide, forbidden	2219/24202 After failure and stop of program, special
tamperfree keys, program 2219/24159 Several levels of security, passwords	switch to restart
2219/24161 Use of key, in key is stored access level	2219/24203 Restart, recover from error only if detected
2219/24162 Biometric sensor, fingerprint as user access	states equal stored states
password	2219/24204 Select restore procedure corresponding to matched abnormal condition, table
2219/24163 Authentication tag in configuration file	2219/24205 Slow down processor activity if temperature
2219/24164 Parts of program accesible only during	rises above limit
execution, no access with programming tool	2219/24206 Identification by portable memory in a key
2219/24165 Use codes to activate features of controller	2219/24207 If processor overloaded, reduce messages sent
2219/24166 Permit from several operators to allow access	by other systems to it
2219/24167 Encryption, password, user access privileges	2219/24208 Go into safety mode if communications are
2219/24168 Identify connected programmer to allow	interrupted
control, program entry	2219/24209 Create film in case of error
2219/24169 Identification of last person who changed	2219/24211 Override normal program, execute urgency
program	program so machine operates safe
2219/24171 Supervisor code to change passwords	2219/24212 Set off alarm state manually, acknowledge to
2219/24172 Use of second password, different from first	restart normal control
2219/24173 One sensor, two I-O channels each for different	2219/24213 No shut down if after emergency detection, all
processor	control parameters are safe
2219/24174 One channel is used for communication while	2219/24214 Detect if analog output signal is within range
other is tested, in redundant I-O	2219/24215 Scada supervisory control and data acquisition
2219/24175 Redundant communication channel, if one fails use the other	2219/24216 Supervision of system
2219/24176 Central controller may override redundant	2219/25 . Pc structure of the system
controller	2219/25001 CEBUS consumers electronics bus
2219/24177 State machine arbitrates which redundant	2219/25002 Interbus-S, output serial out, input serial in, as one shift register
controller is active	2219/25003 M3S bus with six lines, two power, two canbus,
2219/24178 Controlled device decides which redundant	one to initialize, one as dead man switch
controller will be active	2219/25004 Power and data bus
2219/24179 Redundant storage of control parameters	2219/25005 Fluid bus for communication in process system
2219/24181 Fail silent nodes, replicated nodes grouped into	with several fluidic control modules
fault tolerant units	2219/25006 Interface connected to fieldbus
2219/24182 Redundancy	2219/25007 UMS bus
2219/24183 If error, spare unit takes over, message to	2219/25008 Different buses, protocols on same line, also dsl
master, confirm new configuration	2219/25009 Profinet-I-O, producer-consumer mode

2219/25011 Domotique, I-O bus, home automation,	2219/25057 Configuration stored in distributed database for
building automation	real time use
2219/25012 Two different bus systems	2219/25058 Job setup, use also library to select job setup
2219/25013 G64-bus	2219/25059 Iterative configuration of identical modules,
2219/25014 Fieldbus general name of bus connected to	only config first one, copy to other
machines, detectors, actuators	2219/25061 Configuration stored in central database
2219/25015 Gpib-488, ieee-488, hp bus, parallel	2219/25062 Detect physical location of field device
instrumentation bus	2219/25063 Force node into an inactive state when required
2219/25016 Eiba bus, european installation bus association,	2219/25064 Update component configuration to optimize
ib installation bus	program execution
2219/25017 ASI actuator sensor interface, bus, network	2219/25065 Configure attributes of parameters
2219/25018 Only actuator bus, network 2219/25019 Parallel processors coupled to bus by	2219/25066 Configuration stored in each unit
configurable interface card	2219/25067 Graphic configuration control system
2219/25021 Profibus	2219/25068 Check correct configuration of device 2219/25069 Pseudo redundance, eliminate failing element
2219/25022 LAN local area network for controllers	and reconfigure system
2219/25023 Sercos serial real time communications system	2219/25071 Synoptique display of system configuration,
between servo and cpu	layout, evolution
2219/25024 Bitbus from intel	2219/25072 Initialise each module during start up
2219/25025 Only sensor bus	2219/25073 Configuration of keys and related display,
2219/25026 Lon local operating network, uses neuron chip	shown on keys
with three microprocessors	2219/25074 Check system, change failing element, compare
2219/25027 GSC general serial channel	with stored configuration
2219/25028 Power, data and clock bus	2219/25075 Select interconnection of a combination of
2219/25029 Additional logic to mirror certain signals,	processor links to form network
permits node to adapt to bitrate	2219/25076 Configure connected module only if allowed,
2219/25031 TTCAN bus, time triggered can bus	registered module
2219/25032 CAN, canbus, controller area network bus	2219/25077 Each module can be programmed for number of input and output
2219/25033 structure, control, syncronization, data, alarm, connect I-O line to interface	2219/25078 Store in ram a second program adapted to local
2219/25034 Connect module to data, monitor, control lines,	conditions
extra I-O and power to connector	2219/25079 • • • Function module makes bus termination,
2219/25035 Star network	creates local bus on ok from central
2219/25036 • • • Two clocks, high frequency for normal and low	2219/25081 Clone, copy configuration from first device, in
frequency for battery low, sleep	teach mode, to second identical device
2219/25037 Clock line and data line loop in a contrary	2219/25082 Display name of configuration, to recognise
sense, for data stability, settling	how device has been set, programmed
2219/25038 During negative cycle of power supply,	2219/25083 For each subsystem a configuration
processor is set to active, else inactive	2219/25084 Select configuration as function of operator
2219/25039 Clock	2219/25085 Several function expansion units for master,
2219/25041 Select between several clock signals	main unit, universal system
2219/25042 Clock derived from power supply	2219/25086 Assign functions to group of complete or
2219/25043 Superposition time and other pulses	partial cells, modules 2219/25087 Selector switch to set function of each module
2219/25044 Radio controlled clock	2219/25088 Define scale value of analog signal, min and
2219/25045 Electronic cam, encoder for sequence control as	max value
function of position, programmable switch pls 2219/25046 Real time clock to sample I-O states and store	2219/25089 Define state of digital signal, open, closed,
them in memory	maintained, momentary
2219/25047 Common clock for redundant processors	2219/25091 Of alternative and parallel parts of program into
2219/25048 Master clock and several frequency dividers,	synchronised tasks
for motion and sequence control	2219/25092 Customized control features, configuration
2219/25049 Master processor gives timing information to	2219/25093 During start, integration into machine, send
slaves	module functionality to scheduler
2219/25051 For serial communication a separate clock and	2219/25094 At start, I-O modules receive functionality and
data line	check with its own functionality
2219/25052 VCO voltage controlled oscillator	2219/25095 Detect kind of display to configure display
2219/25053 Frequency pulses as function of speed	routine 2210/25006 Detect addresses of connected LO modules
2219/25054 Calibration timer, compare 1st, number of	2219/25096 Detect addresses of connected I-O, modules 2219/25097 Detect control panel connected, select
pulses during calibration with second counter	corresponding program and parameters
2219/25055 During calibration adapt vco, counter to deliver	2219/25098 Detect connected sensors, set parameters, gain
wanted frequency, pulses	automatically
2219/25056 Automatic configuration of monitoring, control	,

system as function of operator input, events

2219/25099 Detect configuration I-O and select needed	2219/25143 Buffer for communication between two cpu
program	2219/25144 Between microcomputers, processors
2219/25101 Detect connected module, load corresponding	2219/25145 I-O communicates with local bus at one end
parameters, variables into module	and with fieldbus at other end
2219/25102 Detect connected actuator, by code, select	2219/25146 Communication between main and expansion
compensation non linearity	unit, only clock and data
2219/25103 Detect during start, number of modules, groups,	2219/25147 Before communication, check if optical fiber is
sub groups 2219/25104 Detect transfer of control module, use mean	correctly attached 2219/25148 Before communication, check if I-O is powered
default values instead of normal	2219/25149 Receiver detects communication error and
2219/25105 By cable integrated in controlled machine,	requests emitter to retransmit data
fixed	2219/25151 Check appropriate protocol voltage levels
2219/25106 Pluggable card, magnetic, smart with	2219/25152 Parity detection
configuration data, pulled out after loading	2219/25153 Checking communication
2219/25107 Pluggable card, magnetic or smart with	2219/25154 Detect error, repeat transmission on error,
configuration data, staying in device	retransmit
2219/25108 Dipswitches combined with bcd switch instead of multiple dipswitches	2219/25155 Encoded transmission against noise
2219/25109 Eeprom loaded from external device with	2219/25156 Full echo communication check, echo back
configuration data	2219/25157 Checksum CRC
2219/25111 Using broadcast message	2219/25158 Watchdog
2219/25112 Using firmware stored in processor	2219/25159 Respond to signal if initialisation and address are received within set interval
2219/25113 Strapping diodes	2219/25161 Only receiving station, read several times
2219/25114 Jumpers	message, select correct one or reject
2219/25115 Card, board with configuration switches	2219/25162 Contention, if several transmitters avoid
2219/25116 Pluggable, detachable cassette loads	collision, by separate transmittor code
configuration	2219/25163 Transmit twice, redundant, same data on
2219/25117 • • • Resistors, value, combination defines a digital value	different channels, check each channel

two layers, networks	2219/31412 Calculate machining time, update as function of
2219/31371 VMD virtual manufacturing device for robot	load, speed
task control, cell Mas manufacturing execution system	2219/31413 Estimate capacity of plant
2219/31372 Mes manufacturing execution system	2219/31414 Calculate amount of production energy, waste and toxic release
2219/31373 Vou virtual operative organisational unit, extension of vmd	2219/31415 Cost calculation in real time for a product
2219/31374 FAL fieldbus application layer, application	manufactured
service elements ase and application relations	2219/31416 Calculate effect of different actuators on
ar	optimal path sequence
2219/31375 LAS link active scheduler, distribute bandwidth	2219/31417 Calculate capacity by back propagating
between processing nodes	capacity, constraint from last to first module
2219/31376 MFL material flow	2219/31418 NC program management, support, storage,
2219/31377 From stored machine groups and relation	distribution, version, update
machine workpiece, send workpiece to idle	2219/31419 Select file from a list, directory
2219/31378 Queue control	2219/31421 File with parameters for station and
2219/31379 Master monitors controllers, updates	identification of station
production progress, allocates resources	2219/31422 Upload, download programs, parameters from,
2219/31381 Matrix cluster, machines in cell according to	to station to, from server
parts, row is part, column is machines	2219/31423 After cap, send resulting programs to different
2219/31382 Find shortest way, route	nc machines
2219/31383 Compare ratio of running work with optimum,	2219/31424 Print label of finished part, with info, history,
decrease number of idle machines	attach to part, docket
2219/31384 Produce construction sequence, make parts,	2219/31425 Plan availability of operator for cell as function
store, assemble equipment, ship	of time and operation calendar
2219/31385 Determine rate of MFL out of each process	2219/31426 Real time database management for production
within each workstation	control
2219/31386 Determine size of batch of material for each	2219/31427 Production, CAPM computer aided production
process to meet mfl rate	management
2219/31387 If resources, material, pieces under tolerance	2219/31428 Production management for lot production and
level, renew them until upper level	for individual components of lot

2219/31429 Predict end of job execution, schedule new job	2219/31471 Operator can select a graphical screen at his
beforehand	will as help diagnostic
2219/31431 Identify and classify excess raw material; reuse	2219/31472 Graphical display of process
2219/31432 Keep track of conveyed workpiece, batch, tool, conditions of stations, cells	2219/31473 Fisheye view, sharp detailed view of main subject, rest much smaller, navigate
2219/31433 Diagnostic unit per zone of manufacturing 2219/31434 Zone supervisor, collects error signals from,	2219/31474 Icon display for quick access of detailed information
and diagnoses different zone	2219/31475 Zoom or pan display for flexible access to
2219/31435 Paging support with display board, status monitoring and report compiling	information 2219/31476 Display of several transactions, sub-displays
2219/31436 Host monitors plc, control processor without interrupting its program	for other transactions 2219/31477 Display correlated data so as to represent the
2219/31437 Monitoring, global and local alarms	degree of correlation
2219/31438 Priority, queue of alarms	2219/31478 Display all processes together or select only
2219/31439 Alarms can be warning, alert or fault	one
2219/31441 Simocode, overload protection, detection of trips, life time connected to fieldbus	2219/31479 Operator select part of process he wants to see, video image is displayed
2219/31442 Detect if operation on object has been executed	2219/31481 • • • Safety monitoring system, redundant display, print systems for process data
correctly in each station 2219/31443 Keep track of nc program, recipe program	2219/31482 Verify working state of printers, displays,
2219/31444 Compare actual manufacturing sequence with	switch over if defect
simulated sequence, correct actual 2219/31445 Detect changed working conditions, to correct	2219/31483 Verify monitored data if valid or not by comparing with reference value
machine load, balance	2219/31484 Operator confirms data if verified data is
2219/31446 Detect if workpiece, object present	correct, otherwise amends data
2219/31447 Process error event detection and continuous process image detection, storage	2219/31485 Verify and update all related data in relational database
2219/31448 Display at central computer, slave displays for	2219/32 • Operator till task planning
each machine unit	2219/32001 Computer assisted machining, signals guide
2219/31449 Monitor workflow, to optimize business,	operator to manual machine object 2219/32002 Operator interface, manual control at cell, if
industrial processes 2219/31451 Petrinet for monitoring process	host fails or priority
2219/31452 Send a warning message that an event has to be	2219/32003 Manual control at central control to control
monitored before the event occurs	workcell, select pallet 2219/32004 Graphical, textual instructions, sheet for
2219/31453 Repeat sending warnings to operator until certain event is monitored	operator to resume process
2219/31454 Keep track of vehicles	2219/32005 Graphical, text operator instructions
2219/31455 Monitor process status	synchronous with product distribution
2219/31456 Product progress, taking into account products	2219/32006 Operator addresses machines to give
on vehicle	commands or retrieve data
2219/31457 Factory remote control, monitoring through internet	2219/32007 Operator is assisted by expert system for advice and delegation of tasks
2219/31458 Test workpiece during transport	2219/32008 Operator changes schedule, workload in
2219/31459 Library with metrology plan for different type of workpieces	allowed range by graphical interface 2219/32009 Optimal task allocation between operator and
2219/31461 Use risk analysis to identify process parts that	machine
should be specially monitored 2219/31462 Add time stamp to alarm message	2219/32011 Operator adapts manufacturing as function of sensed values
2219/31463 Status of whole system calculated from status	2219/32012 Operator must signify his continued attendance at the workstation
of its components 2219/31464 Select between different models corresponding	2219/32013 Operator marks processes, scheduler detects
to diff process control configurations	marks, releases control to operator
2219/31465 Determine which variables of the system to be	2219/32014 Augmented reality assists operator in maintenance, repair, programming, assembly,
monitored 2219/31466 Display position of different workpieces, tools	use of head mounted display with 2-D 3-D
in system	display and voice feedback, voice and gesture command
2219/31467 Display of operating conditions of machines, workcells, selected programs	2219/32015 Optimize, process management, optimize production line
2219/31468 Display jig, pallet number, status and clamp jig	2219/32016 Minimize setup time of machines
number	2219/32017 Adapt real process as function of changing
2219/31469 Graphical display of process as function of	simulation model, changing for better results
detected alarm signals	2219/32018 Adapt process as function of results of quality
	measuring until maximum quality

2219/32019 Dynamic reconfiguration to maintain optimal design, fabrication, assembly	2219/32061 Central controls modules grouped according to function
2219/32021 Energy management, balance and limit power to tools	2219/32062 Set machines to new lot work, send them operation schedule, nc and handling data
2219/32022 Ordering, remote ordering, enter article and operations needed, create jobfile	2219/32063 Adapt speed of tool as function of deviation from target rate of workpieces
2219/32023 Print label, instructions for operator and job	2219/32064 Production change over
code for machining parameters	2219/32065 Synchronise set points of processes
2219/32024 Remote ordering, electronic selection article and fitting to form of client	2219/32066 Central stores operation code in id and in concerned station
2219/32025 Automatic marking of article	2219/32067 Change combinations of operation codes in
2219/32026 Order code follows article through all operations	station, id for flexibility 2219/32068 Execution at station only permitted if operation
2219/32027 Order, plan, execute, confirm end order, if	code of station and id equal
unfeasible execute exception operation 2219/32028 Electronic catalog, to select material, resources,	2219/32069 Use of multiple id to prepare program for station before pallet in station
make lists with prices	2219/32071 Adaptive fuzzy controller, tunes itself as
2219/32029 Enter also delivery location, transport means,	function of machine parameter variation
kind of truck 2219/32031 Use item and structure information	2219/32072 Distributed fuzzy controllers
2219/32032 Salesman creates order, system answers back	2219/32073 If inspection needed, stop machining, execute separate inspection program
with price, estimated date	2219/32074 History of operation of each machine
2219/32033 Send article design, needed material, packaging	2219/32075 Predict workpiece measurements from
and shipping info to manufacturer	measurements of previous workpieces
2219/32034 Electronic market, network broker2219/32035 Compose, configure article and order	2219/32076 Adjust feedback from previous processes as function of elapsed time
2219/32036 Enter data, values for custom made articles	2219/32077 Batch control system
2219/32037 Order picking	2219/32078 • • • Calculate process end time, form batch of
2219/32038 Client can develop programs, parts on remote	workpieces and transport to process
server located by manufacturer	2219/32079 Use of common resources
2219/32039 Send also testing program	2219/32081 Sub batch, machine, assemble only part of the
2219/32041 Combine orders from different customers	whole batch 2219/32082 Planing, material requiring planning MRP,
2219/32042 Halting, initiating or resuming production of a product on order	request 2219/32083 Alternative, variant operation planning,
2219/32043 Program, information flow 2219/32044 Shift workpiece and agv, carriage data in	revision specification of product
memory on advance to next station	2219/32084 Planning of configuration of product, based on
2219/32045 Each machine knows sequence of pallets, each	components 2219/32085 Layout of factory, facility, cell, production
pallet knows sequence of operations 2219/32046 On detection workpiece code load program for	system planning
workpiece from central 2219/32047 Workcell end instruction selects next	2219/32086 Integrate process planning and job shop scheduling
workpiece with related program	2219/32087 Decentral planning, each plant involved takes
2219/32048 Wait state between two successive machining	part of global
steps	2219/32088 Master production planning, highest level
2219/32049 Store program data, manufacturing history on workpiece, shifts to next	2219/32089 Action and material and technology combined to manufacture product
2219/32051 Central control, modify program slave	2219/32091 Algorithm, genetic algorithm, evolution
computers as function of production demand from host	strategy 2219/32092 Heuristic algorithm, accept feasible solution
2219/32052 Lookup table, identify job to be executed by	and attempt to improve it
master or slave	2219/32093 Search, adaptive, after each iteration some
2219/32053 Adjust work parameter as function of other cell	search directions are forbidden
2219/32054 Send request for object carry out to other cell	2219/32094 Dedicated language for batch processing, enter number of workpieces
2219/32055 Identify workpiece, read status centrally, machine, adapt status centrally	2219/32095 Text, menu driven editor for batch
2219/32056 Balance load of workstations by grouping tasks	programming, phase sequence, parameters
2219/32057 Control cell as function of correlation between	2219/32096 Batch, recipe configuration for flexible batch
stored and detected machine state	control Paring are growning for florible betch
2219/32058 Execute program as function of deviation from	2219/32097 Recipe programming for flexible batch 2219/32098 Batch programming using oop
predicted state, result 2219/32059 Send code, data for workpiece to each	2219/32099 CAPP computer aided machining and process
workstation to be used, update data	planning

2219/32101 CASE based process planning, using older, known case	2219/32142 Define device, module description using xml format file
2219/32102 Select machine type	2219/32143 Use css style sheets as control parameters
2219/32102 Select machine type 2219/32103 Select size of tool	2219/32144 Define device description using dd files
2219/32104 Data extraction from geometric models for	2219/32145 Manual, enter identification, name workpiece
process planning	and teach manufacturing data
2219/32105 Calculate machining axis, best feasible	2219/32146 Display parts, manufacturing conditions to
orientation for machining	enter conditions for selected part
2219/32106 Calculate machining volumes for turning	2219/32147 Edit teached data to change operation
operations	parameters of workstations
2219/32107 Operative process planning	2219/32148 Enter correction data at a station, also
2219/32108 From order, production time divide into special	transmitted to all downstream stations
and normal operations	2219/32149 Display working condition data, real measured
2219/32109 Divide process into machining methods	data and tolerance
2219/32111 PPS production planning system	2219/32151 Prepare teach data by selecting data from two
2219/32112 PPS and MS Office integrated	tables as function of type of work
2219/32113 Machine load and characteristic curves	2219/32152 Inhibit further editing of entered parameters
2219/32114 Part type selection, for simultaneous processing	2219/32153 Exchange data between user, cad, caq, nc, capp
2219/32115 Machine grouping, each machine in each group	2219/32154 Object, attribute for geometry, technology,
performs same operations	function oop
2219/32116 Production ratio, proportion in which selected	2219/32155 Editor and library for objects
part types will be produced	2219/32156 Each defined object has corresponding set of
2219/32117 Resource allocation, of number of pallets,	geometrical macros
fixtures of each type to part type	2219/32157 Create a new object by combining existing
2219/32118 Loading, allocates operations and tools to	objects
selected part type	2219/32158 Object groups, for object replication, naming,
2219/32119 Order handling and manufacturing module and	messaging and retrieving
offline monitoring	2219/32159 Each hardware unit together with its software
2219/32121 Read identification of pallet, conveyor and	forms one object
enter data for manufacturing	2219/32161 Object oriented control, programming
2219/32122 Documentation of programmable electronic	2219/32162 Tasks or control icons are linked to form a job
system	2219/32163 Indicate synchronisation tags on icons of tasks
2219/32123 Use of ms windows for automation, connected	2219/32164 Petrinet and procedural language combined
to mms manufacturing message system	2219/32165 Petrinet
2219/32124 Program hybrid system, part sequence, part	2219/32166 Convert petrinet to sequence program for cell
continous	and to control program for machine
2219/32125 Maple manufacturing application programming	2219/32167 Convert petrinet to ladder diagram
environment	2219/32168 Generation and analysis of synthesis rules for
2219/32126 Hyperlink, access to program modules and	petrinet
to hardware modules in www, web server,	2219/32169 Stochastic pn, spn
browser	2219/32171 Transform, convert operator goals and
2219/32127 Read identification of part and generate	information into petri nets
automatically manufacturing conditions	2219/32172 Control petri net together with modeling petri
2219/32128 Gui graphical user interface	net, cascaded
2219/32129 Select program for specified machine from	2219/32173 Table, memory table with identification code
library, file server	for all parts to be used
2219/32131 Use job graph	2219/32174 Memory table parts classification and working,
2219/32132 SFC shop floor control, to develop and build	manufacturing conditions
control system for factory	2219/32175 Table with correlation between part codes and
2219/32133 Commands from program of other controller	part classification
cause recompilation of local program	2219/32176 Correspondance between manufacturing part
2219/32134 Dynamic generation of web pages from	list and design part list
program code	2219/32177 Computer assisted quality surveyance, caq
2219/32135 APC advanced process control applications	2219/32178 Normal and correction transferline, transfer
2219/32136 Web service oriented architecture for	workpiece if fault
manufacturing and automation	2219/32179 Quality control, monitor production tool with
2219/32137 Configure, connect, combine different program	multiple sensors
modules Soloet hardware devices at workstation needed	2219/32181 Monitor production, assembly apparatus with
2219/32138 Select hardware, devices at workstation, needed for, to be used at cell, node	multiple sensors
2219/32139 Select at workstation control parameters for	2219/32182 If state of tool, product deviates from standard,
cell, node	adjust system, feedback
2219/32141 Define type of I-O, analog, digital, pulse	2219/32183 Test cell
2217/32141 • • • Define type of 1-O, analog, digital, pulse	

2219/32184 Compare time, quality, state of operators with threshold value	2219/32226 Computer assisted repair, maintenance of system components
2219/32185 Calculate entropy, disorder	2219/32227 On error detected by zone supervisor,
2219/32186 Teaching inspection data, pictures and criteria	maintenance of particular zone
and apply them for inspection	2219/32228 Repair, rework of manufactured article
2219/32187 Correlation between controlling parameters for	2219/32229 Repair fault product by replacing fault parts
influence on quality parameters	2219/32231 Inspection and correction, repair station in one
2219/32188 Teaching relation between controlling	unit, correction data in memory
parameters and quality parameters	2219/32232 Inspection and correction, repair station are
2219/32189 Compare between original solid model and	separate, transmit correction data
measured manufactured object	2219/32233 Scheduling repair
2219/32191 Real time statistical process monitoring	2219/32234 Maintenance planning
2219/32192 After inspection create correction table with	2219/32235 Sharing of data between process control and
position, correction data	maintenance management computers
2219/32193 Ann, neural base quality management	2219/32236 Automatic order of parts needed for
2219/32194 Quality prediction	maintenance schedule
2219/32195 Feedforward quality control	2219/32237 Repair and rework of defect, out of tolerance
2219/32196 Store audit, history of inspection, control and	parts, reschedule
workpiece data into database	2219/32238 Scheduler triggers generation of nc program for actual selected machine
2219/32197 Inspection at different locations, stages of manufacturing	2219/32239 Avoid deadlock, lockup
2219/32198 Feedforward inspection data for calibration,	2219/32241 Resource editor
manufacturing next stage	2219/32242 Reschedule without propagation of
2219/32199 If number of errors grow, augment sampling	interruptions to other cells
rate for testing	2219/32243 Rerouting parts
2219/32201 Build statistical model of past normal proces,	2219/32244 By using graphical display of array and
compare with actual process	selecting elements, rearrange them
2219/32202 Integration and cooperation between processes	2219/32245 Reentrant scheduling, workpiece can return to
2219/32203 Effect of material constituents, components on	same machine
product manufactured	2219/32246 Virtual reality based interface scheduler
2219/32204 Performance assurance; assure certain level of	2219/32247 Real time scheduler
non-defective products	2219/32248 Create schedule from elementary operations
2219/32205 Use model error adapted to type of workpiece	from database
2219/32206 Selection from a lot of workpieces to be	2219/32249 Repair, rework of defect, out of tolerance part
inspected	in next station by reconfiguring it
2219/32207 Action upon failure value, send warning,	2219/32251 Normal and special order production lines for
caution message to terminal	different types of workpiece
2219/32208 Rearrange production line 2219/32209 Stop production line	2219/32252 Scheduling production, machining, job shop
2219/32211 Outputs new workorders to operators	2219/32253 As a function of, change of machine operation
2219/32212 Gutputs new workdructs to operators 2219/32212 If parameter out of tolerance reject product	2219/32254 Work sequence, alternative sequence 2219/32255 Required time for work temperature control
2219/32213 If parameter out of tolerance during limited	2219/32256 Due dates, pieces must be ready, priority of
time, accept product on condition	dates, deadline
2219/32214 Display on screen what fault and which tool	2219/32257 Tool replacement minimization
and what order to repair fault	2219/32258 Resource, machine assignment preferences,
2219/32215 If detected shape not correct, simulate new	actual and anticipated load
machine, tool and adapt path	2219/32259 Flexibility, polyvalent machine, large buffers,
2219/32216 If machining not optimized, simulate new	permutation operations, alternative
parameters and correct machining	2219/32261 Rearrange production line as function of
2219/32217 Finish defect surfaces on workpiece	operator rating
2219/32218 Sort workpieces as function of quality data	2219/32262 Work manhours, number of operators and work
2219/32219 Slow down production after failure	place
2219/32221 Correlation between defect and measured	2219/32263 Afo products, their components to be
parameters to find origin of defect	manufactured, lot selective
2219/32222 Fault, defect detection of origin of fault, defect	2219/32264 Setup time
of product 2219/32223 Fixture failure diagnosis, measure assembly,	2219/32265 Waiting, queue time, buffer
derive influence of fixture on error	2219/32266 Priority orders
2219/32224 Identify parameters with highest probability of	2219/32267 Dynamic throughput maximization
failure	2219/32268 Available parts, available materials 2219/32269 Decision, of job release, select job to be
2219/32225 Randomize workpiece treatment order within	launched next in shop
lot to improve lot-to-lot comparisons	2219/32271 Decision of job dispatching, select job to
-	process next on each machine
	•

2219/32272 • • • Decision of next visiting machine selection, where job is to go	2219/32317 Smallest ratio for imminent processing time divided by total processing time
2219/32273 • • Decision of job pulling, select job to put in	2219/32318 Smallest value of product of imminent
input buffer of next machine if conflicts	processing time with total processing time
2219/32274 Event is triggered when first unit of first lot	2219/32319 Shortest imminent operation time, part of
enters or last unit leaves processing	machining time
2219/32275 Job, recipe cascading: no delay, next job is	2219/32321 Largest processing, machining time
started immediatly when first is finished	2219/32322 Machines with least frequency of errors
2219/32276 For tool feeding schedule	2219/32323 Determine lot priority as function of sum of
2219/32277 Agy schedule integrated into cell schedule	queue and processing time
2219/32278 Schedule of overhead material handlers, robot	2219/32324 Quality data determines optimum machine
gantry	sequence selection, queuing rules
2219/32279 • • • Operator scheduling for load, unload, walk and wait in a cell with plural machines	2219/32325 Object oriented scheduling, use machine, part, tool object and coordinator
2219/32281 Single machine scheduling, one machine,	2219/32326 Local scheduler, each machine own scheduler,
several jobs	independent from defective machines
2219/32282 For a quick and slow production line	2219/32327 Structure, fuzzy logic expert system scheduler
2219/32283 Machine scheduling, several machines, several	2219/32328 Dynamic scheduling, resource allocation, multi
jobs	agent negotiation
2219/32284 Job shop, two, more operations may not occupy	2219/32329 Real time learning scheduler, uses ANN, fuzzy
same machine simultaneously	2219/32331 Network of coordinating planning systems for
2219/32285 Multi manipulator assembly cell	each cell, factory
2219/32286 Monitoring items connected to certain different entities, activities	2219/32332 Expert scheduler 2219/32333 Use of genetic algorithm
2219/32287 Medical, chemical, biological laboratory	2219/32334 Use of reinforcement learning, agent acts,
2219/32288 Create daily or weekly production matrix	receives reward
2219/32289 Determine number of components, start of their	2219/32335 Use of ann, neural network
production, allocate processor	2219/32336 Normal, special order lines share some
2219/32291 Task sequence optimization	common machines, part of production line
2219/32292 Large, medium and fine schedule, with	2219/32337 Simulation, statechart SC
feedback from fine to large	2219/32338 Use new conditions for model, check, calculate
2219/32293 Minimize work in progress, system at	if model meets objectives
maximum productivity 2219/32294 Maximize throughput of cell	2219/32339 Object oriented modeling, design, analysis, implementation, simulation language
2219/32295 Production start time from order and	2219/32341 Grafcet model, graph based simulation
production specification, satisfaction degree	2219/32342 Real time simulation
2219/32296 If error search in a repair library, trained by	2219/32343 Derive control behaviour, decisions from
operator, to correct schedule	simulation, behaviour modelling
2219/32297 Adaptive scheduling, feedback of actual proces	2219/32344 Modular verification of real time systems
progress to adapt schedule	2219/32345 Of interconnection of cells, subsystems,
2219/32298 Designate at least two group of articles, first	distributed simulation
with priority, reschedule second 2219/32299 Divide job shop into number of workcenters	2219/32346 Using acd, activity cycle diagram
2219/32299 Simulate production, process stages, determine	2219/32347 Knowledge based simulation engine, use answers from user, database
optimum scheduling rules	2219/32348 Process reengineering, rethink manufacturing
2219/32302 Each pallet has working plan, information and	process, continuous improve
machine selection data	2219/32349 Simulate effect of stoppages of production
2219/32303 Convert program to fit rescheduled machine	facilities, operate as function of simulation
2219/32304 Minimize flow time, tact, shortest processing,	2219/32351 Visual, graphical animation of process
machining time	2219/32352 Modular modeling, decompose large system in
2219/32305 Fastest interrupt time, change jobs dynamically	smaller systems to simulate
to fastest machine	2219/32353 Use elementary control task, finite state
2219/32306 Rules to make scheduling decisions 2219/32307 Last buffer first serve, life	machine and loop, inhibit, synchronisation connections
2219/32308 Shortest, narrowest non full queue	2219/32354 Divide, analyse process into subprocesses, until
2219/32309 Shortest, narrowest non run queue	elementary unit operations
2219/32311 Shortest remaining capacity	2219/32355 Simulate control process using virtual bus
2219/32312 Largest imminent operation time	2219/32356 For diagnostics
2219/32313 Shortest remaining processing time	2219/32357 Simulation of material handling, flexible
2219/32314 Largest remaining processing time	conveyor system fcs
2219/32315 Machine with least work	2219/32358 Strain, stress of manual work, operator strain
2219/32316 First buffer first serve, fifo	2219/32359 Modeling, simulating assembly operations
	2219/32361 Master production scheduling

2219/32362 Bulk manufacturing, handling dry or fluid products	2219/32405 Hybrid supervisor control, des supervisor and diagnostic and alternate strategy route
2219/32363 Batch job routing in operation overlapping	2219/32406 Distributed scada
2219/32364 Simulate batch processing	2219/32407 Real time processing of data
2219/32365 For resource planning	2219/32408 Case based diagnosis to assist decision maker,
	operator
2219/32366 Line performance evaluation	*
2219/32367 Parallel experimentation machines	2219/32409 Adaptive agent for diagnostic, helps operator to describe new cases
2219/32368 Quality control	2219/32411 Derive control data from displayed element,
2219/32369 Cape-mode computer aided plant enterprise modeling environment for plant life cycle	logic for it and feedback data
modelisation & management	2219/32412 One engineering, workstation can supervise
2219/32371 Predict failure time by analysing history fault	several processes
logs of same machines in databases	2219/32413 Pc generates control strategy, download in plc
2219/32372 Petrinet, coloured, inhibitor arc, timed, object	to monitor and react to events
token Petrinet	2219/32414 Workstation has two displays, for process
2219/32373 Timed petrinet, timed event graph	control and for general applications
2219/32374 Display of petrinet, graph editing	2219/32415 Select tools in next workcell during transport
2219/32375 Petrinet synthesis tool	workpiece
2219/32376 Coloured petrinet	2219/32416 Tool information for program to use and
2219/32377 Cbpn controlled batches petrinet, model	needed timing, adapt timing
influence control part on physical part	2219/32417 Minimize number of tools, only a specific
2219/32378 Fuzzy timed petrinet	machine can process certain operations
2219/32379 Object oriented petrinets	2219/32418 Machine workload balance, same tools for pool
2219/32381 Continuous petrinet, contrary of timed petrinet	of machines for same operations
2219/32382 Hybrid petrinet, comprises continuous and	2219/32419 All tools available, each part can fully be
timed petrinet	processed on a single machine
2219/32383 Controlled speed continuous petrinet, considers	2219/32421 Tool management incorporated in kernel of nc
delays in execution and transport time	control
2219/32384 Fuzzy petrinet fpn	2219/32422 Tool management and database management
2219/32385 What is simulated, manufacturing process and	2219/32423 Task planning
compare results with real process	2219/32424 Task flow editing
2219/32386 Arm accurate robot motion time model, needed	2219/33 . Director till display
in scheduling	2219/33001 Director is the nc controller, computer
2219/32387 Effects of highspeed hardware operations on	2219/33002 Artificial intelligence AI, expert, knowledge,
throughput, use scheduler	rule based system KBS
2219/32388 Autonomous flexible system, cells and agy	2219/33003 Algorithm, hashing algorithm
autonomous	2219/33004 Manual control of manipulator, machine
2219/32389 Reception, assembly, testing, management	2219/33005 Manually but assisted by using sensors
workorder, schedule, history, file, packing	2219/33006 Ama allocation manual automatic work
2219/32391 Machining center, pallet stocker, setup station,	between machine, manipulator and man
conveyor, control unit	2219/33007 Automatically control, manually limited,
2219/32392 Warehouse and loading, unloading station and	operator can override control
shop and machining centers and in out buffer	2219/33008 Operate manually only in defined, limited zone
2219/32393 Host and central distribution control between	area
storage and cells	2219/33009 ART adaptive resonance theory, place input
2219/32394 Fractal manufacturing system with autonomous	patterns in clusters during learning
agents: observer, analyser, organiser, resolver,	2219/33011 Link between hidden and input layer is
reporter	sigmoid, and between output is linear
2219/32395 Manufacturing structure is flow shop, mass	2219/33012 Kohonen network, single layer with neurodes,
production	associated with codebook vector
2219/32396 Job shop, batch production system	2219/33013 Higher order multilayer artificial neural
2219/32397 Machining cells	network ANN, input terms has square, cubic
2219/32398 Operator controls setting, changing of setting,	terms of input, output
of different machines	2219/33014 BAM bidirectional associative memory
2219/32399 Select lan by switching bus connected to	artificial neural network
several lan	2219/33015 Time delay artificial neural network
2219/32401 Select displays by switching bus connected to	2219/33016 Pi sigma network, summing in hidden layers,
several displays	product in output layer
2219/32402 Select one lan to be connected to one display	2219/33017 Local linear nested network, coarse at root,
by central control	split up and build tree
2219/32403 Supervisory control, monitor and control	2219/33018 Adaline network, n inputs with n weights, sum,
system, by operator or automatic	one output 2219/33019 Lapart, two art with lateral priming connection
2219/32404 Scada supervisory control and data acquisition	
	between output and vigilance nodes

2219/33021 Connect plural macrocircuits, neural network modules in a larger network	2219/33061 Behaviour fusion, each layer can influence other by suppression or amplification
2219/33022 One network for learned signal values, one network for unknown signal values	2219/33062 Self repair 2219/33063 Generic coordination, master agent to data
2219/33023 • • • Ann with single, only one output	manager agent to tasks to active agent
2219/33024 RAM artificial neural network, several lookup tables addressed by input section, output	2219/33064 Manufacturing planning and control agent and domain blackboards
summed	2219/33065 Ontogenetic learning, agent learns and adapt its
2219/33025 Recurrent artificial neural network	own behaviour
2219/33026 Wavelet artificial neural network, wavelet orthogonal decomposition for artificial neural network approximation.	2219/33066 Phylogenetic learning, group agents learn and adapts their behaviour
network approximation 2219/33027 Artificial neural network controller	2219/33067 HCP help based cooperation protocol, when to ask or give help from or to agent
2219/33028 Function, rbf radial basis function network, gaussian network	2219/33068 CCP coordination cooperation protocol, make optimal decisions with other agents
2219/33029 ANNS artificial neural network with sigmoid function	2219/33069 Immune algorithm, agent distinguishes self and foreign, lymphocyte, antibody agent
2219/33031 Spline membership function	2219/33071 Self sufficient, agent responsible for own
2219/33032 Learn by changing input weights as function of	energy, tools
position error	2219/33072 Two layer agent for execution of tasks and for
2219/33033 Identification neural controller copies weight to	communication, coordination
system neural controller 2219/33034 Online learning, training	2219/33073 Ion control agent has communication, database, suggestion, decision, action, detect
2219/33035 Slow learning combined with fast learning	2219/33074 • • • Calculation loop, first one slow changing value,
artificial neural network, two time scale ann	then several quick varying values
2219/33036 Error back propagation	2219/33075 Calculate only necessary, critical values, to
2219/33037 Learn parameters of network offline, not while	speed up calculation
controlling system 2219/33038 Real time online learning, training, dynamic	2219/33076 Optimize time by parallel execution of independent blocks by two processors
network	2219/33077 Calculation iterative, recursive
2219/33039 • • • Learn for different measurement types, create for each a neural net	2219/33078 Error table, interpolate between two stored values to correct error
2219/33041 Structure optimization and learning of artificial neural network by genetic algorithm	2219/33079 Table with functional, weighting coefficients, function
2219/33042 Non linear filtering, recursive least squares	2219/33081 Parallel computing, pipeline
2219/33043 Extended kalman filter	2219/33082 Data parallelism, one administrative process
2219/33044 Supervised learning with second artificial neural network	and many worker process 2219/33083 Clock for microprocessor synchronized with
2219/33045 Selforganizing network	pulses from encoder
2219/33046 Forward propagation error	2219/33084 Clock for microprocessor synchronized with
2219/33047 Dynamic node creation, increase internal nodes	multiplexer
if error too large	2219/33085 Real time calendar clock
2219/33048 By using kd tree data structure and delaunay	2219/33086 Interrupt frequency as function of rating of
linear interpolation, triangulation	servomotor or desired control frequency
2219/33049 Cooperative coaching, each controller has own minimum, switch to lowest	2219/33087 Two clock, clock for software counter and calender clock, synchronized
2219/33051 BBC behavior based control, stand alone	2219/33088 Clock
module, cognitive, independent agent	2219/33089 Two clock, one for sequence control, one for motion control, pulses
2219/33052 Subsumption architecture, behavioral modules	2219/33091 Two clock, one for controller and one for
in layers, override older ones 2219/33053 Modular hardware, software, easy	calibration
modification, expansion, generic, oop	2219/33092 Using several selectable and settable dividers
2219/33054 Control agent, an active logical entity that can	2219/33093 Real time clock interface between serial I-O
control logical objects	and processor
2219/33055 Holon, agent executes task and cooperates with other, distributed control	2219/33094 Send clock from pc board, via extension bus to PLL circuit on nc boards, to servo
2219/33056 Reinforcement learning, agent acts, receives reward, emotion, action selective	2219/33095 External clock delivers interrupts for real time execution of programs
2219/33057 If no module available to execute task, adapt module and execute task	2219/33096 Use clock to control main spindle rotational speed
2219/33058 Low level element designed for reliability, not	2219/33097 Variable ticks, align clocks, to synchronise
for speed, only small task	cycles with other machine, robot
2219/33059 High level competence, system action module sam, configuration and task modules	2219/33098 Several nc machines, dnc, cnc

2219/33099 Computer numerical control [CNC]; Software control [SWC]	2219/33138 Control program and communication are totally separated
2219/33101 Dnc, direct numerical control 2219/33102 Dnc and cnc combined	2219/33139 Design of industrial communication system with expert system
2219/33103 Object manager handles objects having own procedures, messages oop	2219/33141 Communication system software module independent from medium, protocol, address
2219/33104 • • • Tasks, functions are distributed over different	2219/33142 Address switches on each controller, peripheral are set by operator
2219/33105 • • Identification of type of connected module, motor, panel	2219/33143 Position of module in ring, loop determines address of module
2219/33106 Configure I-O by using logical and physical address	2219/33144 Module clock, synchronised by controller message, to send message in time slice
2219/33107 Designate each actuator by a name and corresponding operations	2219/33145 Count clock pulses to determine address of node, module
2219/33108 Exchange of type of controller is easy, before operation, adapt control to type	2219/33146 Each node occupies in address space a length equal to number of bits to be exchanged
2219/33109 Select out of plurality of alternative control parameters	2219/33147 Address peripheral, controller 2219/33148 CLS client server architecture, client consumes,
2219/33111 Graphic configuration control, connect	server provides services
pictures, objects to each other 2219/33112 • • • Configuration software for network	2219/33149 Publisher subscriber, publisher, master broadcasts data to slaves, subscriber
2219/33113 Initialise each drive during start, load data to	2219/33151 Distributed client server
drive and image to controller	2219/33152 Server has organisation, tree data to access user data, client sends also both
2219/33114 • • • Configure motion controller to drive any kind of motor type connected	2219/33153 AR application relationship, cooperation
2219/33115 Group functions	through logical links
2219/33116 Configuration of motion control	2219/33154 Data exchange between processors of different
2219/33117 • • • Define function by user programmable basic operations	axis of same or different cnc 2219/33155 Communication between motor current
2219/33118 • • • Identify bus, interface select automatic	controller and position controller
adaption for bus, interface	2219/33156 Communication between two processors over
2219/33119 Servo parameters in memory, configuration of	shared, dualport ram
control parameters 2219/33121 Host loads program from attached module to	2219/33157 Between processor and sensor, encoder 2219/33158 Remote procedure call to each other
control that module	2219/33159 Communication between acyclic and cyclic,
2219/33122 Adapt nc control to type of machine, read	loop programs
machine and measuring parameters 2219/33123 Identify kind of transducer, encoder used	2219/33161 Data exchange between controller and processors
2219/33124 Configuration of different kind of tool	2219/33162 Two bus, high speed and low speed bus, linked
magazines, tool changers and buffers	or not
2219/33125 System configuration, reconfiguration,	2219/33163 Multichannel master bus
customization, automatic 2219/33126 • • • Identification of address connected module,	2219/33164 Bus timing adjustment by buffer with controller 2219/33165 Gpsc gpsl general purpose serial channel, link
processor	2219/33166 Rs485 bus to control several modules, motors
2219/33127 Display each control parameter by name and its	2219/33167 Bus arbitration, switch computer to different
value	memory
2219/33128 Different spindles, axis controlled by	2219/33168 Two bus, master bus and local servo bus
configured paths, channel 2219/33129 Group spindles, axis into motion groups, nc	2219/33169 Name of bus, vme-bus
channel structure	2219/33171 Stdbus 2219/33172 Multibus
2219/33131 Synthesize programmable axis, to simulate a	2219/33173 Bitbus
non existing, virtual axis	2219/33174 Sds smart distributed system, honeywell
2219/33132 Configured function disabled if concerned axis not referenced	2219/33175 Isa bus
2219/33133 For each action define function for	2219/33176 Rs485, mpi multipoint, multidrop interface
compensation, enter parameters	2219/33177 Interface, scsi, parallel
2219/33134 Enter parameters for relationship between axis	2219/33178 Centronics 2219/33179 Pemeia
2219/33135 Data compression before sending data to allow	2219/33181 Isdn
control of more axis, spindles	2219/33182 Uart, serial datatransmission, modem
2219/33136 Com: communication, inter processor communication, either local or network	2219/33183 IEEE-488, hp interface, instrumentation
2219/33137 Time left during polling used for other	2219/33184 Rs232c to rs485 converter
communication, priority for polling	2219/33185 Rs232c switch box, break out box, to connect
	different devices

2219/33186 Circuit for signal adaption, voltage level shift, filter noise	2219/33233 • • • If servo data corrupt, use previous value, no repeat
2219/33187 Serial transmission rs232c, rs422, rs485	2219/33234 Detect bad data transfer
communication link	2219/33235 Redundant communication channels,
2219/33188 Twisted pair	processors and signal processing hardware
2219/33189 Optical, glass fiber	2219/33236 Add check data to message to check faulty
• •	
2219/33191 Data exchange combined with inductively	communication
coupled power supply	2219/33237 Detect short circuit of bus
2219/33192 Radio link, wireless	2219/33238 Switch from differential to single line
2219/33193 Inductive transmission of measured values	communication if short between two wires
2219/33194 Data and power supplied over optical fiber	2219/33239 Switch off, stop, halt transmission on detection
2219/33195 Wave guide, also used as rails for movable	of fault
station	2219/33241 Compare results from two masters on two
2219/33196 Data and power each on a different line to all	busses, if not equal shut down machines
	2219/33242 Watchdog for datacommunication, on error
peripheral, bus	switch off supply to bus modules
2219/33197 Current loop 4-20-mA milliampere	** *
2219/33198 Laser, light link, infrared	2219/33243 Detect quality of received data, message
2219/33199 Transponder	2219/33244 Packet information exchange
2219/33201 Twisted pair combined with optical fiber for	2219/33245 Autosend, send information from cad station
critical emc zones	automatically to peripheral
2219/33202 Single serial line, virtual second line is earth	2219/33246 Timing of transmission data to peripheral
2219/33203 Wireless transmission of power and data,	2219/33247 Synchronize transfer, take over, change of
inductively, rotary transformer	parameters and reference values
2219/33204 Optocoupler, galvanic separation, isolation	2219/33248 Time window for each controller or controlled
	function
2219/33205 Coax or optical fiber or twisted pair	
2219/33206 Ultrasonic	2219/33249 Compress, pack data before transmission
2219/33207 Physical means, radio, infra red, ultrasonic,	2219/33251 Schedule periodic and aperiodic traffic, real
inductive link	time, time critical
2219/33208 Superposition of control signals on supply lines	2219/33252 Real time synchronous transmission, model
2219/33209 Protocol, mailbox, email, mail system	2219/33253 Correction data transmission errors, protection
2219/33211 Polling	against noise, twisted pair
2219/33212 Processor for communication with, evaluation	2219/33254 Serial position feedback, serial to parallel
of signals form detector to pc	conversion and reverse
2219/33213 Communication cpu to synchronize axis	2219/33255 Transfer of data parallel
	2219/33256 Resolver to digital conversion
between different machines	2219/33257 Conversion of designed 3-D tolerance,
2219/33214 Bus between different axis controllers and cpu	allowance to real coordinates of machine
2219/33215 Synchronization pulses on bus for axis	
controllers	2219/33258 Common coordinate conversion for multiple
2219/33216 Operational, real time for system, and service	heads, spindles
for configuration is non real time	2219/33259 Conversion of measuring robot coordinates to
2219/33217 Continuity communication controlled by client	workpiece coordinates
2219/33218 Motor encoders, resolvers on common bus with	2219/33261 Conversion of detected pulses to voltage,
drives, servo controllers	frequency to voltage convertor
2219/33219 Drives, servo units, main control on internal	2219/33262 Current to voltage conversion
net, lan, ethernet, tcp-ip, wireless	2219/33263 Conversion, transformation of coordinates,
2219/33221 Drives, servo units, sensors, motors, on local	cartesian or polar
network, ethernet, tcp-ip, wireless	2219/33264 Conversion of angle between links to linear
	displacement of actuator
2219/33222 High speed serial link combined with medium	2219/33265 • • • Conversion of voltage, resistance to pulses
speed serial link	2219/33266 • • • Pulse to frequency conversion, frequency to
2219/33223 Serial ring, loop pam programmable axis	
manager	pulse
2219/33224 Several serial channels, each provided with d-a	2219/33267 Pneumatic, air to hydraulic conversion
to terminals of servomotor	2219/33268 D-A, A-D
2219/33225 Interface nc machine to data server	2219/33269 Convert cartesian to machine coordinates
2219/33226 Daisy chain	2219/33271 Convert workpiece to machine coordinates
2219/33227 Safety, echo back to verify correctness message	2219/33272 Conversion, transformation of data before and
2219/33228 Detection of line failure, breakage of	after interpolator
	2219/33273 DCS distributed, decentralised controlsystem,
transmission, failure of receiver	multiprocessor
2219/33229 Differential amplifier, xor to cancel noise,	2219/33274 • • • Integrated communication and control,
balanced rs422	
2219/33231 Decoupling, to avoid noise, crosstalk between	transmission delay, sampling rate effect
wires of bus	2219/33275 Distributed, decision made by negotiation
2219/33232 Detect, respond to lost message	among executive components, execute it

2219/33276 Decentralized, each component makes own	2219/33321 Observation learning
decision, executes only own decision	2219/33322 Failure driven learning
2219/33277 Distributed system with host as leader, host	2219/33323 Self diagnostic of boards, own test program
with multiple of agents	2219/33324 • • • What to diagnose, whole system, test, simulate
2219/33278 Cooperation between autonomous modules by	2219/33325 Diagnostic of only machining, operation
receipts, messages, no synchronisation	2219/33326 Analyzer, diagnostic for servovalve
2219/33279 Expansion by using secondary access to each	2219/33327 Self diagnostic of control system, servo system
module, extension module	2219/33328 Diagnostic for bus system of computer
2219/33281 Architecture, nodes for communication and	2219/33329 Measuring system, encoder
measuring on serial bus	2219/33331 • • • Test, diagnostic of field device for correct
2219/33282 Node with communication, transducer,	device, correct parameters
common core, application specific modules	2219/33332 Each processor can execute all programs
2219/33283 Customized nodes for desired functionality	2219/33333 Network multiprocessing
2219/33284 Remote diagnostic	• •
2219/33285 Diagnostic	2219/33334 Load balancing, distribution between
2219/33286 Test, simulation analysator	processors
2219/33287 Program panel to program, enter data for	2219/33335 Microprocessor for max 3-D control otherwise
diagnostic	host takes over for more axis
2219/33288 Switch, select between normal and diagnostic	2219/33336 first dsp calculates commands for each motor,
control program	second dsp regulates position
2219/33289 During diagnostic of servocontroller, motor is	2219/33337 For each axis a processor, microprocessor
isolated	2219/33338 DNC distributed, decentralised nc, concurrent,
	multiprocessing
2219/33291 Logic analyser function of cnc	2219/33339 Controller with lowest operation rate is selected
2219/33292 Storage oscilloscope function of cnc to	as master
diagnose servo drive, axis oscilloscope	2219/33341 Peer to peer, change master if overloaded
2219/33293 For each actuated axis, set a bit in a word in	2219/33342 Master slave, supervisor, front end and slave
memory, state of axis in word	processor, hierarchical structure
2219/33294 Nc in case of propagation error, search	2219/33343 Each slave stores communication program to
previous module, origin of error	be used by master, exchangeability
2219/33295 Fuzzy expert system for diagnostic, monitoring	2219/33344 Each slave has several processors operating in
2219/33296 ANN for diagnostic, monitoring	parallel
2219/33297 Diagnostic, test, debug	2219/33345 Several master modules, connection modules
2219/33298 Remote videoconferencing	and slave modules
2219/33299 Real time, online diagnostic, integrated in	2219/33346 Only memory of master module stores all
normal control system	position programs of slaves
2219/33301 Simulation during machining	2219/33347 Master sends servo address, speed, kind of
2219/33302 Different sets of monitoring parameters for	interpolation to slave
each operation mode	2219/33348 Processor adapts signals to connected display
2219/33303 Expert system for diagnostic, monitoring use of	2219/34 . Director, elements to supervisory
tree and probability	2219/34001 PLL phase locked loop
2219/33304 Display of diagnostic	
2219/33305 Display of relevant errors together with time	2219/34002 Analog multiplexer

2219/34264 Odbc open database connectivity	2219/34311 Energy saving by recuperating braking,
2219/34265 Windows nt, windows-2000	deceleration energy
2219/34266 Windows-95	2219/34312 Power supply for servo delivered by, derived
2219/34267 Windows nt and cooperating real time	from 4-20-mA current loop
extension	2219/34313 Power supply for communication delivered by,
2219/34268 Cnc and pic controlled alternately by same	derived from 4-20-mA current loop 2219/34314 Slow down, limit speed for energy saving
processor, using timer 2219/34269 Programmable computer controller, plc	2219/34315 Power supply turning on or shutting off
implemented with pc	2219/34316 Install nc system, check voltages, power supply
2219/34271 • • • Nc integrated into pic, plc, combination of	with incorporated a-d
commands	2219/34317 Execute same program on different machines
2219/34272 Communication pc and nc, pic over file system	by differently addressing axis
of pc, direct access pc to nc, pic	2219/34318 Verify if workpiece is already machined, by its
2219/34273 Pc and plc and nc integrated, pcnc concept	weight
2219/34274 Connect pc card to industrial bus, with	2219/34319 Sequence as function of nc controlled axis
additional timing and adapting logic	position, axis zone 2210/24221 Detabase for control of a single mechine
	2219/34321 Database for control of a single machine

2219/34322 Intitialize execution program at reference	2219/34361 Mask for interrupts, inhibit during more
position on workpiece	important tasks
2219/34323 Commanding different axis in sequential order as function of direction of movement	2219/34362 Sampling interrupt is product of integer times scheduler interrupt
2219/34324 Switch some axis over to manual control, while other stay automatic	2219/34363 Encoder generates interrupt to synchronize closed loop
2219/34325 Speed up, optimize execution by combining instructions belonging together	2219/34364 Delay interpolation interrupt as function of machining rates and feeds of machine groups
2219/34326 Program controls two operations simultaneously in opposite directions	2219/34365 • • • After interrupt of operation, do other task and go on - resume operation
2219/34327 Modify, adapt system response to signals from process	2219/34366 Interpolation interrupt so as to avoid fractions of command pulses
2219/34328 Cueing commands table	2219/34367 Interrupts, different tasks foreground,
2219/34329 Generate extended plc program during	midground, background
machining, execution of nc program	2219/34368 Priority
2219/34331 First processor filters instructions for indexing only, all other instructions for second controller	2219/34369 Cause of interrupt is sensor and actuator failure 2219/34371 Abrupt change in system dynamics
2219/34332 Program execution as function of direction,	2219/34371 Abrupt change in system dynamics 2219/34372 Inability to process, execute assigned task
forward or backward	within allocated time interval
2219/34333 Multi threading	2219/34373 Actuator overloading
2219/34334 Scalability	2219/34374 False alarm states
2219/34335 First look ahead for acyclic execution, followed	2219/34375 Generate interrupt after a certain number of
by cyclic execution	position, counter pulses
2219/34336 Avoid deadlock, lock-up	2219/34376 Management nc programs, files
2219/34337 Manual to automatic, tracer	2219/34377 Selection out of several databases according to
2219/34338 Execute control tasks, programs as well as user, application programs	workpiece or conditions 2219/34378 Erase plural programs in a single operation
2219/34339 Single step execution of program	2219/34379 Job management
2219/34341 Choose between electronic cam or time-	2219/34381 Multitasking
dependent as function of required machining accuracy	2219/34382 Preemptive multitasking, cpu decides upon priority scheme, which task to start
2219/34342 Matching closest patterns stored in database with actual components	2219/34383 Dynamic preemptive, special event register manages time slices for applications
2219/34343 Generation of electronic cam data from nc	2219/34384 Execute next block after predetermined time
program 2219/34344 Standby commands, let proces wait while	2219/34385 Execute next block if largest axis distance is reached
program controls other process	2219/34386 Advance program without M function
2219/34345 Database for sequential control of several machines by messages	completion signal
2219/34346 User program fetches part of system program	2219/34387 Delay command as function of speed
when flags are set and detected 2219/34347 Execute auxiliary function, tool change, while	2219/34388 Detect correct moment, position, advanced, delayed, then next command
concurrent machining 2219/34348 Coordination of operations, different machines,	2219/34389 After rough plunge grinding, initiate backoff grinding as function of delay wheel position
robots execute different tasks	2219/34391 Synchronize axis movement and tool action, delay action, simulation inertia
2219/34349 Proper allocation of control components to the required task	2219/34392 Stop program on detection of undefined variable, symbol, enter definition, continue
2219/34351 Knowledge acquisition of environment 2219/34352 Explore discrete event properties, reliability,	2219/34393 Stop program if needed workpiece, tool or data
parallelism, availability	lacks, misses 2219/34394 Execute a certain number of program blocks
2219/34353 Independent positioning motor controlled by microprocessor only if event, limit, pulse	and stop 2219/34395 Synchronize between panel and control
passed	2219/34396 Control different groups of functions,
2219/34354 DES discrete event system, deds discrete event	commands simultaneously, synchronized
dynamic system 2219/34355 List of failure events, list of actions, events,	2219/34397 Synchronize manipulators and machine by using a reference clock for all
trigger actions 2219/34356 Compensation variable interrupt execution	2219/34398 Channel stops and waits for marker until other
delay, interrupt jitter	channel puts that marker
2219/34357 Interrupt driven message passing network	2219/34399 Switch between synchronous and asynchronous mode of controllers
2219/34358 Interrupt changed to uninterruptable interrupt	2219/34401 Synchronize position controller drive with
2219/34359 Real time based interrupt to control axis, other function	interpolator

2219/34402 Synchronize programs for machines, processes,	2219/34444 Web control system, with intelligent control
tasks, if one stops other also	components each with web server
2219/34403 RTI real time, kernel, processing	2219/34445 Several power modules for same actuator,
2219/34404 Allocate storage, memory in each processor for	motor
a copy of needed data	2219/34446 No change of operation mode when slave axis
2219/34405 Switch register banks, each storing process states, for quick real time execution	is out of synchronisation 2219/34447 A microprocessor for programming and
2219/34406 Effect of computer, communication delay in	a microprocessor for control execution of
real time control	program
2219/34407 Calculate elapsed time, store in counter, start	2219/34448 Integrated servo control circuit fixed to
task when time elapsed	housing, remote from cpu
2219/34408 Design real time control system	2219/34449 Fault tolerant control, task from one
2219/34409 RNOS real time networked operating system	microprocessor can be done by other
2219/34411 Handling time critical and time non critical	[2219/34451] False alarm states evaluation, threshold to verify correctness alarm
program sequences 2219/34412 Mark some sequences of time non critical	2219/34452 Synchronize control with pulse, if loss, excess,
sequences as locked, non interruptable	error, then stop
2219/34413 Add time stamp to command message	2219/34453 Stop spreading, propagation failure through
2219/34414 Maximize utilisation workstation	system, inhibit drivers defect boards
2219/34415 Execute urgent jobs quickly	2219/34454 Check functioning controller, cpu or program
2219/34416 Examine, analyse sensor data for co-exclusion	2219/34455 Different parameters are evaluated to indicate
sets, memorize, correlate actions	different faults
2219/34417 Multiprocessor scheduling	2219/34456 Authorize control of machine, robot if control panel has been connected
2219/34418 Scheduler for sequential control, task planning,	2219/34457 Emit alarm signal
control sequence 2219/34419 Structure of control system	2219/34458 Inhibit start or related control switches if path
2219/34421 Termination for each device, enables easy	boundary is outside limits
insertion, connection or disconnection	2219/34459 Plausibility check on connection of module,
2219/34422 SBC single board computer	control unit to machine
2219/34423 Optical isolation, galvanic isolation	2219/34461 Inhibit access to area if dangerous, cover taken
2219/34424 Data flow architecture	off
2219/34425 Same microprocessor for programming and for	2219/34462 Interlock, stop motor if microprocessor starts interrupt, because no watchdog pulse from
machine control	microprocessor
2219/34426 Same hardware, servo controller for different control modes	2219/34463 Alarm canceled automatically when program
2219/34427 Diagnostic, monitoring incorporated in	corrected
controller	2219/34464 Adaptive threshold, level for alarm, eliminate
2219/34428 LSI	false alarm
2219/34429 Servo controller near main cpu but remote from	2219/34465 Safety, control of correct operation, abnormal
servomotor, integrated in cnc	states 2219/34466 • • • Bad circuits, watchdog, alarm, indication
2219/34431 Main uninterruptable servo loop processor and	2219/34467 Try again program
interruptable servo event processor	2219/34468 Check memory by storing beforehand
2219/34432 Speed and current control integrated into no control system	complement of expected result
2219/34433 Multitask processor controls real time	2219/34469 Normally messages over network, if failure,
processor via communication memory	messages from operator over I-O
2219/34434 Separate power controller for drive, servodrive,	2219/34471 Program memory is inhibited, not accessible as
one per axis, connected to cnc	long as power fails 2219/34472 Configure alterable memory as read only, to
2219/34435 Position encoder and motor connection in one	avoid erasing
interface between motor and microprocessor	2219/34473 Inhibit control until control lever is first set to
2219/34436 Interface circuit build into connector, dongle	neutral position
2219/34437 Parallel processing of functions, each layer has own sample rate	2219/34474 Sense voltage drop of system, shut down servo
2219/34438 Panel connected to nc by means of switch	2219/34475 Detect abnormality of control system without
matrixes	inverted model, using input command
2219/34439 One cable between controller and amplifier,	2219/34476 Local control predicts next command data from
two between amplifier and motor	past stored data if host control fails 2219/34477 Fault prediction, analyzing signal transfer
2219/34441 Common communication interface for panel	2219/34477 Fault prediction, analyzing signal trends 2219/34478 Urgent safety signals treated with hardware;
and remote I-O	others with software
2219/34442 Control unit serves also to match drive motor to power supply	2219/34479 Flush enclosure of circuit with air, keep clean
2219/34443 Sensors and actuator integrated into tool	air over pressure
The second secon	2219/34481 EFC explosion free control, intrinsically safe

2219/34482 Redundancy, processors watch each other for	2219/35026 Design of machine tool, of cnc machine
correctness	2219/35027 Design of machine tool, of the machine 2219/35027 Design for assembly DFA, ease of object
2219/34483 Monitor absolute position independently by	assembly
two processors, if out of range	2219/35028 Adapt design as function of manufacturing
2219/34484 Use dual channels	merits, features, for manufacturing, DFM
2219/34485 Same functioncode, program is fully used in	2219/35029 Design of modular control system
normal and abnormal case 2210/24486 Monitor axis measurement aread independently	2219/35031 Redesign, use former design
2219/34486 Monitor axis movement, speed, independently by two processors, if out of range	2219/35032 Check correctness, violation of design, rule check
2219/34487 Redundant diagnostic controllers watch	2219/35033 Reliability by design, error free object
redundant process controllers	2219/35034 Adapt design to customer feedback
2219/34488 One computer, controller replaces other,	2219/35035 Design gear, tooth surfaces
backup computer	2219/35036 Correct model by comparing 3-D measured
2219/34489 Watchdog with adaptive timeout as function of	data of modified workpiece with original model
speed of motor	2219/35037 Use medial axis transformation to decompose a
2219/34491 Count certain number of faults before delivering alarm or stop	domain, limits combinations
2219/34492 Time out, decide only after a lapse, period of	2219/35038 Combine, superpose model, foot data with style data
time	2219/35039 Model for analysis of workpiece displacement
2219/34493 Supervision, display diagnostic, use or select	due to clamping, fixture
between different stored screen	2219/35041 Genetic algorithm for selforganizing designs
2219/34494 Display machining time and real time clock to	2219/35042 Add finishing allowances to a cutter path
control machining time	2219/35043 Tool, fixture design
2219/35 . Nc in input of data, input till input file format 2219/35001 Data input, data handling, programming,	2219/35044 Tool, design of tool, mold, die tooling
monitoring of nc	2219/35045 Design tool for minimal tool change
2219/35002 Parametric machine control, direct control from	2219/35046 Design tool to minimize manufacturing,
cad data, no nc data	machining time
2219/35003 Kad kam knowledge aided design, knowledge	2219/35047 Design tools in pairs, to be used together 2219/35048 Recognition of punch shapes provided in die
aided manufacturing	component catalogue

spindle, machine tool and set on spindle	2219/35052 High level language conversion program, DXF format to nc format
2219/35008 Www cad, world wide design and	2219/35053 IGES initial graphics exchange specification
manufacturing	2219/35054 STEP or PDES, standard for exchange of
2219/35009 Dynamic simulation	product data, form or surface data
2219/35011 Use of spreadsheet	2219/35055 Data modeling language
2219/35012 Cad cam	2219/35056 Manual entry of source, destination, data,
2219/35013 Define workpiece, dimension from	format to be used for transfer
characteristics, strength, performance 2219/35014 From design, calculate additional parameters,	2219/35057 Create also operation data concerning operating
for strength	device
2219/35015 Calculate production compensation, heat	2219/35058 Block cyclus time, time to prepare a block of data to be sent to machine
shrinkage, overetching	2219/35059 Convert pcb design data to control data for
2219/35016 Analyse model, decide on number of sections	surface mounting machine
to take	2219/35061 From cad make drawing with text for
2219/35017 Finite elements analysis, finite elements	dimensions, scan it and read dimensions
method FEM 2219/35018 Determining bending die radius from part data,	2219/35062 Derive mating, complementary, mirror part
estimated radius and calculation	from computer model data
2219/35019 From product constraints select optimum	2219/35063 Geometrical transformation of image
process out of plurality of DTM means	[2219/35064] Transform sketch by replacing free curves with mathematical curves, two display
2219/35021 Identify object characteristics, elasticity,	2219/35065 Undo part of design
density, hardness and select material	2219/35066 Modify design, modify shape, stretch, scale,
2219/35022 Calculate gear dimensions, tooth surfaces for	add, delete
optimum contact Constraint based modeling, keep relationships	2219/35067 Parametric function, group of lines, curves,
2219/35023 Constraint based modeling, keep relationships between elements	change one, all change
2219/35024 Incremental constraint solving, constraints are	2219/35068 Command files, subroutines for drawing
handled in sequence	[2219/35069] Derive missing surface from mirror part of computer model
2219/35025 Design and manufacture jig	computer moder

2219/35071 Drawing function, rotate designed figure, rotation	2219/35112 Define object with spline, convert to raster, mosaic of points to make object
2219/35072 Scale, zoom a designed figure	2219/35113 Generation of compound, composite surface
2219/35073 Copy, duplicate a designed figure	2219/35114 Generation of connection between two or more
2219/35074 Display object, recognition of geometric forms	surfaces
2219/35075 Display picture of scanned object together with	2219/35115 Project 3-D surface on 2-D plane, define grid in
picture of cad object, combine	plane
2219/35076 Display from bottom or top side, adjust drawing lines, visible or not	2219/35116 RFS rotation free surfaces, needs c x y z axis, non axis symmetrical surfaces
2219/35077 Display part and patterns to be machined on	2219/35117 Define surface by elements, meshes
part, make selection	2219/35118 Generate intersection of offset surfaces
2219/35078 Do not load non necessary or obstructive parts	2219/35119 Combine different forms, shapes
of drawing, remove from screen	2219/35121 Generate connection between two paths
2219/35079 • • • Features, functions like special relationdship,	2219/35122 Generate random paths along a raster path
assembly locations	2219/35123 Calculate volume of object
2219/35081 Product design and process machining planning	2219/35124 Calculate center of gravity of object
concurrently, machining as function of design	2219/35125 Surface with changing cone angle, different
2219/35082 Product, feature based modeling, geometric and	upper and lower surface shape
engineering info	2219/35126 Bezier or Ferguson surface
2219/35083 Parametric design, parameters for geometric	2219/35127 Visibility maps, tool sees all points of interest
design and for process planning	on workpiece
2219/35084 Geometric feature extraction, concave and	2219/35128 Propeller blade
convex regions, object recognition	2219/35129 Generate composite surface by a single
2219/35085 Incremental feature recognition, extraction,	polynomial calculation
changes are added as new features	2219/35131 Generate polynomial surface
2219/35086 Machining feature extraction, geometry and	
machining parameters	2219/35132 Generate path as function of precision and surface finish of each portion
2219/35087 Hole extraction for sheet metal	
2219/35088 Using graph grammars to describe parts	2219/35133 B-spline surface fitting 2219/35134 3-D cad-cam
2219/35089 Feature definition language	
2219/35091 • • • Feature conversion, from design to process	2219/35135 Predict surface machining precision
features or else	2219/35136 Determine offset using closed ball expansion,
2219/35092 MBM modular boundary model, FFC face to face composition model	2-D square, 3-D cubic approximation 2219/35137 Create part generic, derive from known part or
2219/35093 Feature is stad single tool approach direction,	combination of parts
or mtad multiple tool approach	2219/35138 Superpose part of 3-D model on a straight, curved wall
2219/35094 Object oriented feature finder	2219/35139 Define surface by cyclides, circular sections
2219/35095 Features library	with variable radius
2219/35096 Kind of feature, rotational parts with machining features and relation	2219/35141 Specify side of zone, line, circle for allowed region
2219/35097 Generation of cutter path, offset curve	2219/35142 Generate tile patterns, mosaic
2219/35098 Automatic coarse, rough and finish cutting path	2219/35143 Reconstruct free form surfaces
generation	2219/35144 Egosphere: spherical shell 2-5-D around robot,
2219/35099 Generation of cutter path for only a designated	objects are projected on it
part of surface	2219/35145 Voxel map, 3-D grid map
2219/35101 CC cutter contact path	2219/35146 Enter data, calculate 3-D curve or surface,
2219/35102 Isoparametric, contact points at intersection of	sculptured surface, okisurf
parameter lines on surface	2219/35147 Generation of nice looking composite surface
2219/35103 Cl cartesian method, apt style, cutter tangent,	2219/35148 Geometric modeling for swept volume of
parallel to drive planes	moving solids
2219/35104 Steepest directed tree approach intelligent	2219/35149 Generate model with haptic interface, virtual
cutter path planning	sculpting
2219/35105 Polyhedral machining, cutter moved between centroids of adjacent surface triangles	2219/35151 Modeling geometric, generation or forming of curved surface
2219/35106 Contour map, cutter moved along contour lines,	2219/35152 Part coding, description from 3-D cad database
terraces of part surface	2219/35153 Group and retrieve similar designs from cad
2219/35107 Generate planar section toolpath	data
2219/35108 Generate offset tool moving path in restrained	2219/35154 Convert 2-D workpiece in rectilinear polygon,
curved plane	simplified skeleton
2219/35109 Clean up region, volume left uncut by too large	2219/35155 From parts catalog, database, define part
tool pass after finishing	relationships, product definitions, specifications
2219/35111 Automatically search for clean up regions,	2219/35156 Group technology, identify and group simular
generate clean up tool pass	parts, tools and machines

dimension of part	program
2219/35179 Tolerance constraints as function of process	2219/35221 Generate cutter path as function of speed,
capability and manufacturing costs	acceleration condition selected by operator
[2219/35181] Machining condition constraints, coolant, chip removal, previous forming	2219/35222 • • • From cad derive data points for endball mill, grinder, then radius compensation
2219/35182 Scallop hull generation and its offset,	2219/35223 • • • Tolerance, consider tolerance in design, design
interference free offset	for assembly
2219/35183 Maximizing side step, constant CUSP, scallop	2219/35224 Kinematic tolerance analysis, variation in
height, smaller CL datafile for minimizing	kinematic function as function of tolerance
machining time	2219/35225 Tolerance in setup planning
2219/35184 Variable step over, from toolpath to toolpath	2219/35226 Analysis of tolerance propagation
2219/35185 Select optimum tool radius 2219/35186 Variable step forward on same toolpath	2219/35227 Use FMEA failure modes and effects analysis in tolerance assignment design
2219/35187 Surface ridges, cusps, scallops, distance of tool	2219/35228 Automated tolerance chain generation
traverses as function of curvature	2219/35229 Code
2219/35188 Project workpiece and sheet on screen, position	2219/35231 Biquinary code, 2-of-7 symbols
layout to be cut, store contour	2219/35232 Bcd
2219/35189 Manufacturing function, derive gripper position	2219/35233 Octal
on workpiece from cad data	2219/35234 First column has 1-2-4, second column has
2219/35191 Project workpiece and gripper, control relative movement, store result	8-16-32
2219/35192 From design derive sequence of bending so that	2219/35235 Decimal to binary
bending is possible	2219/35236 Excess-code 2219/35237 Under four is 0xxx, over four is 1xxx
2219/35193 Manufacturability	2219/35238 Gray-code
2219/35194 From workpiece data derive tool data	2219/35239 Ternary code
2219/35195 Design mosaic, cut tiles, paint tiles and pack	2219/35241 End, stop code of program
mosaic	2219/35242 To enable manual operation on detection of
2219/35196 From workpiece data derive assembly tool data 2219/35197 Assemblability	inserted code
2217/33177 Assemulating	

2010/07040	2010/05005 PI 1171 I I C I I I I I I I I I I I I I I I I
2219/35243 Inserted code calls parallel execution of another program, synchronize	2219/35285 Plausibility check for data, within permissible range
2219/35244 Select in corner different program according to inner, outer machining	2219/35286 Run tape without machining, tape proving, dry run, test run
2219/35245 Expansion of control words, code of standard language to increase functionality	2219/35287 Verify, check program by drawing, display part, testpiece
2219/35246 Data handling for auxilliary functions as function of setting of switch, block delete	2219/35288 Verification of instructions on tape, direct or by comparing with reference
2219/35247 Mode selection between two machining modes, laser beam and laser shutter control	2219/35289 Display machining state and corresponding control program
2219/35248 Pallet exchange code to get mating nc program	2219/35291 Record history, log, journal, audit of machine
2219/35249 In corner change cutting command to piercing	operation
command, to keep angle point intact	2219/35292 By making, plotting a drawing
2219/35251 Several M codes sent to several machines simultaneously	2219/35293 Execute program and check block of data, on interrupt display block
2219/35252 Function, machine codes G, M	2219/35294 Display concentric circles
2219/35253 To stop program until a cycle start key is	2219/35295 Stop test run, correct instruction or block,
pressed	restart test run
2219/35254 GPF, G preparatory functions, G111 indicate switch to polar, absolute to reference	2219/35296 Inhibit operation if part shape not compatible with raw material shape
2219/35255 G112 switch to polar, relative to last polar	2219/35297 Convert program to voice output to check
coordinate	program
2219/35256 Assign a macro to a key	2219/35298 Print screen display
2219/35257 Macro, assign a name to macro	2219/35299 Verify if generalised data block has all words
2219/35258 A named macro can be called from a program,	required
a key, a menu	2219/35301 On error, push button to reverse execution
2219/35259 Divide program in machining division blocks,	mode of block, stop, correct
and name them	2219/35302 Set and store command code together with display colour, detected on execution
2219/35261 Use of mathematical expression, functional	2219/35303 Dry run, compare simulated output with desired
equation 2219/35262 Macro instruction, canned cycles, subroutines,	finished profile, alarm, inhibit
subprogram	2219/35304 Real time analysis, check of program, just
2219/35263 Using variables, parameters in program, macro,	before machining
parametrized instruction	2219/35305 Before machining, verify if all different
2219/35264 Reread same data	machining start points are correct
2219/35265 Check time differences of command signals	2219/35306 Interference of all tools of turret, or part of tool
2219/35266 On error display code, message for recovery	base with chuck, workpiece
from fault	2219/35307 Print out of program on paper, on screen
2219/35267 Compare ram data to rom data, verify	2219/35308 Update simulator with actual machine, control
correctness, validity data, tolerance	parameters before start simulation 2219/35309 Actual execution times acquired during
2219/35268 Detection of presence of rom cassette or similar, if coupled to internal memory	machining used in simulation
2219/35269 Checking data, parity, diagnostic	2219/35311 Remote simulation of machining program
2219/35271 Checking electronics	2219/35312 Display working state, process
2219/35272 Watchdog, count or integrate number of data	2219/35313 Display, validate tool path for boundary,
errors before alarm	surface interference
2219/35273 Sensor to detect functioning of signal conditioning elements	2219/35314 Display workpiece and machine, chuck, jig, clamp, tool
2219/35274 Parity	2219/35315 Projection, two, three section views
2219/35275 Excess in error	2219/35316 Interference checking between tool, machine,
2219/35276 Two identical tapes	part, chuck, machining range
2219/35277 Double reader	2219/35317 Display tool shape, to select tool for program,
2219/35277 Checksum CRC	or for interference
2219/35279 Ignoring invalid program	2219/35318 3-D display of workpiece, workspace, tool
2219/35281 Detect overlap of program, if new data is	track
entered before old is handled, stop	2219/35319 Show alternatively static and dynamic locus, during static update of dynamic
2219/35282 Verify if loaded program into memory or stored	2219/35321 Display only tool locus, dynamic
into tape, cassette is correct	2219/35322 Display only tool locus, dynamic 2219/35322 Display dynamic tool locus from entered start
2219/35283 Plausibility check for function, program, inhibit	point to present position
dangerous, unallowed program 2219/35284 Programmed speed automatically limited to	2219/35323 Point to two points on tool locus, calculate and
min and max transmission range speed	display value
and man damping opera	2219/35324 Two, more pictures separated on screen,
	display

2219/35325 Display of locus with possible correction of machining	2219/35364 Merge normal nc program with manual entered monitoring, diagnostic criteria
2219/35326 Scale image automatically to display whole tool locus or indicated area	2219/35365 Configure buffer dynamically, store two 3-D blocks or one 6-D block
2219/35327 Display tool locus together with correlated machining parameter, load motor	2219/35366 Fill buffer dynamically, track read out and write in addresses, fifo
2219/35328 Shift view as function of shift of tool with respect to workpiece	2219/35367 Only read buffer, advance tape while machining with data from read buffer
2219/35329 Display entire image within an enlarged image 2219/35331 Display only machined part	2219/35368 Read and work buffer, machine while read in, no switching between buffers
2219/35332 Use solid and wire frame plotting to display tool locus, workpiece	2219/35369 Read and work buffer, machine while read in, buffers switched alternative
2219/35333 Display raw material, blank, tool locus, workpiece, alarm if error	2219/35371 Data from read instead of work buffer, load data directly to work buffer
2219/35334 Display entire part and zoom of detail	2219/35372 • • • Store variable block, word length into memory
2219/35335 Update display image only if tool advanced	2219/35373 Data storage, buffer
over a defined distance	2219/35374 First memory for independent axis, second
2219/35336 Display locus and corresponding actual block	memory for synchronized axis
2219/35337 Program has instruction to display specific information	2219/35375 Store command data into latch, buffer synchronized to clock
2219/35338 Display virtual tool, locus, part to check possibility of execution next block	2219/35376 Input program, analyze, store to buffer ready to control nc, no further data handling
2219/35339 A mark for present position of tool, a mark for	2219/35377 Check for end of block
end point of block, colour	2219/35378 Detect if reference data is not changing
2219/35341 Display finishing, finishing margin, work, tool	anymore to decide a still stand, stop
and chuck shape, different colours 2219/35342 Set colour change for a block, display locus for	2219/35379 Conversion, normalize 2219/35381 Convert in real time input peripheral data to
that block in different colour	processor data, ouput data format
2219/35343 Display path and coating thickness and painting	2219/35382 Distribution
time	2219/35383 Input serial or parallel
2219/35344 Display part, programmed locus and not yet machined, uncompleted portions of part	2219/35384 Serial data handling
2219/35345 Display entry of high level program together	2219/35385 Decode several blocks at the same time, as a single block, simultaneous, parallel
with corresponding no program	2219/35386 Look ahead processing of plural block data
2219/35346 VMMC: virtual machining measuring cell	from buffer
simulate machining process with modeled	2219/35387 Transfer measured data first to fastest
errors, error prediction	controller, processor then to slower
2219/35347 Replace tool by light emitter, operator checks	2219/35388 Processors in parallel, second, third handle rest
light path on workpiece 2219/35348 Different colour, texture as function of	old block while first starts new block
distance, direction between tool and workpiece	2219/35389 Different block length to select between panel and remote I-O
2219/35349 Display part, programmed locus and tool path,	2219/35391 Sort, order entered data hierarchical
traject, dynamic locus	2219/35392 Set switches, load, cancel data for different
2219/35351 While machining probe model, sense drawing	axis, spindles simultaneous
by same program, stop if deviation	2219/35393 Coordinate selection switch
2219/35352 By making a testpiece	2219/35394 A separate processor for block, span
2219/35353 While machining compare real path with	2219/35395 Memory, ram table with waveform, no need to
simulated, command path, contour display	be loaded by nc program, quicker
2219/35354 Polar coordinates, turntable	2219/35396 Table of contour for cyclic machining, only
2219/35355 Generate at jump a fictive instruction equal to	data for one cycle, derive other
sum of previous instructions	2219/35397 Cross bar switch
2219/35356 Data handling	2219/35398 Machining, change parameters as function of
2219/35357 Setup data, includes scale, range, type, selected together with part program	machining type
2219/35358 If a pattern contains another pattern, separate	2219/35399 Split part program in elementary machining steps, executable by a single tool
date to avoid overlap	2219/35401 Tool edge, tool shape, dead corner because of
2219/35359 Discriminate between setup data and machining data	tool shape
2219/35361 Discriminate between data for servocontrol	2219/35402 Calculate allowable machining capability from cutting conditions
directly and nc processing data	2219/35403 Calculate midline of tapelike contour, as
2219/35362 Group similar operations, to select correction,	reference line for stitching
compensation values	2219/35404 Divide scanned pattern in several closed area,
2219/35363 Generate data on component arrangement	store as intermediate data

2219/35405 Prepare seam data for each pattern size as	2219/35446 Earprotection, earphone
function of scale and intermediate data	2219/35447 Potentiometer
2219/35406 Decompose axis movement, group	2219/35448 Datasuit, arm sleeve, actor, operator wears
components, interpolate separately, superpose	datasuit and generates motion
pulses	2219/35449 Joystick and buttons for menu and function
2219/35407 Position data, calculate data to project	selection, scrolling, +sign and -sign
characters along curve	2219/35451 • • • Mouse with additional wheel, switches for
2219/35408 Calculate new position data from actual data to	position control
compensate for contour error	•
2219/35409 DPC direct programming at the console	2219/35452 Two axis foot pedal
2219/35411 Clamp detachable teaching box magnetically	2219/35453 Voice announcement, oral, speech input
on housing	2219/35454 Switch between joystick and pedal control
2219/35412 Special interface for manual input to pc	2219/35455 Foot pedal
2219/35413 Manual device is automatically recognised and	2219/35456 Disk segments connected to different inputs of
its interface selected	microprocessor, represent different positions
2219/35414 Remote instruction to operate machine tool	2219/35457 Joystick for coarse, rotary encoder for fine
	movement
2219/35415 3-D three dimension, space input, spaceball	2219/35458 Control command embedded in video, audio
2219/35416 3-D joystick	stream, signal
2219/35417 Handle, joystick connected to n+1 wires for n	2219/35459 Knob, handle, handwheel delivers pulses,
degrees of freedom	electronic handwheel, digipot
2219/35418 Bird, free flying hand controller, receives	2219/35461 Digitizing, menu tablet, pencil
signals from transmittors in space	2219/35462 Mouse
2219/35419 Four and more-DOF hand controller, joystick,	2219/35463 Trackball
manipulandum	2219/35464 Glove, movement of fingers
2219/35421 3-D matrix to input a 3-D surface, position	2219/35465 Hand wheel
displaced elements read by computer	2219/35466 Select with mouse button coarse or fine
2219/35422 Unit freely movable in space, detect its	movement control
position, orientation by triangulation	2219/35467 Select between control modes, jog, freeform,
2219/35423 6-DOF force reflective hand controller frhc	grid, corner, locate, contour, slot
2219/35424 16-DOF glove attached to 6-DOF hand	2219/35468 Select between teaching, regulate position and
controller, superposition	direct control of position
2219/35425 18-DOF glove with fifteen load detectors on	2219/35469 Select with button specified picture, interrupt
each finger, eighty one in total	addresses selection table
2219/35426 Prepare, enter next program during execution	2219/35471 Select between run and step command mode,
of actual program, machining	step forward, reverse
2219/35427 User controls machine with eye motion,	2219/35472 Mode selection
activates icons on display	2219/35473 • • • Input limit values of speed, position,
2219/35428 Block selection, search	acceleration or force
2219/35429 Enter code number directly for function, no use	2219/35474 Enter fuzzy command, instruction, like move
of function keys	closer
2219/35431 Interactive	2219/35475 • • • Set tolerance values
2219/35432 Format guide to guide user during input of data	2219/35476 Switch from auto to manual if operator moves
2219/35433 During execution, display asks for parameters,	feedback detector, to set parameter
operator answers, machine again	2219/35477 Accelerate input data, exponent as function of
2219/35434 Enter part geometry and manually control path	pressure, time, turning speed
free, directly, real time, cutting	2219/35478 Set flexibility of axis in working coordinates, to
2219/35435 Display, if needed, tolerance memo data at	move real axis manually easily
place where real data must be input	2219/35479 Set values, speed of machine as function of
2219/35436 Means, manual input, input reference, hand	
wheel	force, pressure, duration on key
2219/35437 Decimal	2219/35481 Display, panel
2219/35438 Joystick	2219/35482 Eyephone, head-mounted 2-D or 3-D display,
2219/35439 Keys or buttons	also voice and other control
2219/35441 Production design metaphore, tool, operation	2219/35483 Synoptic display for work shape during
like input system	machining
- ·	2219/35484 Use two image memories, update second
2219/35442 Hand wheel turns resolver to control movement slide	memory while display first memory
2219/35443 Portable drill, screw driver to set position of	2219/35485 Library of images, pictures, select and modify
axis instead of handwheel	each, compose them
2219/35444 Gesture interface, controlled machine observes	2219/35486 Use of two cursors on screen
operator, executes commands	2219/35487 Display and voice output incorporated in safety
2219/35445 Joystick for coarse and handwheel for fine	helmet of operator
movement	2219/35488 Graphical user interface, labview
movement	

2219/35489 Discriminate, different colour, highlight between two states	2219/35532 Comment, work directive, message to operator and control signals together
2219/35491 Workpiece date display, position, height	2219/35533 Use, input 2-D data, sectional profile to
2219/35492 Display needed workpiece, tool or data to	machine 3-D surface
continue execution of program	2219/35534 Conversion input data
2219/35493 Display workpiece and tool data together	2219/35535 Decimal to binary
2219/35494 Online documentation, manual, procedures,	2219/35536 Digital to analog
operator, user guidance, assistance	2219/35537 Bcd to phase
2219/35495 Messages to operator in multimedia, voice and	2219/35538 Bcd to decimal
image and text	2219/35539 Gray to frequency
2219/35496 Display cursor in changing colour to indicate	2219/35541 Bcd to 5-2-1-1-code
that object can be selected	2219/35542 Bcd to binary
2219/35497 Use colour tone, hue to indicate amount of	2219/35543 Cartesian to polar and vice versa
processed quantity	2219/35544 Convert male to female form, die to stamp form
2219/35498 Synoptic display of available, selectable control	2219/35545 Serial to parallel conversion
modules with their functions	2219/35546 Convert input data to execution data
2219/35499 Model of process, machine and parameters	2219/35547 1-to-8-bit conversion
2219/35501 Colour display	2219/35548 1-to-16-bit conversion
2219/35502 Display picture, image of place of error	2219/35549 Convert buffer content to executable data in
2219/35503 Eye tracking associated with head mounted	case of short execution time
display to detect eye position	2219/35551 Convert and select between EIA and ISO code
2219/35504 Multilingual communication, messages in different languages	2219/35552 ISO and EIA code detected by difference of
2219/35505 Display two windows, one with nc-data, other	parity bit
with general application data	2219/35553 Convert ISO or EIA code to internal or
2219/35506 Camera images overlayed with graphics, model	standard code
2219/35507 Spider, radar, parallel axes, multivariate plot	2219/35554 Mirror, other conversions
2219/35508 Operator chooses among different GUI formats	2219/35555 Turn figure over 90-degrees or 180-degrees,
2219/35509 Double large character on screen	convert data for new state
2219/35511 Cursor on screen	2219/35556 Conversion inch to metric
2219/35512 Display entered, measured values with	2219/35557 Workpiece related data to axis related data
bargraph	2219/35558 Convert speed value into two signals sin, cos
2219/35513 Setting tool condition, tool set in tool	representing position
exchanger, present or not	2219/35559 Convert 15-bit image into 20-bit image
2219/35514 Display tool data	2219/35561 Analog to digital
2219/35515 Workpiece set condition, workpiece present or	2219/35562 Radius to diameter 2219/35563 Use of conversion tables
not	2219/35564 High speed data processor between host and no
2219/35516 Three linear movements in a single plane for three actuators	for direct conversion of data
2219/35517 Use same data, program for workpieces with	2219/35565 Communications adapter converts program to
different length, but same profile	machine or controls directly machine
2219/35518 Superposition data, three memories for 2-D	2219/35566 Use of only delta x values, no absolute values
projection and z profile and surface structure	2219/35567 Each block contains connection, index to other
2219/35519 Machining data and tool data	blocks, to form patterns 2219/35568 Array structure corresponding to display format
2219/35521 Machining and parts on workpiece arrangment	
data, machine each, then cut out	2219/35569 Single block format indicates change of speed at start and end
2219/35522 Database for standard machining data and for	2219/35571 Table with constant speed and corresponding
personal machining data	distance for each segment
2219/35523 Data one bit better than measurement, rest	2219/35572 Data contains header and type of data
accumulated in memory	2219/35573 Header has code to select proper load program
2219/35524 Approach data and machining data	2219/35574 Header with information for display position
2219/35525 Use same data for different operations, coarse	2219/35575 Part program contains movement and condition
and fine, cutting and grinding	statements
2219/35526 Number of workpieces to be machined, cut	2219/35576 Data divided in blocks to be covered by small
2219/35527 Range of number of workpieces to be	movement, to origin by large movement
machined, cut 2219/35528 Create machining conditions database by	2219/35577 Delta x, delta v and delta t
analyzing actual machining nc program	2219/35578 Gerber, hp format to drive plotter or similar xy
2219/35529 Monitoring current machining, store	device
information in database as a new working case	2219/35579 Store motion parameters as function of encoder
2219/35531 Operator inputs manually evaluation of current	position
machining	2219/35581 Position data for module and position data within module
	2219/35582 Control format in browser, use of xtml and xslt

2219/35583 Difference between signals and sign of	2219/36036 Motion, graphical motion control language
difference are the controlling signals	gmcl
2219/35584 Link geometry, workpiece data with machining data, select region	2219/36037 Application programming interface associates component code with driver function
2219/35585 Motion command profile	2219/36038 Ladder program for plc, using functions and
2219/35586 Position, time and slope, tangent of curve	motion data
2219/35587 Store curves with packed code, indicating	2219/36039 Learning task dynamics, process
bezier curve parameters	2219/36041 Edit program step by step
2219/35588 Pack, compress data efficiently in memory	2219/36042 Point to defect, faulty instruction or locus, call
2219/36 Nc in input of data, input key till input tape	up corresponding command block
2219/36001 File format, initial graphics exchange	2219/36043 Correction or modification of program
specification, iges standard	2219/36044 Program modified after breakage, crash,
2219/36002 Dimensional measurement interface specification dmis standard	jamming 2219/36045 Skip of program blocks, jump over certain
2219/36003 Start key, switch to start performing program	blocks
2219/36004 Program mask depends on physical position of	2219/36046 Adapt, modify program as function of
panel	configuration of machine
2219/36005 Same knob, different functions, turn for	2219/36047 Edit program, change or not header, starting
position, push and turn for speed	code, output new program with header
2219/36006 A key delivers a series of key codes	2219/36048 Verify, probe workpiece, if position deviation
2219/36007 Special keys, automatic switch over x or y to	edit, modify program
numerical values	2219/36049 Relational geometry, change one element, rest
2219/36008 Illuminated, lighting up keys, build in led,	of part is adjusted according
display, show sequence data entry	2219/36051 Store history of modified file, back-up, update,
2219/36009 Keys with variable control code, multifunction	using different file extensions
keys	2219/36052 Tape tuning with expert system, correction of
2219/36011 Page key, go to next or previous page	tape as function of measured parameters
2219/36012 Percentage keys, input percentage values	2219/36053 Adapt, modify program in real time as function of workpiece configuration
2219/36013 Up-down keys for calling sequentially	2219/36054 Modify offset for whole sections collectively,
functions, parameters 2219/36014 Overlay to indicate function of key	different offsets for sections
2219/36015 Display areas, fields on screen correspond to	2219/36055 Separate, temporary memory or special storage
position of keys on panel, matrix	region for corrections only
2219/36016 Unified language for machines and translation	2219/36056 Modify program, machining order in real time,
to each	during operation, dynamically
2219/36017 Graphic assisted robot programming, display	2219/36057 Select center of pattern for placement of new
projection of surface	scaled pattern
2219/36018 Language for dimensional measuring,	2219/36058 Modify workpiece part program without changing approach program
inspection	2219/36059 Modify approach program as function of
2219/36019 Using interpreted descriptive commands giving G-codes	changed part program
2219/36021 Switch high level and assembly, machinine	2219/36061 • • • Storage, memory area to store history data for
language as function of capacity memory and	previous corrections, editable
speed	2219/36062 Verify if editing, modifying program is suitable
2219/36022 Switch between machining language for	for connected controller
execution and high level for editing	2219/36063 During machining, compare simulated with
2219/36023 Attribute programming	detected profile, correct, modify program
2219/36024 State language	2219/36064 Modify data by using the four rules of
2219/36025 Link, connect icons together to form program	arithmetic such as +sign, -sign, xsign, :sign
2219/36026 Combine general high level language and	2219/36065 Modify data by entering a compensation rate value
specialised plc language	2219/36066 Collectively modify data instead of each in
2219/36027 Decompiler, translate machine code to hll,	particular
reverse processing, easy modification	2219/36067 Altering working order of program blocks
2219/36028 C++ 2219/36029 Basic	2219/36068 Change program at allowed point of time or
2219/36031 Programming in assembler, machine or high	program step
level language	2219/36069 Display, on machining error, display error
2219/36032 Script, interpreted language	message and correct program
2219/36033 High level graphics language, gks	2219/36071 Simulate on screen, if operation value out of
2219/36034 APT	limits, edit program
2219/36035 Special language, task programming, oop	2219/36072 Select pattern, input modification of tolerance
object oriented programming	2219/36073 Display original and modified part in different colour, highlight, shading, filling
	colour, inginight, shading, filling

2219/36074 Display part, select, mark element and edit	2219/36118 Adapt interactive dialog, help to experience,
corresponding block	short cut menu
2219/36075 Set certain command codes, discriminate codes and display in different colour	2219/36119 Mouse with buttons to assist operator with selection of menu instead of pointing
2219/36076 Select icon and display corresponding instructions	2219/36121 Tree oriented menu, go to root, scroll up down, select mode
2219/36077 Display and select, modify shape, pattern on	2219/36122 Operator menu with submenu for each item
screen	2219/36123 • • • Store statistical history of selected menus,
2219/36078 Insert, read in new command instruction to modify fixed program	recall for quick data entry 2219/36124 Screen with certain display menu called by
2219/36079 Replace faulty instructions and execute only that portion of the program	pointer, number 2219/36125 Select out of library, beforehand only functions
2219/36081 Merge, mix original program with teached	needed for part program
program 2219/36082 Delete a block by overwriting block with delete	2219/36126 Programmable, configurable function keys, execute a programmed sequence
control character	2219/36127 • • • Menu, help menu for operator, messages
2219/36083 Insert a block by using insert control character pointing to address in memory	2219/36128 Function menu, switches, keys replaced by menu
2219/36084 Amend, modify program by inserting wait and	2219/36129 Menu keys, function of keys soft defined
wait dismiss command	2219/36131 Cyclic selection of functions or values by
2219/36085 Replace faulty instructions from rom, tape by	pushing a single key
instructions from ram, error setting 2219/36086 Select, modify machining, cutting conditions	2219/36132 Selection of menu with lightpen on screen,
2219/36087 Edit, modify program for position errors,	display
moving path, use conversion matrix	2219/36133 MMI, HMI: man machine interface, communication
2219/36088 Machining parameters, overide	2219/36134 Osf-motif standard
2219/36089 Machining parameters, modification during	2219/36135 Link between sequence, motion or process and
operation	diagnostic control
2219/36091 Modification, override as function of conditions, distance	2219/36136 User configurable graphics selected as function of kind of machining, display builder
2219/36092 Override limit contour	2219/36137 Configuration of display device, operator panel
2219/36093 Lookup table with override for each pattern, tool path	2219/36138 Configuration of operator panel, using os-2 modular programs, masks
2219/36094 Inhibit or permit override by separate manual switch	2219/36139 Edit templates for screen display, and use of keyboard
2219/36095 Inhibit or permit override by program	2219/36141 Configuration with visual basic extension
instruction	2219/36142 Using window display, selection of function
2219/36096 Override program by selecting another font, size for letters	calls in a window
2219/36097 Override program to scale workpiece	2219/36143 Use of icon to represent a function, part of program
2219/36098 Overide program to execute a certain number of same blocks, repeat pattern	2219/36144 Display of not allowed function in a different way, light
2219/36099 Stop machine and correct position manually	2219/36145 In case of alarm a window is maximised
2219/36101 During machining keep overide log, history,	automatically
journal, kind of record playback 2219/36102 Display overide log and nc instructions, select	2219/36146 Group windows into coherent sets to facilate a task
nc block to modify permenant	2219/36147 Limit number of windows displayed
2219/36103 Adapt, update machining parameters	simultaneously
automatically as function of state of processing	2219/36148 Main process, alarm window takes priority,
2219/36104 IC card	always on top, safe view
2219/36105 Cd rom	2219/36149 Window, X window
2219/36106 Cassette	2219/36151 Display is a TV
2219/36107 Bubble memory	2219/36152 Panel
2219/36108 Eprom, earom, eerom	2219/36153 Two, several consoles, displays, panels, two
2219/36109 Flash memory	different input, joystick
2219/36111 Local memory instead of tape, or combined	2219/36154 Two displays, for part shape and for
2219/36112 Floppy disk, diskette	corresponding instructions, block
2219/36113 Rom	2219/36155 Plc switches functions of panel when changing
2219/36114 Eprom, prom	kind of machining
2219/36115 Card	2219/36156 Keyboard as a drawer
2219/36116 Harddisk	2219/36157 Pendant control box for handwheel control,
2219/36117 Magnetic tape cassette	mounted on controlled axis
	2219/36158 Panel for disabled, scanned sequentially

	achable or portable programming unit, play, pc, pda	2219/36209	• Specify hole shape pattern for boring and store in hole file
	nmon program panel for nc, pic, switch play diagnostic or part	2219/36211	• Using different cutter sizes, largest as possible for minimizing machining time
2219/36162 Pen	dant control box	2219/36212	 Using generic virtual pocket, having virtual
2219/36163 Loc	cal as well as remote control panel		boundary, arbitrarily shaped
2219/36164 Con	mmon CRT for two input devices	2219/36213	• Grouping of decomposed volumes with similar
2219/36165 Con	nmon program panel for host and cnc, at		features
	place, for data from host, cnc eral panels can be selected by rotation,	2219/36214	 Pocket machining, area clearance, contained cutting, axis milling
limi		2219/36215	 Insert automatically program sequence, for corner execution, avoid machining error
head	d mounted display	2219/36216	• Replace entered position data with previous if
2219/36168 Tou			difference less than tolerance
	, , - _F		Commands trigger programming functions
_	, ,	2219/36218	Reuse stored data as programming data after
	t velocity, motion profile, graphic plot of		confirmation
•	, I	2219/36219	• Calculate machining information, like time,
	ect block, item, highlight, colour this block	2210/26221	surface to be machined from program
	1	2219/36221	• Entry of chamfer, beveling, rounding of corner
	mbine record play back, hand wheel with	2210/26222	shape
	1 6	2219/36222	• Indicate entered element on top, next element below, after input, update top
	gram divided into modules	2210/26222	Enter machining conditions, determine
	ture image of part, ereate automatically	2219/30223	automatically machining data
	metry, sequence of machining	2210/36224	• Enter machining and positioning elements,
	e serve control parameters	2219/30224 • •	derive order of execution in real time
	ect block and display graphic representation	2210/36225	Select and insert program from library, select
		2217/30223 • •	case, variant
	rive finishing allowance, tolerance from pe and work information	2219/36226	• Global selection of grid or circle of points by
	nbine nc programming with cad and order	2217/30220	number, distance, angle
2219/301/9 Con		2219/36227	• Assist operator to calculate unknown points,
•	ut part data, dimensions, without graphical		contours
	resentation of part	2219/36228	• Combine two programs to obtain new shifted
-	st block contour then parameter input		positions and new processing data
	line teaching is sound assisted	2219/36229	• Generate missed line when last end point is
	cord actions of human expert, teach by		different from next start point
	wing	2219/36231	 Translate, convert machine independent to
	plication, for cylindrical groove shape		machine dependent program
	gramming languages for lathe, mill or	2219/36232	• Before machining, convert, adapt program to
	eral use mixed		specific possibilities of machine
	I shape data input for end surface	2219/36233	• Convert program so that it can be executed in
	figuration		reverse order
2219/36188 Dee	ep drilling cycle	2219/36234	• Convert program for a 2-axis machine into
2219/36189 Who	eel dressing program	2210/25225	program for 4-axis machine
2219/36191 Prep	pare rough, coarse machining program	2219/36235	 Convert grinding machine oriented language to nc machine oriented
2219/36192 End	l facing	2210/26226	
2219/36193 Sem	ni finish and finish machining	2219/30230	Convert character, ascii, text code to internal
2219/36194 Tap	per angle machining	2210/26227	code and <u>vice versa</u> Prepare nc program for selected, distinct nc
2219/36195 Ass	embly, mount of electronic parts onto board	2219/30237	machines
2219/36196 Grin		2210/36238	Derive marking from punching program,
2219/36197 Nor	n circular workpiece, radius and angle input	2217/30236 • •	secondary from principal program
2219/36198 Gea		2219/36239	Determine automatic, manual machining of
2219/36199 Lase	-		workpiece as function of specific possibilities
2219/36201 Hol	_		of machine tool
2219/36202 Free	_	2219/36241	Convert, translate milling to laser machining
	nding of workpiece, also for long slender		program
		2219/36242	Convert program for different machines with
2219/36204 Lath			different M-code, G-code, header
		2219/36243	• Convert source, high level code to machine,
2219/36206 Eml	•		object code
2219/36207 Invo	•	2219/36244	• Means, use of tables, correlating functions to
2219/36208 Roll	-		instructions
	- -		

	Use of tables to store order of execution of functions	2219/36284	Use of database for machining parameters, material, cutting method, tools
	Comments, messages displayed with program instructions, explain process	2219/36285	Display symbol pattern for kind of machining performed
2219/36247	Remarks, comments as hierarchical structure, indented, corresponds to instructions	2219/36286	Show shape of workpiece, point to coordinates to enter machining parameters
	Generate automatically machining, stitching points from scanned contour		Selection of speed as function of tool diameter Select machining method, parameters as
2219/36249	Generate automatically a balance program for workpiece, dynamic balance		function of dimensions of workpiece Cutting, machining conditions by optimisation
2219/36251	Superpose scanned or finished object image on workpiece model for best fitting		of time, cost, accuracy Cutting, machining conditions by empirical
2219/36252	Generate machining program based on a		equation, like tool life
2219/36253	simulation to optimize a machine parameter Generate machining program from previous		Method to drill, machine based on ratio bore depth, diameter, select tools
2219/36254	Generate machining program from history of	2219/36293	Set feed and speed for specified tool, workpiece as function of ratio cutting force,
2219/36255	similar tools Machining condition, parameter is workpiece	2219/36294	speed Stored coefficients, standard cutting conditions, calculate for entered material
2219/36256	conicity, inclination between surfaces Define upper lower limit of reciprocating	2219/36295	Select optimum process for manufacturing
2219/36257	machining, chopping Indicate region and kind of machining on shape	2219/36296	articles with longer life Order, select, determine, change machining
	of part Machining planning, indicate kind of operation	22.19/36297	sequence, order Machining plan, indicate order of machining as
2219/36259	Indicate primary and secondary operations on		function of presence of operator
	shape, deliver nc data for each Program with subroutines for machining	2219/36298	Enter, change order of different programs to be executed
	process Input workpiece mounting position, setup	2219/36299	Generate sequences of operations starting from finished product, end with raw
	Select cutting direction	2219/36301	Optimisation of sequence of operations
2219/36264	Program movement from first to second		Determine several machining processes and
	machining area	2210/26202	order as function of available tools
	Set machining start point from tool, machining data avoiding interference		Determine several machining processes and order as function of number of mountable tools
	Tool path editor, for offset, multi-passes Process planning editor	2219/36304	Divide into several machining processes, divide each also in several sub processes
	From blank and finished entered shape, derive	2219/36305	Table, correlation tool type and machining
	machining features		category, process
	Separate machining data as function of dependance or independance of material		Table correlation different turrets, slides and possible simultaneous operations
	Enter, edit workpiece data	2219/36307	Table with workpiece features and corresponding machining parameters, methods
	Enter start position, program number for each workpiece	2219/36308	Table for cutting conditions
2219/36273	Use general and tool data to select available tool and machining operation		Program has different modules, each with own load program
2219/36274	Automatic calculation cutting conditions, but operator can enter them also	2219/36311	Machining mode selection, pocket, grooving, raster, area, profile
2219/36275	Select automatically transmission ratio as function of programmed speed	2219/36312	Enter shape with cursor, joystick directions up, down, left, right, slash
2219/36276	Program virtual, logical tools, select tool from		If elements cannot be combined, show error
	tables Flexible fixturing, clamp workpiece, mark		Superpose and combine shapes Library for shapes of tool holders, fixtures,
	clamp regions and store them		chucks
	Topological classification of forming, machining process	2219/36316	Define profile from elements, show only selectable elements
	Machining parameter is strategy for making corners	2219/36317	Input symbol for element, search in library and display
	Machining parameter is technology: surface		Enter start, begin and stop, end point
2219/36282	roughness, corner, contour tolerance Divide complex sculptured surface into		Simplify display, calculation of shapes by deleting holes, grooves
	smaller, easier to machine areas Select, enter machining, cutting conditions,	2219/36321	Program only shape, add approach path and machining conditions automatically
	material file, tool file		machining conditions automatically

2219/36322 Program shape interactively and tool change	2219/36363 Tool change time as function of cutter
position manually by teaching	trajectory, spindle and slide times
2219/36323 Shape is alphabetical character	2219/36364 Tool change time as function of tool switch time, to replace tool with another
2219/36324 Scan drawing, sketch of part, enter on screen coordinates, lines, circles	2219/36365 Program so that minimal tool changes are
2219/36325 • • • Enter shape with mouse, tablet, enter on screen	needed
coordinates, lines, circles	2219/36366 Data, read in, distribution
2219/36326 Define blank, part, area	2219/36367 A tape reader for each axis
2219/36327 Define shape of part	2219/36368 Tape reader
2219/36328 Display closed shape	2219/36369 Measuring object, spectacle glass, to derive
2219/36329 Display path on cylinder by developing	position data
cylinder into a plane	2219/36371 Barcode reader
2219/36331 Display block with cursor or highlight actual	2219/36372 Light, magnetic pen
contour element	2219/36373 Common tape reader for two controllers
2219/36332 Display different faces of work in different	2219/36374 Dual, multiple tape reader
colour	2219/36375 Combination of two devices, floppy disk and
2219/36333 • • • Selection from standard forms, shapes, partprograms, enter value for variable	tape reader
2219/36334 • • • Select a shape, select a point or line and enter	2219/36376 Read out of memory synchronized with machine driven axis
data	2219/36377 Read of several jobs
2219/36335 Select and show already defined lines, circles	2219/36378 Either from tape or other source, using same
to define from them new element	electronics
2219/36336 Select a shape and use it to create a similar	2219/36379 Read in
shape	2219/36381 Timing, synchronization, start of reader
2219/36337 Select similar shape and derive motion defining	2219/36382 Speed of read in of data as function of available
sentences from original shape	power for driving servo, safety
2219/36338 Create program for parallel, simultaneous	2219/36383 Manual input combined with input from
operated slides, timing	computer or tape
2219/36339 • • • Time necessary for one slide equals time for second slide	2219/36384 Load machining program and workpiece
2219/36341 Prepare program to control multiple slides at	delivery program together
the same time	2219/36385 Transfer, load data from rom, bubble memory into ram
2219/36342 Tool path processing, sequence to cut paths	2219/36386 Bootstrap loader
2219/36343 Select machining method as function of	2219/36387 Interface between reader and no
selected tool	2219/36388 Simulate reader to input data direct to nc,
2219/36344 Display different tools in different colours	behind tape reader BTR
2219/36345 Prepare program for minimal idle strokes with	2219/36389 Switch between input from internal manual
multitool turret	thumbwheel and external input
2219/36346 Display feed quantity and cutting speed as	2219/36391 Keep subsystem stopped while load of program
function of material to help user 2219/36347 Select tool if tool life duration is sufficient for	2219/36392 Rewrite date if power loss, check flag area,
operation	marked at start, end of writing
2219/36348 Enter, edit tool, cutter data	2219/36393 Variable read in speed, from max to zero, controls execution speed of program
2219/36349 Compensation part program with form of tool,	2219/36394 Read in data from connected pc instead of nc
in memory	control panel
2219/36351 Display tool shapes to select tool and enter tool	2219/36395 Load local computer program from host, data
dimensions	transfer ram to rom, BTR
2219/36352 Select tool as function of part shape, number of	2219/36396 Load also function code needed to execute part
grooves and groove width	program, compact controller
2219/36353 Display different offset surfaces in different	2219/36397 Read reference data only after certain delay, to
colours to select right tool 2210/26254 Select from table with machining type and	be sure data will not change
2219/36354 Select from table with machining type and corresponding tools	2219/36398 Read of handwritten text
2219/36355 Select tool with fuzzy logic	2219/36399 On excess error or on release joystick stop
2219/36356 Select tool as function of collision avoidance	movement, dead man, shut off motors
2219/36357 Tool line up, select right order of tool, optimal	2219/36401 Record play back, teach position and record it then play back
tool order loading, tool file	2219/36402 Use rope, wire, cable, chain to record position
2219/36358 Use of cd rom with catalog of tools	and for playback
2219/36359 As function of tool location	2219/36403 Incremental detector of position deviation
2219/36361 Tool change time, program for optimal tool	attached to tool for correction
change time	2219/36404 Adapt teached position as function of deviation
2219/36362 Tool change time as function of location in tool	
magazine, index	3-D, 2-D position workpiece

2219/36405	Adjust path by detecting path, line with a	2219/36443	Auto follow coarse contour, operator can
2210/24104	photosensor	2210/25111	correct contour before recording
2219/36406	Use a spring or gas pressure to keep tool on desired path		Contour, teach contour of sawblade
2219/36407	Follow path with probe, store deviations for	2219/30445	Mode selection between large displacement and precision work
2217/30407	correction during normal operation	2219/36446	Keep tool stationary, move workpiece
2219/36408	During machining, store begin and end of		Project light on path to be followed, keep also
	region not finished during first pass		distance constant
2219/36409	Geometric adaptation by sensing force on surface of workpiece, object	2219/36448	Teaching, consider workpoint on workpiece temporarily as tip of end effector
2219/36411	By coarse model of robot to modify commands, learned by feedforward controller	2219/36449	During teaching use standard subroutines, assemble them to macro sequences
2219/36412	Fine, autonomous movement of end effector by using camera	2219/36451	Handheld toollike probe, work instructor, lightweigted, connected to recorder
	Adapt playback as function of hardness material, time comparison to reach start point	2219/36452	Touch points with handheld probe, camera detects position and orientation probe
2219/36414	Compare image detected path with stored	2219/36453	Handheld tool like probe
	reference, difference corrects position	2219/36454	Master slave, director agent, operator
2219/36415	Adjust path and attitude tool by detecting path,		replication
2210/26416	line with a photosensor, laser	2219/36455	Sensor, tactile feedback, operator feels forces
2219/36416	Adapt teached position as function of deviation 3-D, 2-D position of end effector, tool	2210/26456	of tool on workpiece
2210/36/17	Programmed coarse position, fine position by		Learning tool holding dynamics
2217/30417	alignment, follow line, path adaptive	2219/3645/	During teaching, force set point is automatically adapted to circumstances
2219/36418	Modify trajectory by operator gesture, gesture	2219/36458	Teach only some points, for playback
	force sensed by end effector	2217/30430	interpolation between points
2219/36419	Compare modified, corrected path with stored	2219/36459	offline program for plural robots, send data to
	reference, difference too large alarm		corresponding robots
	Assist in correction of position to form a circle or line	2219/36461	Teach for each next similar fixture, piece only some reference points
2219/36422	During teaching shut off, disable motor to	2219/36462	Minimize teach time, compress data, many
2210/26122	move arm easy		points in curve, few in line
2219/36423	During teaching release brake or decouple clutch from motor	2219/36463	Manual switch to drive motor to wanted
2210/36/24	Balance mechanically arm to be moved	2210/26464	position, store, memorize position
	Move manually, touch surface, record position	2219/36464	Position, teach, store extreme, full open, closed positions
	Pilot lamp on end effector to guide operator	2219/36465	Teach and store also intermediate, between full
	Jog feed to a command position, if close	2217/30103	open and closed positions, areas
	enough robot takes over positioning	2219/36466	Teach motion profile in both directions,
2219/36428	During teaching set torque instruction for		between full closed and open position
	motor to zero	2219/36467	Teach and store time needed from open to
	Power assisted positioning		closed and closed to open position
2219/36431	Tv camera in place of tool, on display operator	2219/36468	Teach and store intermediate stop position in
2210/26122	marks points, crosshair	2210/26460	moving route to avoid collision
2219/36432	By putting some constraints on some DOF, move within limited volumes, areas, planes,	2219/36469	Separate axis movement with higher acceleration replaces simultaneous movement
	limits motion in x, y or z planes, virtual reality	2219/36471	Recording speed different from playback speed
	constraints		During teaching low servo power, during
2219/36433	Position assisted teaching	2217/307/2 • • •	playback high servo power
	During teaching direct control signal to power	2219/36473	Prohibit teaching if force, speed, acceleration
	servo for quick response		of end effector is out of safe range
2219/36435	Electromyographical, myoelectric control	2219/36474	Prohibit normal manipulator control during
	signal		teaching
2219/36436	Arm follows movement of handheld device,	2219/36475	When operator near robot, local pendant is
2210/27/27	camera detects, analyses motion	2210/245	enabled otherwise select local remote
	Follow coarse programmed surface, detect contact feeler or no force, record point		Record points if sufficient difference with previous position exists
2219/36438	Manually selection of points on surface to select area to scan automatically	2219/36477	Timing record position according to pulses coding wheel
2219/36439	Guide arm in path by slaving arm to projected path, beam riding	2219/36478	Record on predetermined time, read in position,
2219/36441	Follow contour, line with sensor and record	2210/26/170	measured data Record position on trigger of touch probe
2217/30111	points		Record at predetermined distances, read in
2219/36442	Automatically teaching, teach by showing	2217/30101 • • •	position, measured data

2219/36482 Recording of position and of command instructions	2219/36523 Select with code on workpiece, fixture, clamp, object
2219/36483 Recording mechanical properties, tonal quality by force detection	2219/36524 Selection of Rom and ram 2219/36525 On bad data block, reverse motion, correct and
2219/36484 Each teached point has a correlated amount of shift data, independently modified	execute block
2219/36485 Memorize open and closed state, motion	2219/36526 Regenerate, hold reference previous block for bad actual value, block
parameters at each start up 2219/36486 Memorize workpiece deviations as function of	2219/36527 Separate input for machine data from operator and for program from programmer
angle, compensate, extra feed 2219/36487 Record position, motion and sound	2219/36528 Interlock, inhibit nc control while tranferring data from host
2219/36488 Record motion and emotion, mimics	2219/36529 Warn, alert, notify operator to confirm a preset
2219/36489 Position and force	override value, command
2219/36491 Contour of workpiece where other workpiece is to be installed	2219/36531 Inhibit, ignore or postpone new command if previous is still in execution
2219/36492 Record position and orientation, posture of	2219/36532 Detect overflow of buffer
probe, tool	2219/36533 Writing critical contour data as a whole, inhibit
2219/36493 • • • Position of stillstand if no reverse and acceleration only, data compression	read out during writing 2219/36534 Manual input overrides automatic control
2219/36494 • • • Record position and inclination of tool, wrist	2219/36535 Check if instruction is executable, if not
2219/36495 Recording position and other parameters,	message to operator
current, tool diameter, voltage	2219/36536 Inhibit, forbid, prevent execution of program if
2219/36496 Memorize open, closed state of hand and	no tool or worpiece data
corresponding motion parameters such as open,	2219/36537 On error acoustic signal
close and move, no move	2219/36538 Different tunes, melodies, voice patterns for
2219/36497 Select program, main and secondary program 2219/36498 Main and secondary program for repeating	different error indication 2219/36539 Different colours for program and machine
same operations	error, failure display
2219/36499 Part program, workpiece, geometry and environment, machining dependant, combine	2219/36541 Operation command stored in register, on completion also in other register
2219/36501 For each contour a tape, a program	2219/36542 Cryptography, encrypt, access, authorize with
2219/36502 Ram for variable servo data, rom for fixed	key, code, password
servo routine	2219/36543 Input a standard value automatically on power
2219/36503 Adapt program to real coordinates, software orientation	up or after power loss 2219/36544 Inhibiting manual control while under
2219/36504 Adapt program to real coordinates, shape,	automatic, other control <u>vice versa</u>
dimension of tool, offset path	2219/36545 Safety, save data at power loss
2219/36505 Compare stored conditions to actual, adapt	2219/36546 Memory protection, protected fields
program	2219/36547 Use binary code to avoid program tampering
2219/36506 Store in Rom and Ram	2219/36548 Save data if trigger signal received
2219/36507 Select program or execute command, control instructions as function of axis position	2219/36549 Regenerate faulty program block from previous and next block
2219/36508 • • • Each pallet, workpiece, tool holder, selects corresponding tape reader, program	2219/36551 Inhibiting control after detecting data error
2219/36509 Select as function of shape, dimension of	2219/36552 Inhibiting simultaneous input from local and remote keyboard
workpiece 2219/36511 Select by a detector	2219/36553 Track, channel on tape for each direction of
2219/36512 Select by a detector 2219/36512 Select by a selector, dip switch	movement 2219/36554 Copy modified, corrected program to another
2219/36513 Select out of a plurality of programs, patterns	tape, keep original intact
2219/36514 Select by force, height or other detection	2219/36555 Two tapes, programs one for position data, one
2219/36515 As function of material or pattern direction,	for commands
nerves of wood for optimal cutting	2219/36556 Compare, check original tape with converted,
2219/36516 Select acceleration deceleration profile as	copy tape
function of kind of machine Selection no program rejets to metad	2219/36557 Copy entered program in memory to tape
2219/36517 Selecting nc program points to mated manipulator, robot program	2219/36558 Forward and backward reading of tape, reverse execution program
2219/36518 Selection of calibration program as function of parameter to be calibrated	2219/36559 Copy one tape to another, transfer program from tape to tape, back-up
2219/36519 • • • After sporadic change of program, return to	2219/36561 Tape, band
program in use before	2219/36562 One tape, copy feeler controls several machines
2219/36521 Select by combination of detected force,	2219/36563 Two tapes
acceleration, speed, work rate	2219/36564 Position of hole in tape corresponds with
2219/36522 Select program using a management, workpiece number	position of hole on workpiece

2210/26565	2210/27024 Manager in the color of the color
2219/36565 Cartesian and polar data mixed 2219/36566 Mix polar data with cartesian data	2219/37024 Measure single value, parameter with two detectors
2219/36567 On tape also commands for equipment attached	2219/37025 Retract, swing out of the way, measuring
to machine	device during normal machining for protection
2219/36568 Control data is sequence of position, axis	2219/37026 Adjust sensor radially
indication, time delay for speed	2219/37027 Sensor integrated with tool or machine
2219/36569 Enter, punch only different, changed data, same	2219/37028 Detail, extended range, discrimination, switch
not repeated in next block	from one range to other
2219/36571 Coarse and fine dimensions	2219/37029 Power supply position detector in common with drive motor
2219/36572 Macro data or coarse dimension on tape 2219/36573 X, y, z and tooloffset values or direction values	2219/37031 • • • Lvdt for x and y in a plane, center lines
2219/36574 Absolute x or delta x values	intersect at locating point
2219/36575 On tape reference and command signals	2219/37032 Generate vibrations, ultrasound
2219/36576 Relative phase of signals is variable	2219/37033 Energy saving by powering feedback device,
2219/36577 Signals have a position dependant frequency	potentiometer only during measuring
2219/36578 Tracks for x, two for delta x, one for sign, three	2219/37034 Actuator coil is also used as measuring coil
for y	2219/37035 Sensor in air gap of drive, detect directly speed
2219/36579 Only true dimension is recorded, no tool offset	or position
2219/36581 X, Y, Vx, Vy	2219/37036 Position normally, stop, measure position tool with second independent sensor
2219/36582 Special order	2219/37037 Remeasure workpiece regularly for
2219/36583 Each punched hole is one pulse, increment	deformation
2219/36584 X, Y, Z and tool offset or corrections	2219/37038 Protection cover over measuring device, probe,
2219/36585 Speed and acceleration, rate of change of speed	feeler opened when measuring
2219/36586 Word address format	2219/37039 Digitize position with flexible feeler, correction
2219/36587 Binary format 2219/36588 Endless loop	of position as function of flexion
2219/36589 Making control tape	2219/37041 Digitize, electric wires form grid on surface
2219/36591 Tape moves synchronized with machine driven	2219/37042 Photographic, picture on film, photogrammetry
axis	2219/37043 Touch probe, store position of touch point on
2219/36592 Each track controls an axis	surface
2219/37 Measurements	2219/37044 Ultrasound transmittors on surface, touch probe detects ultrasound, triangulation
2219/37001 Measuring problems	2219/37045 Probe detects electromagnetic fields from grid,
2219/37002 Absence, detect absence, presence or correct	antenna like digitizing tablet
position of workpiece	2219/37046 Use simultaneous several pairs of stereo
2219/37003 Detect if no workpiece in holder	cameras, synchronized
2219/37004 Detect absence of tool	2219/37047 • • • After digitizing, edit graphically data
2219/37005 Absence of tool accessories, material, like	2219/37048 Split beam, stripe projection on object, lines
nails, staples, glue 2219/37006 Measuring bars	detected with cameras
2219/37007 Join bars or cilinders binary	2219/37049 First a rasterscan, then align workpiece as function of height average, scan again
2219/37008 Calibration of measuring system, probe, sensor	2219/37051 • • • First coarse measurement, around each point a
2219/37009 Calibration of vision system, camera, adapt	fine measurement of surface
light level	2219/37052 Sense surface, mean value used as reference
2219/37011 Set absolute marks on disk as exact position or	surface
address to position memory	2219/37053 Optical triangulation
2219/37012 Adjust angular position of transducer	2219/37054 Digitize every grid point of a raster
2219/37013 Faulty number of total scale increments	2219/37055 Project stripes having a regular sine wave
corrected evenly over scale	2219/37056 Mark point to be digitized graphically on
2219/37014 Use of calibration bar, bar with cams 2219/37015 Adaptive online camera, vision calibration	screen
2219/37016 Calibrate dc offset, measure offset and maintain	2219/37057 Several feelers, probes touch model in rasterpoints
fixed level	2219/37058 Digitize not only position but also colour
2219/37017 Calibration of vision system, set correct	2219/37059 Probe connected to three pair of wires of which
attidude of sensor to workpiece	the length is measured
2219/37018 Make measuring scale machine tool	2219/37061 Use matrix of optical sensors to detect form,
2219/37019 Position detection integrated in actuator, lvdt	edges of object
integrated linear actuator	2219/37062 Regulated scanning, the head deflection is
2219/37021 Robot controls position of touch probe	controlled by a regulation circuit
2219/37022 Detector, measuring device incorporated within	2219/37063 Controlled scanning, the head is moved along a
workpiece holder 2219/37023 Step motor used as measuring device and as	given path 2219/37064 After digitizing, reconstruct surface by
drive motor	interpolating the initial mesh points
on. o motor	merpotating the initial mesh points

2219/37065 Map of stiffness, compliance of object	2219/37113 Psd position sensitive detector, light spot on
2219/37066 Image from object together with references on	surface gives x, y position
background	2219/37114 Precision screw
2219/37067 Calibrate work surface, reference markings on	2219/37115 Photogrammetric position detection
object, work surface	2219/37116 Shape sensor leads tool, in front of tool
2219/37068 Setting reference coordinate frame	2219/37117 Optical sensor, delivers analog signal as
2219/37069 Calibrate probe, imitated tool, repeated measurements for different orientations	function of displacement
2219/37071 Measurement program is created, executed on	2219/37118 Inductive, coil moves over conical, tapered core
object data, no real object, no CMM is present	2219/37119 Atomic force probe
2219/37072 Surface covered with grid of electric wires, of	2219/37121 Linear transducer
coloured tape on object	2219/37122 Signal analyser
2219/37073 Workpiece surface covered with shielding	2219/37122 Signar analyser 2219/37123 Extensible ball bar with potentiometer, lvdt
coating, against disturbing fields	2219/37124 Magnetic sensor
2219/37074 Projection device, monitor, track tool,	2219/37125 Photosensor, as contactless analog position
workpiece form, process on display	sensor, signal as function of position
2219/37075 Print out of document measured results or	2219/37126 Wire, tape around cylinder measures
record on tape	displacement, string encoder
2219/37076 Display load on tool, motor graphically on	2219/37127 Spm scanning probe microscopy, stm scanning
screen	tunneling microscopy
2219/37077 Relative movement	2219/37128 Tool itself emits vibrations to be detected to
2219/37078 Display machining, processing parameters with	build an image of surface
curves, pictograms	2219/37129 Mark, engrave workpiece at specific surface
2219/37079 Display probing result on drawing taken from	point for measurement, calibration
cad data	2219/37131 Moire pattern, diffraction grating, fringe
2219/37081 Display machining parameters	2219/37132 Polyhedral prism
2219/37082 Indicate, point region on path, locus, display	2219/37133 Linear, rotary variable differential transformer,
path and machining parameters	lvdt, rvdt
2219/37083 Switch display from normal mode to inspection mode, to monitor conditions	2219/37134 Gyroscope
2219/37084 Display tool parameters	2219/37135 Two counters receiving pulses from two
2219/37085 Display tool parameters 2219/37085 Display in real time of state variables of control	encoders, one for speed, one for position
system	2219/37136 Control resolution of encoder
2219/37086 Display real, measured machining load	2219/37137 Encoder combined with barcode label, reader
2219/37087 Cutting forces	2219/37138 Encoder and gear and absolute coder, give
2219/37088 Indicate service condition, status	together absolute position of rotation
2219/37089 Speed error	2219/37139 Sampling output of encoder at precisely defined intervals
2219/37091 Motion and force	2219/37141 Programmable divider for counter as buffer for
2219/37092 Display position actual and or target	microprocessor, read on interrupt
2219/37093 Display speed	2219/37142 Center position between two pulses, in the
2219/37094 Hall sensor	middle of a bit
2219/37095 Digital handheld device with data interface	2219/37143 Divide feedback pulses to make feedback
2219/37096 Invar scale, low temperature coefficient	independent from resolution encoder
2219/37097 Marker on workpiece to detect reference	2219/37144 Delay marker to synchronize motions
position	2219/37145 Multiturn fine counter counts total pulses,
2219/37098 X y scale plate instead of two ruler scale, two	index counter counts turns
dimensional scale	2219/37146 Second counter reset to zero on marker, to
2219/37099 One detector for coarse and fine target location,	detect counting errors
variable resolution	2219/37147 Sampling rate low during power loss
2219/37101 Vector gauge, telescopic ballbar	2219/37148 Switch between rise, fall of pulses of one phase
2219/37102 Single detector for whole range, both x and y	and of both phases, coarse fine
axis	2219/37149 Multiplexer to send encoder and rotor pole
2219/37103 Limit, proximity switch	position to same output lines
2219/37104 Absolute encoder	2219/37151 Handling encoder signal, compensation for
2219/37105 Soft limit, store limits in counters, use content	light variation, stray light 2219/37152 Combination 00-01-10-11, previous, actual
of counters as limit	pulses, or two series of pulses, and rom
2219/37106 Inductive, differential transformer, pins	2219/37153 Encoder delivers only one channel of pulses,
2219/37107 Acupin	using only one detector
2219/37108 Rasters, grid on xy-plane Photosphotoin scanned rester rule and photosphotoin	2219/37154 Encoder and absolute position counter
2219/37109 Photoelectric scanned raster, rule and photocell, microscope	2219/37155 Encoder and delta position counter
2219/37111 Rule and photocell, microscope	2219/37156 Pulse derived from belt driving drum
2219/37111 Kute and photocen, microscope 2219/37112 Several scales with one device	
2217/3/112 • • • Several scales with one device	

2219/37157 Pulses derived from brake disk having north	2219/37199 Hole location
and south poles	2219/37201 Measuring several points at the same time
2219/37158 Pulse derived from perforated belt along track	2219/37202 Footprint, probe piece on machine, then on
2219/37159 Source of pulse, pulse derived from gear, plate	cmm to avoid errors of machine
teeth	2219/37203 Compensate probed values as function of
2219/37161 Motor rotor has a normal magnetised ring and a	reference plane of fixture, clamp
second ring, magnetic decoder	2219/37204 Move synchronously associated sensor
2219/37162 Marker, reflector mounted on chuck, workpiece	elements independently at both sides
holder	2219/37205 Compare measured, vision data with computer
2219/37163 Marker derived from phase of motor 2219/37164 Pulse derived from encoder built into ball	model, cad data
bearing	2219/37206 Inspection of surface
e	2219/37207 Verify, probe, workpiece
2219/37165 Derive pulse from commution position, build into brushless motor	2219/37208 Vision, visual inspection of workpiece
2219/37166 Rotating magnets shunt motor over resistance,	2219/37209 Estimate life of gear, drive
cause current variations	2219/37211 Measure temperature, compensate cmm
2219/37167 Count number of periods of voltage supply	program for temperature
2219/37168 Inductive sensor senses fluctuations, spikes in	2219/37212 Visual inspection of workpiece and tool
motor current	2219/37213 Inhibit measuring if one of the joints is near
2219/37169 Derive incremental pulse from motor current	endstop
deviation	2219/37214 Detect failed machine component, machine
2219/37171 Commutation brushes, sensors deliver	performance degradation
increment	2219/37215 Inspect application of solder paste, glue to workpiece
2219/37172 Encoder with hall effect and reed relays, and	2219/37216 Inpect component placement
decoder gives absolute position	2219/37217 Inspect component placement 2219/37217 Inspect solder joint, machined part, workpiece,
2219/37173 Encapsulate electronics of encoder in resin,	welding result
electronics and encoder integrated	2219/37218 Compensate for offset due to probe diameter,
2219/37174 Encoder with infrared	detect exact contact point
2219/37175 Normal encoder, disk for pulses, incremental	2219/37219 Predict next probed point from previous probed
2219/37176 Disk emits phase shifted pulses, special	points
convertor	2219/37221 Probe fixture to know datum points
2219/37177 Linear encoder	2219/37222 Probe workpiece for correct setup
2219/37178 Magnetic marks on screw	2219/37223 Identify minimum number of appropriate
2219/37179 Coarse encoder combined with fine grid ccd	measuring points
detector	2219/37224 Inspect wafer
2219/37181 Encoder delivers sinusoidal signals	2219/37225 Tool holder, measure forces in chuck, tool
2219/37182 Slit plate encoder	holder
2219/37183 Marker or index or coded information as well	2219/37226 Monitor condition of spindle, tool holder,
as position pulses	transmit to nc controller
2219/37184 Hall generator cooperates with magnetic ring,	2219/37227 Probing tool for its geometry
gives signal with dc offset	2219/37228 Tool inspection, condition, dull tool
2219/37185 Magnetic ring and sensor	2219/37229 Test quality tool by measuring time needed for
2219/37186 Camera reads large number of marks, derive	machining
frequency of dark-light	2219/37231 Tool used as touch probe, sensor
2219/37187 Disk with magnetic, inductive sensors	2219/37232 Wear, breakage detection derived from
2219/37188 Encoder pulses reset high resolution clock, get	tailstock, headstock or rest
position from counting clock pulses	2219/37233 Breakage, wear of rotating tool with multident
2219/37189 Camera with image processing emulates	saw, mill, drill
encoder output	2219/37234 Monitor tool before, after and during
2219/37191 General problems for standing waves, torque,	machining
surface inspection	2219/37235 Detect bad tool by relative movement of tool
2219/37192 Problems	with respect to tool holder
2219/37193 Multicoordinate measuring system, machine,	2219/37236 Tool serves, acts also as measuring device
CMM 2210/37104 Proba work, calculate shape independent of	2219/37237 Tool collision, interference
2219/37194 Probe work, calculate shape independent of position, orientation, best fit	2219/37238 Missing tool
2219/37195 Measuring dimension independent from	2219/37239 Plastic deformation of tool
accuracy of nc, machine tool	2219/37241 Displacement of tool, miss inserted
2219/37196 Measuring station, flexible, integrated cmm	2219/37242 Tool signature, compare pattern with detected
2219/37197 From measured data derive form, roundness,	signal
orientation, parallel, straightness	2219/37243 Tool breakage by comparing tool image, length before and after machining
2219/37198 Machine as measuring station, use tool or	2219/37244 Detect tool breakage already in tool magazine
probe, in process incycle	2219/37244 Breakage tool, failure
	• • • Dicarage tool, failure

2219/37246 Compare estimated torques of different axis with reference for breakage	2219/37296 Electronic graduation, scale expansion, interpolation
2219/37247 By electrical contact, disappears when breakage	2219/37297 Two measurements, on driving motor and on slide or on both sides of motor
2219/37248 By monitoring changes in capacitive circuit	2219/37298 Two measurements, position of slide and
2219/37249 Correction coefficient of life time as function	position of tool
of kind of machining	2219/37299 Measure same parameter from three different
2219/37251 Selfcorrecting, counter for tool life adapts	space directions
correction 2219/37252 Life of tool, service life, decay, wear estimation	2219/37301 Two measurements, speed with tachometer and speed with encoder
2219/37253 Fail estimation as function of lapsed time of	2219/37302 Measure tool length, workpiece configuration
use	without stopping movement
2219/37254 Estimate wear of subsystem of machine with	2219/37303 Two measurements, speed of motor and speed
measures from other subsystems	of load
2219/37255 Using fuzzy logic techniques	2219/37304 Combined position measurement, encoder and separate laser, two different sensors
2219/37256 Wear, tool wear 2219/37257 Crater wear of tool	2219/37305 Drive step motor with pulses, at stop with dc
2219/37258 Calculate wear from workpiece and tool	current to avoid emi when measuring
material, machining operations	2219/37306 Two sensors and two scales for same
2219/37259 Resolver for coarse, photo cell for fine position	measurement of relative movement between x
on grid crossing	y 2219/37307 Detector in line, in plane of tool to avoid
2219/37261 Encoder and potentiometer to detect fault	parallax
measurement 2219/37262 Mixing pins and fine positioning	2219/37308 Measure workpiece relieved from stress,
2219/37263 Absolute and incremental encoder, detector	redrawn, disengaged tool
combined	2219/37309 Selecting a desired sensor structure
2219/37264 Cam for absolute positions, encoder for	2219/37311 Derive speed from current, use of lookup table
incremental position	2219/37312 Derive speed from motor current
2219/37265 Rotary potentiometer and incremental counter for each maximum	2219/37313 Derive speed from position 2219/37314 Derive position from speed
2219/37266 Infrared	2219/37315 High speed and low speed signals are derived
2219/37267 Thermocouple	in a different way
2219/37268 Tool workpiece junction, thermoelectric	2219/37316 Derive speed from two phased position signals,
interface	with high range and resolution
2219/37269 Ultrasonic, ultrasound, sonar	2219/37317 Derive position from current, voltage, back electromotive force bemf
2219/37271 Using standing waves	2219/37318 Derive speed from back electromotive force,
2219/37272 Capacitive 2219/37273 Wheatstone bridge	bemf
2219/37274 Strain gauge	2219/37319 • • • Derive acceleration, force, torque from current
2219/37275 Laser, interferometer	2219/37321 Derive acceleration from net driving force
2219/37276 Position changes frequency	2219/37322 Derive position from frequency power supply
2219/37277 Inductive proximity sensor	2219/37323 Derive acceleration from position or speed
2219/37278 Optical waveguide, fiberoptic sensor	2219/37324 Derive position, speed from acceleration 2219/37325 Multisensor integration, fusion, redundant
2219/37279 Fiber optic proximity sensor	2219/37326 • • • Automatic configuration of multisensor,
2219/37281 Laser range finder 2219/37282 Current transformator	adaptive, active sensing
2219/37283 Photoelectric sensor	2219/37327 Select lookup table corresponding to sensor
2219/37284 Capacitive 3-D proximity sensor	2219/37328 Decentralised data fusion
2219/37285 Load, current taken by motor	2219/37329 Far away and near by sensor groups
2219/37286 Photoelectric sensor with reflection, emits and	2219/37331 Sensor fusion using extended kalman filter 2219/37332 Detect power of noise source using sound and
receives modulated light	visual sensors
2219/37287 Fiber optic interferometer	2219/37333 Position of control valve and position of
2219/37288 Tracking lasers follow object, reflection gives 3-D position	controlled actuator

2219/37348 Power, wattmeter voltage times current 2219/37349 Unbalance of tool or tool holder	2219/37405 Contact detection between workpiece and tool,
2219/37351 Detect vibration, ultrasound	probe, feeler 2219/37406 Detect position of detector contact point
	relative to reference on tool slide
2219/37352 Frequency	2219/37407 Detect position of detector contact point
2219/37353 Amplitude	relative to reference on tool
2219/37354 Powerfactor, phase between voltage and current	2219/37408 Combination of contact and contactless
2219/37355 Cutting, milling, machining force	detection to avoid tool contact with workpiece
2219/37356 Torsion, twist	2219/37409 Measure different pressure of fluid flow on
2219/37357 Force, pressure, weight or deflection	contacting surface
2219/37358 Depth of cut	2219/37411 Measure contact from force and velocity
2219/37359 Contour, to sense corners, edges of surface	detection
2219/37361 acoustic feedback, for speed, if speed very low	2219/37412 acoustical detection of contact
hearing is better than seeing	2219/37413 By conductivity, short circuit between tool,
2219/37362 Hardness	probe and metallic surface
2219/37363 Texture	2219/37414 By microswitch
2219/37364 Thermal conductivity	2219/37415 By cutting light beam
2219/37365 Surface shape, gradient	2219/37416 By measuring phase shift between voltage and
2219/37366 Colour, surface colour	current of feedmotor
2219/37367 Grinding rate	2219/37417 By linear varying electrical signal
2219/37368 Displacement perpendicular to probe	2219/37418 By capacitive means
movement	2219/37419 Measuring rotation of non driven axis after
2219/37369 Measure tool lenght and diameter together with	being touched by driven axis
single sensor	2219/37421 Measure braking, slower rotation of driven
2219/37371 Flow	axis, tool upon contact
2219/37372 Position and speed	2219/37422 Distance and attitude detector
2219/37373 Friction	2219/37423 Distance, gap between tool and surface sensor
2219/37374 Deflection	2219/37424 Calculate distance from known inner diameter
2219/37375 Climate, temperature and humidity	of coil, bobbin and detected image
2219/37376 Inclination, gradient of machine base	2219/37425 Distance, range
2219/37377 Roundness of workpiece	2219/37426 Detected with infrared sensor
2219/37378 Balance of workpiece from vibration sensor	2219/37427 Detected with thermocouple
and angle sensor	2219/37428 Temperature of tool
2219/37379 Profile, diameter along workpiece	2219/37429 Temperature of motor
2219/37381 Force in steady rest	2219/37431 Temperature
2219/37382 Voltage over or short circuit between tool and	2219/37432 Detected by accelerometer, piezo electric
workpiece	2219/37433 Detected by acoustic emission, microphone
2219/37383 Tool length	2219/37434 Measuring vibration of machine or workpiece
2219/37384 Change of actuator current	or tool 2210/27425 With ration of maskins
2219/37385 Peripheral speed	2219/37435 Vibration of machine
2219/37386 Lateral movement of tool	2219/37436 Prediction of displacement, relative or absolute,
2219/37387 Nanometer position	motion 2219/37437 Prediction of cutting force with flexible ball
2219/37388 Acceleration or deceleration, inertial	end milling model
measurement	2219/37438 Prediction of machining error with flexible ball
2219/37389 Magnetic flux	end milling model
2219/37391 Null, initial load, no load torque detection or	2219/37439 Computer assisted inspection, cad interactive
other parameter at no load	with manual commands
2219/37392 Motion	2219/37441 Use nc machining program, cad data for
2219/37393 acoustic feedback varies as function of	measuring, inspection
positional error	2219/37442 Cad and cap for cmm
2219/37394 Measuring diameter of workpieces with	2219/37443 Program cmm, coordinate measuring machine,
longitudinal grooves	use cad data
2219/37395 Detection sparks during machining	2219/37444 Program cmm by using a stylus to detect points
2219/37396 Tactile feedback, operator feels reaction, force reflection	on a real workpiece

2219/37445 Load teaching program from file server, enter	2219/37493 Use of different frequency band pass filters to
teaching data at pendant 2219/37446 Select measuring program together with control	separate different signals 2219/37494 Intelligent sensor, data handling incorporated in
parameters 2219/37447 Path planning using ann, for measurement task	sensor 2219/37495 Correction of measured value as function of
pattern, optimal path, dummy points	given, reference surface
2219/37448 Inspection process planner	2219/37496 Root mean square
2219/37449 Inspection path planner	2219/37497 Summing, integration of signal
2219/37451 Plan sensor placement for optimal inspection	2219/37498 Variable amplification, gain for detected signal,
2219/37452 Generate nc program from metrology program,	select correct level range
defining cmm probe path	2219/37499 Determine cumulative deviation, difference
2219/37453 Simulate measuring program, graphical interactive generation of program	2219/37501 Delay detected signal avoids transients, start up noise
2219/37454 Interactive, enter also tolerance	2219/37502 Input signal converted to logarithmic value
2219/37455 After entering one measuring cycle, display in separate window instruction list	2219/37503 Set integrator of acceleration detector to zero at velocity zero, avoids drift
2219/37456 Program proposes measuring points	2219/37504 Differential use of sensors, to double precision
2219/37457 On machine, on workpiece	2219/37505 Debounce contact signal from absolute
2219/37458 Reference on machine, on workpiece and on	reference position cam
tool	2219/37506 Correction of position error
2219/37459 Reference on workpiece, moving workpiece moves reference point	2219/37507 Spectral density analysis
2219/37461 Two rotary potentiometers, only one used,	2219/37508 Cross correlation
switch over to other on ambiguity	2219/37509 Intelligent sensor, incorporation temperature compensation
2219/37462 Resistor, potentiometers	2219/37511 Select and process only those detected signals
2219/37463 Tapped resistors, not continuous	needed for a certain purpose
2219/37464 Potentiometer with dual wiper 2219/37465 Magnetic resistor	2219/37512 Correction for detection delay 2219/37513 Convert time domain signal to frequency
2219/37466 Dual potentiometers with sin and cos output	domain signal
2219/37467 Continuous rotary potentiometer, no end	2219/37514 Detect normality, novelty in time series for
2219/37468 Magnetic resistor sensors used as incremental	online monitoring
encoder	2219/37515 Error separation, eliminate eccentricity
2219/37469 Two, more slides use resolver with common secondary, different primary frequency	2219/37516 Combine results, opinions of multiple but same sensors, fuzzy logic
2219/37471 Resolver, synchro	2219/37517 Compensation of position for vibration of
2219/37472 Synchro	probe, calibration x-y lookup table
2219/37473 Resolver	2219/37518 Prediction, estimation of machining parameters
2219/37474 Resolver with several phases	from cutting data
2219/37475 Resolver emits two redundant signals for safety	2219/37519 From machining parameters classify different fault cases
2219/37476 Single resolver for speed, rotor and absolute	2219/37521 Ann to map sensor signals to decision signals

2219/39013 • • Locate movable manipulator relative to object, compare to stored gridpoints	2219/39051 Calibration cooperating manipulators, closed kinematic chain by alignment
2219/39014 Match virtual world with real world	2219/39052 Self calibration of parallel manipulators
2219/39015 With different manipulator configurations, contact known sphere, ballbar	2219/39053 Probe, camera on hand scans many points on own robot body, no extra jig
2219/39016 Simultaneous calibration of manipulator and	2219/39054 From teached different attitudes for same point
camera	calculate tool tip position
2219/39017 Forward calibration, find actual pose world	2219/39055 Correction of end effector attachment, calculated from model and real position
space for given joint configuration	2219/39056 On line relative position error and orientation
2219/39018 Inverse calibration, find exact joint angles for given location in world space	error calibration
2219/39019 Calibration by cmm coordinate measuring machine over a certain volume	2219/39057 Hand eye calibration, eye, camera on hand, end effector
2219/39021 With probe, touch reference positions	2219/39058 Sensor, calibration of sensor, potentiometer
2219/39022 Transform between measuring and manipulator	2219/39059 Sensor adaptation for robots by software
coordinate system	2219/39061 Calculation direct dynamics
2219/39023 Shut off, disable motor and rotate arm to	2219/39062 Calculate, jacobian matrix estimator
reference pin	2219/39063 Quick calculation of coordinates by using precalculated, stored matrixes, inverses
2219/39024 Calibration of manipulator	2219/39064 Learn kinematics by ann mapping, map spatial
2219/39025 Spheric tool interrupts transmitted calibration beam, in different configurations	directions to joint rotations
2219/39026 • • • Calibration of manipulator while tool is	2219/39065 Calculate workspace for end effector,
mounted	manipulator
2219/39027 • • • Calibrate only some links, part of dofs, lock some links, ref pins on links	2219/39066 Two stage inverse kinematics algorithm, first inner joint variables, then outer
2219/39028 Relative to base calibrated 6-DOF device, cmm	2219/39067 Calculate max load a manipulator can repeatedly lift
connected between wrist and base Verify if calibration position is a correct by	2219/39068 Time needed to execute an instruction
2219/39029 • • • Verify if calibration position is a correct, by comparing with range in rom	2219/39069 Inverse kinematics by arm splitting, divide six
2219/39031 • • • Use of model for robot and for measuring	link arm into two three link arms
device	2219/39071 Solve inverse kinematics by ann learning
	nonlinear mappings, consider smoothness

2219/39072 Solve inverse kinematics by linear hopfield	2219/39112 Force, load distribution
network	2219/39113 Select grasp pattern based on motion oriented
2219/39073 Solve inverse kinematics by fuzzy algorithm 2219/39074 By formal substitution of two consecutive	coordinability 2219/39114 Hand eye cooperation, active camera on first
joints by a spherical joint	arm follows movement of second arm
2219/39075 Solve inverse kinematics by error back	2219/39115 Optimal hold and moving force, torque
propagation ebp	2219/39116 Constraint object handled in cooperation
2219/39076 • • • Learn by function division, change only one variable at a time, combine shapes	2219/39117 Task distribution between involved
2219/39077 Solve inverse geometric model by iteration, no	manipulators 2219/39118 Cooperation between manipulator and vehicle
matrixes inversion	with manipulator
2219/39078 Divide workspace in sectors, lookup table for	2219/39119 Path constraint handling of object
sector joint angle	2219/39121 Two manipulators operate on same object
2219/39079 Solve inverse differential kinematics in closed, feedback loop, iterate	2219/39122 Follower, slave mirrors leader, master
2219/39081 Inexact solution for orientation or other DOF	2219/39123 Manipulate, handle flexible object 2219/39124 Grasp common rigid object, no movement end
with relation to type of task	effectors relative to object
2219/39082 Collision, real time collision avoidance	2219/39125 Task is grasp object with movable parts, like
2219/39083 Robot interference, between two robot arms	pliers
2219/39084 Parts handling, during assembly	2219/39126 Manipulate very large objects, not possible to
2219/39085 Use of two dimensional maps and feedback of external and joint sensors	grasp, open palm and use of links 2219/39127 Roll object on base by link control
2219/39086 Reduce impact effect by impact configuration	2219/39128 Grasp tool with two manipulators, rigidity, and
of redundant manipulator	use tool
2219/39087 Artificial field potential algorithm, force	2219/39129 One manipulator holds one piece, other inserts,
repulsion from obstacle	screws other piece, dexterity
2219/39088 Inhibit movement in one axis if collision danger	2219/39131 Each of the manipulators holds one of the
2219/39089 On collision, lead arm around obstacle	pieces to be welded together 2219/39132 Robot welds, operates on moving workpiece,
manually	moved by other robot
2219/39091 Avoid collision with moving obstacles	2219/39133 Convert teached program for fixed workpiece
2219/39092 Treat interference in hardware, circuit and also	to program for moving workpiece
in software 2219/39093 On collision, ann, bam, learns path on line,	2219/39134 Teach point, move workpiece, follow point
used next time for same command	with tip, place tip on next point 2219/39135 For multiple manipulators operating at same
2219/39094 Interference checking between robot and	time, avoid collision
fixture	2219/39136 Teach each manipulator independently or
2219/39095 Use neural geometric modeler, overlapping	dependently from each other
spheres 2219/39096 Self-collision, internal collison, collision	2219/39137 Manual teaching, set next point when tool touches other tool, workpiece
between links of one robot	2219/39138 Calculate path of robots from path of point on
2219/39097 Estimate own stop, brake time, then verify if in	gripped object
safe distance	2219/39139 Produce program of slave from path of master
2219/39098 • • • Estimate stop, brake distance in predef time, then verify if in safe distance	and desired relative position
2219/39099 Interlocks inserted in movement process if	2219/39141 Slave program has no taught positions, receives position from master, convert from master
necessary to avoid collision	2219/39142 Moving time between positions in slave
2219/39101 Cooperation with one or more rotating	program coordinated online with master
workpiece holders, manipulators	2219/39143 One program in robot controller for both robot
2219/39102 Manipulator cooperating with conveyor	and machine, press, mold
2219/39103 Multicooperating sensing modules2219/39104 Manipulator control orders conveyor to stop, to	2219/39144 Scale moving time of all robots, machines to match slowest, no waiting
visualize, pick up	2219/39145 Slave path is the same as master path and
2219/39105 Manipulator cooperates with moving machine,	superposed desired relative movement
like press brake	2219/39146 Swarm, multiagent, distributed multitask
2219/39106 Conveyor, pick up article, object from	fusion, cooperation multi robots
conveyor, bring to test unit, place it 2219/39107 • • • Pick up article, object, measure, test it during	2219/39147 Group transport, transfer object, ant problem
motion path, place it	2219/39148 To push or pull on objects, boxes 2219/39149 To assemble two objects, objects manipulation
2219/39108 Regrasp object as function of impact	2219/39151 Use intention inference, observe behaviour of
2219/39109 Dual arm, multiarm manipulation, object	other robots for their intention
handled in cooperation	2219/39152 Basic behaviour, avoid, follow, aggregate,
2219/39111 Use of flexibility or free joint in manipulator to	disperse, home, wander, grasp, drop
avoid large forces	

2219/39153 Human supervisory control of swarm	2219/39196 Use of passive joint, no actuator but brake,
2219/39154 Each robot can pick up an information carrier,	brake on or off
read and write it, exchange it	2219/39197 Passive compliance, no input of force
2219/39155 Motion skill, relate sensor data to certain	reference, mechanical resilience, spring
situation and motion	2219/39198 Manipulator used as workpiece handler and for
2219/39156 To machine together workpiece, desktop	machining operation
flexible manufacturing	2219/39199 Active vibration absorber
2219/39157 Collectively grasping object to be transported	2219/39201 Control of joint stiffness
2219/39158 Configuration description language, to define	2219/39202 Invariant inertia, constant inertia matrix
behaviour of system	independent of joint positions
2219/39159 Task modelling	2219/39203 Fuzzy petrinet controller
2219/39161 Search, grip object and bring to a home area,	2219/39204 Petrinet controller
gather object, object placement 2219/39162 Learn social rules, greedy robots become non-	2219/39205 Markov model
greedy, adapt to other robots	2219/39206 Joint space position control
2219/39163 Formation control, robots form a rigid	2219/39207 Manipulator is passive, gives operator only feedback of what is currently done
formation, fixed relationship	2219/39208 Robot is active, realizes planned trajectory by
2219/39164 Embodied evolution, evolutionary robots with	itself
basic ann learn by interactions with each other	2219/39209 Switch over from free space motion to
2219/39165 Evolution, best performing control strategy is	constraint motion
transmitted to other robots	2219/39211 If operator on platform moves in certain
2219/39166 Coordinate activity by sending pheromone	direction, arm will follow
messages between robots, no central control	2219/39212 Select between autonomous or teleoperation
2219/39167 Resources scheduling and balancing	control
2219/39168 Multiple robots searching an object	2219/39213 Distributed tasks, space motion, contact,
2219/39169 Redundant communication channels with	kinematic conditioning tasks
central control	2219/39214 Compensate tracking error by using model,
2219/39171 Vehicle moves towards arm if streched arm, away from it if folded, singular point	polynomial network 2219/39215 Adaptive control with stabilizing compensation
2219/39172 Vehicle, coordination between manipulator arm	2219/39216 Motion scaling
and its moving vehicle	2219/39217 Keep constant orientation of handled object
2219/39173 Dynamic interaction between vehicle and	while moving manipulator
manipulator	2219/39218 Force tracking
2219/39174 Add DOFs of mobility to DOFs of manipulator	2219/39219 Trajectory tracking
to add user defined tasks to motion	2219/39221 Control angular position of joint by length of
2219/39175 Cooperation between fixed manipulator and	linear actuator
manipulator on vehicle	2219/39222 Disturbance rejection, suppression
2219/39176 Compensation deflection arm	2219/39223 Resonance ratio control, between arm and
2219/39177 Compensation position working point as	motor
function of inclination tool, hand	2219/39224 Jacobian transpose control of force vector in
2219/39178 Compensation inertia arms	configuration and cartesian space
2219/39179 Of movement after lock stop by small movement against load, stop again	2219/39225 Rmfc resolved motion force control, apply
2219/39181 Compensation of coulomb friction in joint	known acceleration to payload mass 2219/39226 Operational space formulation, project model
2219/39182 Compensation for base, floor deformation	into cartesian coordinates
2219/39183 Compliance compensation	2219/39227 Configuration control, generate end effector
2219/39184 Forward compensation in robot world space,	forces to compensate dynamics
inverse in joint space	2219/39228 Computed torque method and H-compensation
2219/39185 ANN as compensator	2219/39229 Linear parameterization of robot dynamics
2219/39186 Flexible joint	2219/39231 Parameterization of inertia, coriolis and
2219/39187 Coriolis and centripetal compensation	centrifugal matrix
2219/39188 Torque compensation	2219/39232 Fuzzy adaptation of sliding mode controller
2219/39189 Compensate for dead weight of tool as function	2219/39233 Adaptive switching of multiple models, same
of inclination tool	model but different initial estimates, different
2219/39191 Compensation for errors in mechanical	robot model for different areas
components	2219/39234 Constraint accelerated feedback, distance
2219/39192 Compensate thermal effects, expansion of links	dependant sampling rate
2219/39193 Compensate movement before lock stop, by	2219/39235 Track surface without knowing surface geometry
small movement against load, gravity 2219/39194 Compensation gravity	2219/39236 Hybrid integrator back-stepping control,
2219/39194 Compensation gravity 2219/39195 Control, avoid oscillation, vibration due to low	cascaded motor and manipulator subsystems
	The state of the s
rigidity	2219/39237 Torque disturbance control

2219/39238 Trajectory feedforward and feedback to input ann, output a control function	2219/39281 Ann for compensation torque 2219/39282 FFW ann for torque command, adapt as
2219/39239 Control additional actuator in each flexible link	function of speed and detected speed
2219/39241 Force and vibration control	
	2219/39283 Ffw ann to compensate torque or speed 2219/39284 NSC neural servo controller
2219/39242 Velocity blending, change in a certain time from first to second velocity	
2219/39243 Adaptive trajectory tracking	2219/39285 From database find strategy and select corresponding neural servo controller
2219/39244 Generic motion control operations, primitive	2219/39286 Forward inverse, dynamics model, relaxation
skills each for special task	neural network model firm
2219/39245 Computed torque fuzzy controller	2219/39287 Position and speed error to fuzzy input, output
2219/39246 Control position and orientation of handled	corrected by ann as function of position
object	2219/39288 Track control with ann
2219/39247 Control speed, acceleration as function of load	2219/39289 Adaptive ann controller
and rate of fatigue	2219/39291 Fuzzy neural for adaptive force control
2219/39248 Visual servoing combined with inertial	2219/39292 Neural brain based controller based on
measurements	simplified model of vertebrate nervous system
2219/39249 Computed torque controller combined with ann	2219/39293 Ann parallel to pd, learn inverse dynamics and
compensating switch type controller	feedforward of torque signal
2219/39251 Autonomous distributed control, joint and link	2219/39294 Learn inverse dynamics, ffw decomposed ann
is a subsystem, communication intensive	adapted by pid
2219/39252 Autonomous distributed control, task	2219/39295 Learn position correction values to be added to
distributed into each subsystem, task space	reference values
2219/39253 Virtual arm, has end effector on any joint of	2219/39296 Learn inverse and forward model together
real manipulator	2219/39297 First learn inverse model, then fine tune with
2219/39254 Behaviour controller, robot have feelings,	ffw error learning
learns behaviour	2219/39298 Trajectory learning
2219/39255 Penalty invariance: distribute disturbance	2219/39299 Learn forward dynamics
equally over all joints, nodes	2219/39301 Learn feedforward control
2219/39256 Task space controller	2219/39302 Backpropagation end effector location error
2219/39257 Switch from task space to joint space controller	through the link equations
when close to singularity 2219/39258 Three objective attitude control	2219/39303 Feedback error learn inverse dynamics, felc use
2219/39259 GPS to control robotic arm	position reference and error
2219/39261 Calculate driving torque from dynamic model,	2219/39304 Feedback error learn inverse dynamics, use
computed torque method variant	actual position and error
2219/39262 Position joint to minimize energy in previous	2219/39305 Learn, detect kinematic contraints in a plane from displacement and force
joints, equilibrium point, attractor	2219/39306 Three networks, data to cartesian, cartesian to
2219/39263 Normal and overload operation modes, robot	joint angle, joint angle to control
speed or torque higher than nominal	2219/39307 Multiple ann, trajectory control net and force
2219/39264 Torque control using hardware designed for	control net
position control	2219/39308 Position control net, pcn combined with
2219/39265 Cutting force disturbances compensated by	velocity control net, vcn
accelerating a mass within tool head	2219/39309 Inverse dynamic network combined with time
2219/39266 Algorithm for control	scaling network for trajectory plan
2219/39267 Uncertainty estimation by the bounds	2219/39311 Multilayer, MNN, four layer perceptron,
2219/39268 Layer perceptron, drive torque from state	sigmoidal neural network
variables	2219/39312 Double neural network for tracking, slave
2219/39269 Neural adaptation followed by fuzzy correction	microprocessor for servo control
2219/39271 Ann artificial neural network, ffw-nn,	2219/39313 Ann for joint control, ann for trajectory
feedforward neural network	optimization
2219/39272 Course by expert rule based system to correct	2219/39314 Ann for identification, ann for convergence,
fine fuzzy system	ann for tracking control
2219/39273 Neural oscillator	2219/39315 Art ann classifier and input selector, bam ann to
2219/39274 CMAC cerebellar model articulation controller	retrieve collision free path
network	2219/39316 Two ann, second ann trained with calibration data to learn error first ann
2219/39275 Ann in parallel to known dynamics model to correct for unknown dynamics	2219/39317 Adapt weights MNN online, MNN as
2219/39276 FFW and PD and ANN for compensation	feedforward, maps inputs to joint torques
position error	2219/39318 Position loop ann and velocity loop ann and
2219/39277 Segmented tree ANN	force loop ann
2219/39278 Segmented the Artiv	2219/39319 • • • Force control, force as reference, active
ANN	compliance
2219/39279 Ann parallel with p controller	2219/39321 Force control as function of position of tool
1 1	

2219/39322 Force and position control	2219/39369 Host and robot controller and vision processing
2219/39323 Force and motion control	2219/39371 Host and robot controller
2219/39324 Force as function of distance from boundary,	2219/39372 Expert rule based system to correct parameters
border of grinding area	impedance controller
2219/39325 External force control, additional loop	2219/39373 Fuzzy for planning, fuzzy neural for adaptive
comparing forces corrects position	force control
2219/39326 Model compensates positions as function of	2219/39374 Ffw and ann combined to compensate torque
position to compensate force deformations	2219/39375 MMI to path planner to servo controller
2219/39327 Fuzzy adaptive force control	2219/39376 Hierarchical, learning, recognition and skill
2219/39328 Fuzzy pi force control	level and adaptation servo level
2219/39329 Adaptive force and position control	2219/39377 Task level supervisor and planner, organizer
2219/39331 Switch between position and force control by	and execution and path tracking
fuzzy logic	2219/39378 Control panel separated from power control of
2219/39332 Adaptive force control	articulations
2219/39333 Fuzzy adaptive force and position control,	2219/39379 Open architecture such as nasrem, ngc, dicam,
hybrid	saridis, chimera, gisc, utap, nomad, robline
2219/39334 Fuzzy reinforcement compliance control	2219/39381 Map task, application to behaviour, force
2219/39335 Independent joint control, decentralised	tracking, singularity to motion to actuator
2219/39336 Pd controller combined with disturbance	2219/39382 Level, organization and coordination or distribution of tasks and execution level
rejection at joint	
2219/39337 Pd controller combined with joint energy based	2219/39383 Supervisor communicates with several ion control agents
controller	2219/39384 Control unit near robot, control and teaching
2219/39338 Impedance control, also mechanical	panel in safe zone
2219/39339 Admittance control, admittance is tip speed- force	2219/39385 Hybrid control system with neural brain based
2219/39341 Sliding mode based impedance control	controller and classical ctrler
2219/39342 Adaptive impedance control	2219/39386 Cell configuration, selection and connection of
2219/39343 Force based impedance control	cell combinations
2219/39344 Cooperative impedance control, between	2219/39387 Reflex control, follow movement, track face,
fingers or arms	work, hand, visual servoing
2219/39345 Active compliance control, control tension of	2219/39388 Visual compliance, xy constraint is 2-D image,
spring with dc motor	z position controlled
2219/39346 Workspace impedance control	2219/39389 Laparoscopic surgery, camera on center of
2219/39347 Joint space impedance control	operated part, view around, scale
2219/39348 Generalized impedance control	2219/39391 Visual servoing, track end effector with camera
2219/39349 RCC remote center compliance device inserted	image feedback
between wrist and gripper	2219/39392 Dynamic pyramiding, change vision field to
2219/39351 Compensation ann for uncertain trajectory in	small area if high tracking speed, zoom
impedance control	2219/39393 Camera detects projected image, compare with
2219/39352 Feedback error learning, ffw ann compensates	reference image, position end effector 2219/39394 Compensate hand position with camera
torque, feedback from pd to ann	detected deviation, new end effector attitude
2219/39353 Joint space observer	2219/39395 Expectation based visual servoing, use of
2219/39354 Operation, work space observer	model
2219/39355 Observer, disturbance observer	2219/39396 Manipulator action on screen depends from
2219/39356 Fuzzy logic velocity observer, to estimate	displayed position on screen
velocity in joints	2219/39397 Map image error directly to robot movement,
2219/39357 Execute motion of path in minimum of time	position with relation to world, base not
2219/39358 Time optimal control along path for singular	needed, image based visual servoing
points, having velocity constraints	2219/39398 Convert hand to tool coordinates, derive
2219/39359 Tracking path, priority control for component	transform matrix
perpendicular to path	2219/39399 Convert position of old, teach to new, changed,
2219/39361 Minimize time-energy cost	actual tool by transform matrix
2219/39362 Adapth path of gripping point as function of position of cooperating machine	2219/39401 Machine tool coordinates to manipulator
2219/39363 Track circular path on inclined surface	coordinates
2219/39364 Path, correction of path in function of load	2219/39402 Transfer matrix for moving object and robot to
2219/39365 By using a cue, part of a stimulus to prompt an	absolute space, motion independent 2219/39403 Method, axial rotation of tool to make tool and
adapted reaction pattern	base coordinates parallel
2219/39366 SMC sensory motor coordination	2219/39404 Design of manipulator
2219/39367 Using a motion map, association between	
	7.7.19/39405 Develop inverse model of system with ann
visual position and joint position	2219/39405 Develop inverse model of system with ann 2219/39406 Obtain optimal parameters of model of system
visual position and joint position 2219/39368 Sensorimotor command layer, between task	2219/39406 Obtain optimal parameters of model of system

2219/39409 Design of gripper, hand	2219/39457 Tendon drive
2219/39411 Effect of scaling drive arms	2219/39458 Vehicle levitated, arm pushes to position
2219/39412 Diagnostic of robot, estimation of parameters	vehicle
2219/39413 Robot self diagnostics	2219/39459 Finger actuator, ac motor and harmonic gear
2219/39414 7-DOF	and encoder
2219/39415 Hyper redundant, infinite number of DOFs	2219/39461 Rotate arm in one direction, forearm in other
2219/39416 12-DOF	direction but double speed
2219/39417 6-DOF	2219/39462 Pneumatic actuator, imitates human muscle 2219/39463 Exercise treatment end effector, dexter cube
2219/39418 3-DOF	with various switches for tasks
2219/39419 4-DOF	2219/39464 Estimation of human hand impedance in
2219/39421 DOF is degree of freedom, 2-DOF	multijoint arm movements
2219/39422 7-DOF for arm and 6-DOF for end effector	2219/39465 Two fingers each with 2-DOF
2219/39423 5-DOF 2219/39424 16-DOF	2219/39466 Hand, gripper, end effector of manipulator
2219/39425 9-DOF	2219/39467 Select hand as function of geometric form of
2219/39426 10-DOF	hand
2219/39427 Panel on arm, hand of robot, controlled axis	2219/39468 Changeable hand, tool, code carrier, detector
2219/39428 Panel with special keys for robot programming,	2219/39469 Grip flexible, deformable plate, object and
like gripper, hand, wrist	manipulate it
2219/39429 Using graphic kinematic perspective entered	2219/39471 Push workpiece in order to grip it correctly 2219/39472 Braced manipulator, for fine positioning hand
and represented by keys	is resting on table
2219/39431 Keys represent function of gripper, open, close	2219/39473 Autonomous grasping, find, approach, grasp
2219/39432 Direct robot control, click on mouse on variety	object, sensory motor coordination
of display command buttons	2219/39474 Coordination of reaching and grasping
2219/39433 Enter a move file, robot will follow a series of instructions	2219/39475 Grasp slightly, rotate object between two
2219/39434 Each function key of pc corresponds to a	fingers by action of gravity
motor, jog each motor	2219/39476 Orient hand relative to object
2219/39435 Free movable unit has push buttons for other	2219/39477 Finger tracks moving light spot on object
than position, orientation control	2219/39478 Control force and posture of hand
2219/39436 Joystick mimics manipulator to provide spatial	2219/39479 Grip, release again to put object in correct position in tray, regrip and move
correspondance	2219/39481 Control distance finger from center, radius
2219/39437 Joystick with additional handle for wrist and	2219/39482 Control position of center of grip
gripper control 2219/39438 Direct programming at the console	2219/39483 Control angle of rotation
2219/39439 Joystick, handle, lever controls manipulator	2219/39484 Locate, reach and grasp, visual guided grasping
directly, manually by operator	2219/39485 Lift workpiece with two fingers, then grasp it
2219/39441 • • • Voice command, camera detects object, grasp,	with two additional fingers
move	2219/39486 Fingered hand, multifingered hand
2219/39442 Set manual a coordinate system by jog feed	2219/39487 Parallel jaws, two fingered hand
operation	2219/39488 Each finger gets 1-DOF, one more movement,
2219/39443 Portable, adapted to handpalm, with joystick,	translation or rotation
function keys, display 2219/39444 Display of position, of shape of robot and tool	2219/39489 Soft fingertip, electro rheological controlled fluid
2219/39445 Select between jog modes, user, robot	2219/39491 Each finger controlled by a controller
coordinates, tool, system feed, joint feed	2219/39492 Finger impedance control
2219/39446 Display of manipulator and workpiece and jog	2219/39493 Passive compliant finger, array of resilient rods
directions	in tip
2219/39447 Dead man switch	2219/39494 Each finger has 4-DOF
2219/39448 Same teach pendant connects to many robot	2219/39495 Active electromechanical compliance for each
controllers over network	finger
2219/39449 Pendant, pda displaying camera images	2219/39496 3-Fingered hand
overlayed with graphics, augmented reality	2219/39497 Each finger can be controlled independently
2219/39451 Augmented reality for robot programming 2219/39452 Select with mouse button a coordinate plane for	2219/39498 Each finger has force torque sensor in tip of finger
micromanipulation	2219/39499 4-Fingers with each 6-DOF
2219/39453 Select program as function of location of	2219/39501 5-Fingers with each 4-DOF
mobile manipulator	2219/39502 4-Fingers with each 3-DOF
2219/39454 Rubber actuator, two muscle drive, one for	2219/39503 4-Fingers with each 4-DOF
extension other for traction	2219/39504 Grip object in gravity center
2219/39455 Flexible microactuator, fluidic controlled fibre	2219/39505 Control of gripping, grasping, contacting force,
reinforced rubber, three tubes	force distribution
2219/39456 Direct drive	

2219/39506 Grip flexible wire at fixed base, move gripper to top of wire and grip	2219/39548 Enter interactively parameter for gripper, then teach movement
2219/39507 Control of slip motion	2219/39549 Structure, hand has connector for power supply
2219/39508 Reorientation of object, orient, regrasp object	and control signals
2219/39509 Gripping, grasping, links embrace, encircle, envelop object to grasp	2219/39551 Pivoting gripper, so part takes always vertical orientation
2219/39511 Reorient, rotate object in hand between fingers	2219/39552 Stewart platform hand, parallel structured hand
by action of fingers	2219/39553 • • • Dual gripper, two heads to pick up different objects
2219/39512 Whole hand manipulation, use of fingertips and hand surface	2219/39554 Gripper is formed by flexible tube, embraces
2219/39513 Tip prehension grasp, grasp with tip of fingers	object like a finger
2219/39514 Stability of grasped objects	2219/39555 Revolver with several grippers, hands
2219/39515 Grapple object, grip in compliant mode, self	2219/39556 Control system build into hand itself
alignment of fingers and object	2219/39557 Vacuum gripper using mask with pattern
2219/39516 Push align object against wall, detect each time	corresponding to workpiece to be lifted
distance from grip point to wall	2219/39558 Vacuum hand has selective gripper area
2219/39517 Control orientation and position of object in hand, roll between plates	2219/39559 Polyvalent gripper, to grip, assemble, manipulate
2219/39518 Rolling contact between fingers, robot arms and object	2219/39561 • • • Gripper with build in positioning device to align handled object
2219/39519 Concurrent grasp, all forces converge in one	2219/39562 Dual end effector, one as tool, the other as
point	workhandler, revolver
2219/39521 Pencil grasp, forces act in two points, along	2219/39563 Hand has a center pin to pick up coils
line of intersection of two planes	2219/39564 Spoon and fork, fork slides back if food
2219/39522 Regulus grasp, forces do not intersect at all	delivered in mouth
2219/39523 Set holding force as function of dimension,	2219/39565 Two fingered microhand, each finger is a
weight, shape, hardness, surface	parallel, stewart platform
2219/39524 Power grasp, between thumb and four fingers, acting as a virtual middle finger	2219/39566 Transparent gripper, object can always be seen by camera
2219/39525 Lateral grasp, between thumb and four fingers, acting as virtual index finger	2219/39567 Use electromagnetic attraction to bring robot hand in contact with workpiece
2219/39526 Three fingers used, thumb, index, middle finger	2219/39568 Extract, insert objects by controlling fingers,
for lateral precision	dexterous
2219/39527 Workpiece detector, sensor mounted in, near hand, gripper	2219/39569 Twirl baton, rotate cylinder through center perpendicular to length
2219/39528 Measuring, gripping force sensor build into	2219/39571 Grip, grasp non rigid material, piece of cloth
hand	2219/39572 Task, tool manipulation
2219/39529 Force, torque sensor in wrist, end effector	2219/39573 Tool guidance along path
2219/39531 Several different sensors integrated into hand	2219/39574 Passive compliant hand, wrist
2219/39532 Gripping force sensor build into finger	2219/39575 Wrist, flexible wrist
2219/39533 Measure grasping posture and pressure	2219/39576 Magnetically levitated wrist
distribution	2219/39577 Active electromechanical compliance for wrist
2219/39534 By positioning fingers, dimension of object can	2219/39578 Axis wrist
be measured	2219/40 • Robotics, robotics mapping to robotics vision
2219/39535 Measuring, test unit build into hand, end	2219/40001 Laser color indicates type of machining
effector	2219/40002 Camera, robot follows direction movement of
2219/39536 Planning of hand motion, grasping	operator head, helmet, headstick
2219/39537 First slide object on table in order to be able to	
grasp it, grasp it	2219/40003 Move end effector so that image center is
2219/39538 Rotate object with one or more fingers, while	shifted to desired position Window function only a specific region is
sliding on table	2219/40004 • • • Window function, only a specific region is analyzed
2219/39539 Plan hand shape	2219/40005 Vision, analyse image at one station during
2219/39541 Place fingers to reorient object while grasping	manipulation at next station
2219/39542 • • Plan grasp points, grip matrix and initial grasp	-
force	2219/40006 Placing, palletize, un palletize, paper roll placing, box stacking
2219/39543 Recognize object and plan hand shapes in grasping movements	2219/40007 Optimize sequence of pick and place operations upon arrival of workpiece on conveyor
2219/39544 Fuzzy dynamic programming, generate	2219/40008 Place a box, block in a corner
trajectory of finger during tracking	2219/40009 Remove and replace machine part, module
2219/39545 Trajectory generation for smoothly grasping moving object	2219/40011 • • • Lay down, laying non rigid material, handle flat textile material
2219/39546 Map human grasps to manipulator grasps	2219/40012 Pick and place by chain of three manipulators,
2219/39547 Program, plan gripping force, range and speed	handling part to each other

2219/40106 Feedback of online failures to offline learned knowledge base	2219/40146 Telepresence, teletaction, sensor feedback from slave to operator
2219/40107 Offline task learning knowledge base, static planner controls dynamic online	 2219/40147 Variable time delay, through internet 2219/40148 Predict locally machining forces from model to
2219/40108 Generating possible sequence of steps as function of timing and conflicts	control remote machine 2219/40149 Local intelligence for global planning, remote
2219/40109 Consider each part to be assembled as an agent,	intelligence for tuning
behaving autonomously 2219/40111 For assembly	2219/40151 Time delay, problems caused by time delay between local and remote
2219/40112 Using graph grammars and fuzzy logic	2219/40152 Deictic, using a sign language, point finger to
2219/40113 Task planning	reach, close hand to grasp
2219/40114 From vision detected initial and user given final state, generate tasks	2219/40153 Teleassistance, operator assists, controls autonomous robot
2219/40115 Translate goal to task program, use of expert	2219/40154 Moving of objects
system	2219/40155 Purpose is grasping objects
2219/40116 Learn by operator observation, symbiosis,	2219/40156 Input work program as well as timing schedule
show, watch 2219/40117 Virtual mecanism, like slider to constraint	2219/40157 Planning, event based planning, operator changes plans during execution
movement in task space	2219/40158 Correlate actual image at angle with image
2219/40118 Task oriented virtual tool, developed for task,	presented to operator without angle
assists operator in task 2219/40119 Virtual internal model, derive from forces on object, motion of end effector	2219/40159 Between operator and sensor a world modeler, local intelligence
2219/40121 Trajectory planning in virtual space	2219/40161 Visual display of machining, operation, remote viewing
2219/40122 Manipulate virtual object, for trajectory	2219/40162 Sound display of machining operation
planning of real object, haptic display	2219/40163 Measuring, predictive information feedback to
2219/40123 Indicate, select features on display, remote	operator
manipulator will execute	2219/40164 Fault recovery from task execution errors
2219/40124 During manipulator motion, sensor feedback to	2219/40165 Sensor data to display depends on robot status
adapt model in memory 2219/40125 Overlay real time stereo image of object on	2219/40166 Surface display, virtual object translated into real surface, movable rods
existing, stored memory image argos	2219/40167 Switch between simulated display of remote
2219/40126 Virtual landmarks, reference points for operator	site, and actual display
2219/40127 Virtual tape measure, indicate distance between end effector and destination	2219/40168 Simulated display of remote site, driven by operator interaction
2219/40128 Virtual tether, line on display connects end	2219/40169 Display of actual situation at the remote site
effector to destination point	2219/40171 Set a common coordinate system for all
2219/40129 Virtual graphic 3-D pointer, manipulator	remotely controlled robots
commands real manipulator	2219/40172 Stop command transmission if no feedback
2219/40131 Virtual reality control, programming of	signal received at remote site
manipulator 2219/40132 Haptic joystick with force feedback based on	2219/40173 Stop robot if no command received within
accelerometer included in joystick	interval 2210/40174 Report telegraphics through internet
2219/40133 Force sensation of slave converted to	2219/40174 Robot teleoperation through internet 2219/40175 Inclination, tilt of operator seat, chair serves as
movement of chair for operator 2219/40134 Force sensation of slave converted to vibration	control command, like handle 2219/40176 Encode operator actions into symbolic
for operator	commands for transmission to remote
2219/40135 Slave force converted to shape display,	2219/40177 Nanomanipulation
actuated by fingers, surface is force image	2219/40178 Distributed top, resource availability in
2219/40136 Stereo audio and vision	network
2219/40137 Force sensation feedback from simulated tool	2219/40179 Design of controller
2219/40138 Scaled feedback of forces from slave to master and master to slave	2219/40181 • • • Operator can fine position in small area, free, but if contact, force feedback
2219/40139 Force from slave converted to a digital display like fingers and object	2219/40182 Master has different configuration than slave manipulator
2219/40141 Pain sensation feedback, impinge air on,	2219/40183 Tele-machining
squeeze, vibrate, stimulate fingers 2219/40142 Temperature sensation, thermal feedback to	2219/40184 Compliant teleoperation, operator controls motion, system controls contact, force
operator fingers	2219/40185 Decoupled coarse fine motion coordination
2219/40143 Slip, texture sensation feedback, by vibration stimulation of fingers	2219/40186 Reachability control, permits slave to reach commanded position
2219/40144 Force sensation feedback from slave	2219/40187 Indexed position control, master controls only
2219/40145 Force sensation of slave converted to audio signal for operator	small part of slave space

2219/40188 Position control with scaling, master small movement, slave large movement	2219/40228 If deviation of compliant tool is too large, stop and alarm
2219/40189 Modes, coarse by rate controller, fine by position controller	2219/40229 Analytical redundancy, use available funcional redundancy of model
2219/40191 • • • Autonomous manipulation, computer assists operator during manipulation	2219/40231 • • • Safety, dual clutched freewheel for joint, if error no movement possible
2219/40192 • • • Control modes, velocity for coarse, position for fine, hand for gripper	2219/40232 Lock mechanical arm if servo, cpu error, other arms remain free
2219/40193 • • • Micromanipulation	2219/40233 Portable robot
2219/40194 Force reflective, impedance shaping tele operation	2219/40234 Snake arm, flexi-digit robotic manipulator, a hand at each end
2219/40195 Tele-operation, computer assisted manual operation	2219/40235 Parallel robot, structure 2219/40236 With opposing actuators on same joint, agonist,
2219/40196 Projecting light on floor to delimit danger zone around robot	flexor, muscle
2219/40197 • • • Suppress, execute command depending on	2219/40237 Bus for communication with sensors
physical position of control panel	2219/40238 Dual arm robot, one picks up one part from conveyor as other places other part in machine
2219/40198 Contact with human allowed if under pain tolerance limit	2219/40239 Common control box for several robot control boards and additional control boards
2219/40199 Soft material covers links, arms for shock and pain attenuation	2219/40241 Underactuated robot, has less actuators than number of DOF
2219/40201 Detect contact, collision with human	2219/40242 End effector with motor to provide a yaw, roll
2219/40202 Human robot coexistence	and pitch motion
2219/40203 Detect position of operator, create non material	2219/40243 Global positioning robot
barrier to protect operator	2219/40244 Walking manipulator with integrated stewart,
2219/40204 Each fault condition has a different recovery	parallel arm
procedure	2219/40245 Gripper on crawling device, smaller than two
2219/40205 Multiple arm systems	cm
2219/40206 Redundant serial manipulators, kinematic fault tolerance	2219/40246 6-DOF 3-ppsp parallel manipulator
2219/40207 • • • Parallel structured modules, more joints than	2219/40247 Series manipulator mounted on parallel manipulator
DOF	2219/40248 Manipulator on slide
2219/40208 Dual redundant actuators	2219/40249 Whole arm manipulator, grip object not with
2219/40209 If speed is important processors execute each different code, otherwise same code	end effector but with all links
2219/40211 • • Fault tolerant, if one joint, actuator fails, others	2219/40251 Ghdrs generalized high dimensional robotic system, virtual decomposition
take over, reconfiguration	2219/40252 Robot on track, rail moves only back and forth
2219/40212 Two-way clutch for joint, prevents movement	2219/40253 • • • Soft arm robot, light, rubber, very compliant
in unallowable direction	2219/40254 Serial to parallel, branching manipulator, one
2219/40213 • • • Record history, log of instructions sent from task planner to path planner	macro and several parallel arms 2219/40255 End effector attached to cable for gravity
2219/40214 Command rejection module	balance suspension
2219/40215 Limit link kinetic energy to amount another	2219/40256 Large, heavy manipulator
element can dissipate upon impact	2219/40257 Flexible macro manipulator with rigid attached
2219/40216 Record image of working robot; display to detect errors	micromanipulator 2219/40258 Robot can be fixed in orientation and height to
2219/40217 Individual emergency stop lines for each part of	ground, plurality of such points
system	2219/40259 Set friction in each joint to optimal value
2219/40218 Check conditions before allowing unlocking of joint brake	2219/40261 Self reproducing, replicating fabrication machine, tools, structure, info for this
2219/40219 Detect contact, proximity of other manipulators	2219/40262 Two link arm with a free, attached to base, and
2219/40221 Individual and common power cutoff switch	an active joint between links
for several robots	2219/40263 Dual use mobile detachable manipulator
2219/40222 Lock arm if somebody is looking into the hand	2219/40264 Human like, type robot arm
2219/40223 • • • If insertion force to high, alarm, stop for operator assistance	2219/40265 Use of inflatable links, can easily be folded, compressed air for stiffness
2219/40224 • • • If robot gets a return signal, go to initial condition position	2219/40266 Resonant manipulator, springs cooperate with latches, motor only for lost energy
2219/40225 During start up, control robot with low speed,	2219/40267 Parallel manipulator, end effector connected to

2219/41038 Compensation pulses	2219/41082 Timer, speed integration to control duration of
2219/41039 Change compensation slowly, gradually,	backlash correction
smooth error with filter	2219/41083 Upon reversing direction, lower, change gain
2219/41041 Compensation pulses as function of direction	2219/41084 Compensation speed axis with changing,
movement	reversing direction, quadrant circle

2219/41085 Compensation pulses on inversion of direction of rotation, movement of position of a better positioning on better positioning on the position of interser position on linearity of system of a better positioning on better positioning on better positioning on better position on linearity of system of better positioning on better positioning on better position on linearity of setter positioning on better position on linearity of pot compensation on linearity of setter positioning on better positioning on better position on linearity and better positioning on better position on linearity of pot compensation on linearity of setter positioning on better position on linearity of setter positioning of compensation on linearity and better positioning of compensation on linearity and better position on linearity and better
2219/41086 Bang bang control 2219/41087 Determine switch point 2219/41088 If error too large, switch over to signal identification and servo correction 2219/41089 Align, calibrate control so that one pulse or signal represents certain movement 2219/41091 Alignment, zeroing, nulling, set parallel to axis 2219/41092 References, calibration positions for correction of value position counter 2219/41093 By injection of sinusoidal signal, superposed on reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration by going to two extremes, limits, counting pulses, storing values 2219/41091 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41103 One comparator on certain excitation position, speed, acceleration 2219/41103 Motor ripple compensation nender transfer function 2219/41133 Compensates output of pd controller 2219/41135 Avoid stray pulses, jitter, use two d-flipflops, or integrate pulse duration 2219/41136 Compensation of position for slip of ac motor 2219/41137 Torque compensation of relevitation excludated with position, speed, torque deflection values 2219/41109 Compensation of servo compensate dynamic deflection of slide, calculated with position, speed, torque deflection values 2219/41109 Compensation of servo compensation of servo compensation of changing supply voltage 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41109 Compensation of dynamic characteristic of actuator 2219/41109 Element used such as low pass filter to cut resonance at non needed regions 2219/41101 Exponential
2219/41087 Determine switch point 2219/41088
2219/41089 If error too large, switch over to signal identification and servo correction 2219/41089 Align, calibrate control so that one pulse or signal represents certain movement 2219/41091 Alignment, zeroing, nulling, set parallel to axis 2219/41092 References, calibration positions for correction of value position counter 2219/41093 By injection of sinusoidal signal, superposed on reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/4109 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator to signal servo correction and servo correction or signal represents certain movement 2219/41103 Anno compensates output of pd controller 2219/41135 Avoid stray pulses, jitter, use two d-flipflops, or integrate pulse duration 2219/41136 Compensation of position for slip of ac motor 2219/41137 Torque compensation 2219/41138 Torque compensation 2219/41138 Torque compensation 2219/41138 Torque compensation 2219/41139 Compensate duration 2219/41141 Position error compensation as function of speed to compensate detection delay 2219/41141 Position error compensation of servocontrol signals as function of changing supply voltage 2219/41140 Compensation of dynamic characteristic of actuator 2219/41140 Compensation of servocontrol signals as function of changing supply voltage 2219/41140 Element used such as low pass filter to cut resonance at non needed regions 2219/41140 Digital filter for compensation of servo loop phase, after sensing a reference 2219/41148 Model, from positio
identification and servo correction 2219/41089 . Align, calibrate control so that one pulse or signal represents certain movement 2219/41091 . Alignment, zeroing, nulling, set parallel to axis 2219/41092 . References, calibration positions for correction of value position counter 2219/41093 . By injection of sinusoidal signal, superposed on reference 2219/41094 . Removable interferometer, store exact position, needed drive current, temperature 2219/41095 . References, calibration positions to adapt gain of servo 2219/41096 . For several positions store dead zone in memory 2219/41097 . Align stepping motor with driven valve 2219/41098 . Automatic recalibration 2219/4109 . Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 . Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41103 . One comparator on certain of step or or correction of signal sand to signal stepping motor with driven valve and the step of the speed and position of speed and position. 2219/41102 . Analog comparator 2219/41103 . One comparator for both speed and position 2219/41104 . Annoncompensates output of pd controller 2219/41135 . Avoid stray pulses, jitter, use two d-flipflops, or integrate pulse duration 2219/41136 . Compensation of position for slip of ac motor 2219/41137 . Torque compensation of levitation effect of motor 2219/41138 . Torque compensation of slide, calculated with position, speed, torque deflection values 2219/41139 . Compensate dynamic deflection of slide, calculated with position, speed, torque deflection values 2219/41141 . Position error compensation of servocontrol signals as function of changing supply voltage 2219/41142 . Compensation of dynamic characteristic of actuator 2219/41144 . Element used such as low pass filter to cut resonance at non needed regions 2219/41104 . Eaponential filter 2219/41105 . Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41104 . Analog comparator 2219
2219/41091 Align, calibrate control so that one pulse or signal represents certain movement 2219/41091 Alignment, zeroing, nulling, set parallel to axis 2219/41092 References, calibration positions for correction of value position counter 2219/41093 By injection of sinusoidal signal, superposed on reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/4109 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41141 Avoid stray pulses, jitter, use two d-flipflops, or integrate pulse duration 2219/41136 Compensation of position for slip of ac motor 2219/41137 Torque compensation for levitation effect of motor 2219/41138 Torque compensation of servotometrestic of actual deflection of slide, calculated with position, speed, torque deflection values 2219/41139 Compensate dynamic deflection of slide, calculated with position, speed, torque deflection values 2219/41141 Position error compensation as function of speed to compensation of servocontrol signals as function of changing supply voltage 2219/41142 Compensation of dynamic characteristic of actuator 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41140 Eagli filter for compensation of servo loop phase, after sensing a reference 2219/41141 Exponential filter 2219/41148 Model, from position, speed, acceleration
signal represents certain movement 2219/41091 Alignment, zeroing, nulling, set parallel to axis 2219/41092 References, calibration positions for correction of value position counter 2219/41093 By injection of sinusoidal signal, superposed on reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, acceleration 2219/41148 Model, from position, speed, acceleration
2219/41091 Alignment, zeroing, nulling, set parallel to axis 2219/41092 References, calibration positions for correction of value position counter 2219/41093 By injection of sinusoidal signal, superposed on reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41141 Compensation of position for slip of ac motor 2219/41137 Torque compensation 2219/41138 Torque compensation 2219/41139 Compensate dynamic deflection of slide, calculated with position, speed, torque deflection values 2219/41141 Position error compensation as function of speed to compensate detection delay 2219/41141 Compensation of servocontrol signals as function of changing supply voltage 2219/41142 Compensation of dynamic characteristic of actuator 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41161 Digital filter for compensation of servo loop phase, after sensing a reference 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41104 Exponential filter 2219/41105 Model, from position, speed, acceleration
2219/41092 References, calibration positions for correction of value position counter 2219/41093 By injection of sinusoidal signal, superposed on reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 Torque compensation for levitation effect of motor 2219/41137 Torque compensation 2219/41138 Torque compensation 2219/41139 Compensate dynamic deflection of slide, calculated with position, speed, torque deflection values 2219/41141 Position error compensation as function of serve compensation of servocontrol signals as function of changing supply voltage 2219/41142 Compensation of dynamic characteristic of actuator 2219/41104 Element used such as low pass filter to cut resonance at non needed regions 2219/41104 Digital filter for compensation of servo loop phase, after sensing a reference 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 Digital filter for compensation of servo loop phase, after sensing a reference 2219/41104 Exponential filter 2219/41105 Model, from position, speed, acceleration
of value position counter 2219/41093 By injection of sinusoidal signal, superposed on reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, acceleration 2219/41148 Model, from position, speed, acceleration
2219/41093 By injection of sinusoidal signal, superposed on reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41103 One comparator for both speed and position 2219/41148
reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41108 Compensate dynamic deflection of slide, calculated with position, speed, torque deflection values 2219/41141 Position error compensation as function of speed to compensate detection delay 2219/41142 Compensation of servocontrol signals as function of changing supply voltage 2219/41142 Compensation of dynamic characteristic of actuator 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41145 Digital filter for compensation of servo loop phase, after sensing a reference 2219/41147 Exponential filter 2219/41108 One comparator
reference 2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41108
2219/41094 Removable interferometer, store exact position, needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, torque deflection values 2219/41141 Position error compensation as function of speed to compensation of servocontrol signals as function of changing supply voltage 2219/41142
needed drive current, temperature 2219/41095 References, calibration positions to adapt gain of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/4114 Position error compensation as function of speed to compensate detection delay 2219/4114 Compensation of servocontrol signals as function of changing supply voltage 2219/4114 Compensation of dynamic characteristic of actuator 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41145 Digital filter for compensation of servo loop phase, after sensing a reference 2219/41101 Analog comparator 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position
of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position speed to compensate detection delay 2219/41142 Compensation of servocontrol signals as function of changing supply voltage 2219/41143 Compensation of dynamic characteristic of actuator 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41145 Digital filter for compensation of servo loop 2219/41146 Kalman filter 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position
of servo 2219/41096 For several positions store dead zone in memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position speed to compensate detection delay 2219/41142 Compensation of servocontrol signals as function of changing supply voltage 2219/41143 Compensation of dynamic characteristic of actuator 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41145 Digital filter for compensation of servo loop 2219/41146 Kalman filter 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position
2219/41096 For several positions store dead zone in memory
memory 2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position memory function of changing supply voltage 2219/41143 Compensation of dynamic characteristic of actuator actuator 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41145 Digital filter for compensation of servo loop 2219/41146 Kalman filter 2219/41147 Exponential filter 2219/41148 Model, from position, speed, acceleration
2219/41097 Align stepping motor with driven valve 2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41148 Compensation of dynamic characteristic of actuator 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41145 Digital filter for compensation of servo loop 2219/41146 Kalman filter 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position
2219/41098 Automatic recalibration 2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position actuator 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41145 Digital filter for compensation of servo loop 2219/41146 Kalman filter 2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, acceleration
2219/41099 Calibration by going to two extremes, limits, counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41144 Element used such as low pass filter to cut resonance at non needed regions 2219/41145 Digital filter for compensation of servo loop 2219/41146 Kalman filter 2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, acceleration
counting pulses, storing values 2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, acceleration
2219/41101 Stop, halt step, ac motor on certain excitation phase, after sensing a reference 2219/41102 Analog comparator 2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, acceleration
phase, after sensing a reference 2219/41146 Kalman filter 2219/41102 Analog comparator 2219/41147 Exponential filter 2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, acceleration
2219/41102 Analog comparator 2219/41147 Exponential filter 2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, acceleration
2219/41103 One comparator for both speed and position 2219/41148 Model, from position, speed, acceleration
derive compensation
2219/41104 Start fine position after coarse position stopped 2219/41149 Zero phase filter
2219/41105 Coarse fine 2219/41151 Finite impulse response filter
2219/41106 Coarse fine take over, transition, switch over 2219/41152 Adaptive filter

2217/12002	other axis	2219/42125	Switch from pi to p or to pd-controller
2219/42083	Position, speed and force feedback		Bumpless, smooth transfer between two control
	Hybrid, analog loop, reference compensated by		modes
	digital loop	2219/42127	Timing, switch over on detection of marker on
2219/42085	Error between reference model and controller		spindle
	compensated with fuzzy controller	2219/42128	Servo characteristics, drive parameters, during
	Position, speed and deflection feedback	2210/42120	test move
	Speed and force loop	2219/42129	Teach, learn position table, model, for each reference a motor control output
	I parallel to non linear controller	2210//2131	Speed model created by entering estimated
	Quick but coarse loop and slow but fine loop, dexterity		speed at references
2219/42091	Loop combinations, add a second loop, cascade control		Correct, modify position table, model if detected error too large
2219/42092	Position and force control loop together	2219/42133	Position references as function of time,
	Position and current, torque control loop		correlated speed, acceleration in memory,
	Speed then pressure or force loop	2210/42124	signature
	First closed loop, then open loop	2219/42134	Fuzzy logic tuning of controller as function of error
2219/42096	Add, substract i part of speed feedback as function of sign speed error	2219/42135	Fuzzy model reference learning controller,
2219/42097	Dual mode servo, slow and precise, quick and	2210/42126	synthesis, tune rule base automatically
	coarse movement		Fuzzy feedback adapts parameters model Automatic tune fuzzy controller
2219/42098	First open, then closed loop to correct setpoint		Network tunes controller
2210/42000	of open loop		Tune fuzzy controller by three attributes: rise
	Slow coarse loop followed by fine quick loop Coarse position with microprocessor, fine with	221)/ (213)	time, overshoot, settling time
2219/42101 • • •	hardware centering, tracking	2219/42141	Filter error learning
2219/42102	Coarse 8-bit positioning in closed loop, fine 10-		Fuzzy control learning of starting friction
2217/42102	bit in open loop		coefficient
2219/42103	Switch from pi, if large error to disturbance	2219/42143	offline optimization of fuzzy controller
	mode control if small error		Online tuning of fuzzy controller by ann
2219/42104	Loop switch, speed loop then position loop, mode switch	2219/42145	Coarse tune with genetic algorithm, fine with gradient descent, hill climbing
2219/42105	Switch from pid to bang-bang to energy	2219/42146	In each position, upper, lower drive current needed to move more, less, store mean
2210/42106	dissipation as function of speed, error Speed regulation starts only in braking range,	2219/42147	Tune with genetic algorithm
2217/42100	less processor time needed		Position references as function of time,
2219/42107	Always position loop, first open loop for speed,		correlated noise, temperature in memory
	then also closed loop speed	2219/42149	During learning relation between control and
2219/42108	Open loop for positioning, closed loop for		controlled signal, open loop
	calibration	2219/42151	Learn dynamics of servomotor system by ann

2219/42152 Learn, self, auto tuning, calibrating, environment adaptation, repetition	2219/42196 Follow dynamically contour warped surface with tool
2219/42153 Inverse dynamics model idm, computed torque method	2219/42197 Brake as function of machining load, to keep total load on tool constant, avoid oscillation
2219/42154 Model itself controlled by position and speed loop	2219/42198 Step motor driven by step size and step duration data
2219/42155 Model	2219/42199 Fine position with gauge, coarse with limit
2219/42156 Forward dynamics model fdm	switch, transducer
2219/42157 Reference model uses only output and input	2219/42201 Deriving speed from commanded position
measurements	2219/42202 Square of distance
2219/42158 Fuzzy model of cutting process of milling	2219/42203 Using a counter and a limit switch
machine	2219/42204 Absolute positions
2219/42159 ARMA, AR autoregressive for poles, MA moving average model for zeros, in	2219/42205 With potentiometer
combination	2219/42206 Block, stop pulses in one axis, not in other axis
2219/42161 One model for load, one model for motor	2219/42207 Generate points between start and end position,
inertia	linear interpolation
2219/42162 Model reference adaptive control MRAC,	2219/42208 Set position of proximity switch
correction fictive-real error, position	2219/42209 Two slides, fine and quick, coarse and slow,
2219/42163 Simulator	piggyback, multirate positioner
2219/42164 Compensation of integration time of model	2219/42211 Command position by time value, proportional
2219/42165 Compensation of integration time of model	to total displacement
for model 2219/42166 Criterium is minimum jerk	2219/42212 Rotation over, selection of smallest, shortest angle, distance
	2219/42213 Position overshoot, axis still moves after stop
2219/42167 Minimum torque change	2219/42214 Near desired position, control actuator by pulse
2219/42168 Measuring of needed force for servo	in each clock, otherwise continuously
2219/42169 Decoder	2219/42215 Stop machine in a predetermined position
2219/42171 Velocity profile, variable gain, multiplication factors, rom ram	2219/42216 Changing position range, stroke, between closed and fully open
2219/42172 Special code	2219/42217 Time optimal position control
2219/42173 Acceleration deceleration	2219/42218 Coarse and fine position control combined,
2219/42174 Memory with position profile and force limits	each by ann
2219/42175 Velocity, speed points, profile and corresponding acceleration, delta v	2219/42219 Slow positioning with low pass, concurrent quick with high pass part of command
2219/42176 Motion profile	2219/42221 Control position by equilibrium between spring
2219/42177 Configuration memory for step motor	and actuator force
2219/42178 Reduce cable connection by pre-memorized positions	2219/42222 Compare reflected image from object with reference image, adjust object
2219/42179 Normalize velocity profile, calculate real velocity from additional parameters	2219/42223 Number and frequency of pwm signals define mean position in time
2219/42181 Rom contains sin and cos table to drive step	2219/42224 Process received reference to adapt it to range
motor	of servo
2219/42182 Memory is Rom for servo control	2219/42225 Coarse and fine position control combined, added, superposed
2219/42183 Memory is Ram	2219/42226 If deviation, return to desired position after a
2219/42184 Master slave with feedforward for	delay if within position range
compensation of contour error	2219/42227 Using incremental control actuator
2219/42185 Master slave with contour controller	2219/42228 Stop motor where torque will be maximum
2219/42186 Master slave, motion proportional to axis	2219/42229 Shot infoor where torque will be maximum 2219/42229 Shut off control, system, power on detection of
2219/42187 Position mirror, axis, display, back of seat as function of position of seat, other axis	zero or neutral position
2219/42188 Slave controlled as function of reference and actual position and derived speed of master	2219/42231 Detent, stop lock, current through motor in stop, locked, hold, blocked position
2219/42189 Motion look up table as function of cam angle	2219/42232 Select, switch between long, extended and
2219/42191 Adjust proportionality factor to optimize slave axis movement	short range to position 2219/42233 Pwm signal to low pass filter, compared to
2219/42192 Each axis drive has own queue of commands,	feedback position, if equal stop motor
executed in synchronism	2219/42234 Regression ann to map position error to pulse
2219/42193 Select between limit switches as function of	width
current position and destination	2219/42235 Adaptive pulsing, augment time duration until
2219/42194 Derive position from command speed, integrate	movement detected
speed	2219/42236 Use of a certain number of ac periods
2219/42195 Position a stop, move workpiece against stop to	2219/42237 Pwm pulse width modulation, pulse to position
cut stock, bar	modulation ppm

2219/42238 Control motor position with direction signal and pwm signal for position	2219/42279 Allow temporary motor overload if temperature still under maximum, heat inertia
2219/42239 Adaptive pulsing, take into account next cycle, command	2219/42281 If estimated temperature rise of motor is too high, inhibit motor
2219/42241 Select minimum value of two reference values	2219/42282 If displacement rate of actuator exceeds limit,
2219/42242 Reference generator for position	lower it
2219/42243 Enter velocity in reference generator, delivers	2219/42283 Motor only actuated if hardware and software
position signals	permission and control signal together
2219/42244 Enter acceleration, jerk, generator outputs	2219/42284 Stop and brake motor
acceleration, speed, position by integration	2219/42285 Stop axis contour controlled
2219/42245 Reference generates upper and lower range	2219/42286 Speed, ramp controlled slow down of motor
value at both sides of reference	2219/42287 On feedback failure, use profile stored in
	memory during learning
2219/42246 Add compensation to reference value 2219/42247 Remote reference transmitted to servo	2219/42288 Limit, stop drive current if axis obstructed,
	blocked, force against stop
2219/42248 Command reference limited, clipped, only	2219/42289 Avoid overload servo motor, actuator limit
between upper and lower values	
2219/42249 Relative positioning	servo torque
2219/42251 Control position of beam in coordination with	2219/42291 Regenerate faulty feedback by last
xy slide	measurement after detection excess error
2219/42252 Position beam to keep centerline	2219/42292 If speed detection fails, regenerate speed from
2219/42253 Double resolution for one pulse of computer	position signal
2219/42254 Resolution one axis different from resolution other axis	2219/42293 Regenerate faulty feedback by using previous value, substitute
2219/42255 Acceleration, deceleration time is a multiple of sampling time	2219/42294 Software monitoring of time delay of feedback pulses, feedback failure
2219/42256 Sampling the signal	2219/42295 Detect augmenting torque of drive motor
2219/42257 Sampling time in fixed relation to timer	2219/42296 Detect diminishing torque of drive motor,
interrupt	below low limit
2219/42258 Two sampling frequencies, for online	2219/42297 Detect phase lag of driving motor
measurements, for offline calculations	2219/42298 Measure backlash, time difference between
2219/42259 Variable sampling rate as function of thermal	point A to point B and from B to A, if too large
displacement	2219/42299 Measure current during first acceleration
2219/42261 Two sampling frequencies, one for motion, one	command
for stillstand	2219/42301 Detect correct connection of servomotor to
2219/42262 Variable sampling rate as function of position	powersupply
error	2219/42302 Detect insufficient acceleration, diminishing
2219/42263 Different sample rates, multiple sample rates	speed
for the different loops	2219/42303 Detect no speeding up of motor
2219/42264 Slow down sampling if power down is detected	2219/42304 Load, torque threshold as function of speed
2219/42265 Sampling rate for sending reference values	2219/42305 Detect loss of pulse step motor
equals interpolation rate	2219/42306 Excess in error, compare reference with
2219/42266 Variable sampling rate, slow at low velocity	
	feedback
2219/42267 Stability analysis	2219/42307 Compare actual feedback with predicted,
2219/42267 Stability analysis 2219/42268 Safety, excess in error	2219/42307 Compare actual feedback with predicted, simulated value to detect run away

2219/42321 Wrong direction or sign of measured value, eventually stop	2219/43016 Acceleration, deceleration as function of feed rate override
2219/42322 Emit dummy pulses, detect loss of pulses, feedback failure, wire brake, short	2219/43017 Acceleration is larger than deceleration to compensate for friction
2219/42323 Detect wire break, short circuit of feedback	2219/43018 Compensation, correction of acceleration,
2219/42324 Axis breaking, between motor and slide, table	deceleration time
2219/42325 Stalling of drive motor, overload	2219/43019 Compensate acceleration for sudden change in
2219/42326 Protection servo for saturation of amplifier	load, shockless
2219/42327 Detect ballscrew wear	2219/43021 At several positions detect acceleration error,
2219/42328 Detect bearing, clamp wear	compensate for it
2219/42329 Defective measurement, sensor failure	2219/43022 Compensate for friction as function of position
2219/42331 Bad parameter configuration for spindle, gear	2219/43023 Switch from acceleration to deceleration if mid
ratio, encoder resolution	stroke speed not reached
2219/42332 Detect failure of servo controller	2219/43024 Parabolic velocity profile, linear acceleration,
2219/42333 Synchronization by opposite correction for both	keep energy dissipation minimal
axis	2219/43025 Acceleration, deceleration is polynomial,
2219/42334 Synchronous tracking servo for biaxial	derivative is zero on stop position
positioning tables, contouring	2219/43026 Predict deceleration start from measured
2219/42335 If one slave axis out of synchronisation,	characteristics and actual performance
synchronise all other axes to that one	2219/43027 Parabolic acceleration, deceleration trajectory
2219/42336 To synchronize axis, adapt gain of each axis as	at start, stop
function of max, min, average gain	2219/43028 Switching points for trapezoidal form are stored in memory
2219/42337 Tracking control	2219/43029 Acceleration larger than deceleration for safe
2219/42338 Position tracking control	stopping at slow speed
2219/42339 Speed tracking control	2219/43031 Feed speed reduction dependent on tool surface
2219/42341 Force tracking control	2219/43032 Non symmetric acceleration profile
2219/42342 Path, trajectory tracking control	2219/43033 Sinusoidal acceleration profile
2219/42343 Optimum, adaptive sliding mode controller	2219/43034 Form of profile, ramp, trapezoid, S-curve,
2219/42344 Chattering alleviation control, chattering about	exponential
switching surface	2219/43035 Vertical start and stop phase
2219/42345 VSTC variable structure tracking control	2219/43036 Velocity profile with given starting and
2219/42346 Fuzzy sliding mode control fsmc	stopping speed vector
2219/42347 Switch to a saturation control signal if deviation from switch line is too large	2219/43037 Position, speed as function of position is
2219/42348 Slimsoc sliding mode self organizing controller	trapezoid
2219/42349 Sliding mode control with perturbation	2219/43038 Parabolic acceleration, constant speed, parabolic deceleration as function of position
estimation smcpe	2219/43039 • • • Time, exponential acceleration, constant speed,
2219/42351 PIVSC proportional integral compensated vsc	exponential deceleration as function of time
2219/42352 Sliding mode controller SMC, select other gain	2219/43041 Prediction, look ahead deceleration control,
2219/42353 Variable structure system, control VSS VSC	calculate start deceleration
2219/43 Speed, acceleration, deceleration control ADC	2219/43042 Convolution of speed curve with torque curve
2219/43001 • • • Speed, feed, infeed, acceleration, stopping	2219/43043 Normal and maximum deceleration mode,
problems	switch as function of position deviation, error
2219/43002 Acceleration, deceleration for forward,	2219/43044 Drive and brake alternative to decelerate and
backward reciprocating movement	stop
2219/43003 Acceleration deceleration in presence of	2219/43045 Max torque, acceleration, then variable, then
backlash, dynamic backlash	reverse, variable then max deceleration
2219/43004 Decelerate to follow desired velocity	2219/43046 Determine time constant from command speed
2219/43005 Corner distance variables to keep path when	and needed max acceleration torque
programmed speed changes	2219/43047 If speed below reference, small acceleration, if
2219/43006 Acceleration, deceleration control	above, large deceleration
2219/43007 Acceleration from rest 2219/43008 Deceleration and stopping	2219/43048 Step change in reference, soft start, smoothing
2219/43009 Acceleration deceleration for each block of	reference
data, segment	2219/43049 Digital convolution for velocity profile, also successive convolution
2219/43011 Shorter time by adjusting corner speed, avoid zero speed when engage corner	2219/43051 Translate generic motion description into acceleration profiles
2219/43012 Profile is defined by series of bits, for each	2219/43052 Set for each block time constant and speed
actuator, sensor	target
2219/43013 Ramp signal from division of sum of registers	2219/43053 Slow acceleration, rapid deceleration
2219/43014 Calculate inertia ratio from full acceleration	2219/43054 Take up gear backlash during deceleration
and full deceleration trial	2219/43055 Same acceleration deceleration pattern for
2219/43015 Calculate square root x	position and velocity loop
	- * *

2219/43056 Asynchronous acceleration between slow, fast	2219/43098 Change ADC time constant during start and
axes, rotational, linear axes	end of interpolation
2219/43057 Adjust acceleration, speed until maximum allowable moment for axis	2219/43099 Select acceleration deceleration time constants as function of weight, load, position
2219/43058 Limitation of acceleration, permissible, tolerable acceleration	2219/43101 Change time constants acceleration, deceleration as function of feed rate override
2219/43059 Accelerate, decelerate all axis as function of max, min, average speed axis	2219/43102 Time constant acceleration, deceleration as function of machining conditions
2219/43061 Maximum acceleration deceleration lookup table as function of distance	2219/43103 Switch adc time constants as function of type of axis, spindle feed or position axis
2219/43062 Maximum acceleration, limit	2219/43104 Minimize time constant based on operation
2219/43063 Acceleration deceleration as function of	program
maximum allowable speed	2219/43105 ADC time constants as function of type of axis
2219/43064 Brake, decelerate at least one axis at maximum	rotational or linear
2219/43065 Limitation of jerk	2219/43106 Time constant acceleration, deceleration as
2219/43066 Max centrifugal acceleration, especially for	function of temperature of motor
cmm	2219/43107 Correction acceleration and deceleration as function of speed, time constants in rom
2219/43067 Reach maximum speed at zero acceleration	2219/43108 Delay stop command as function of error
2219/43068 Adapt acceleration as function of load, developed heat in motor	between reference and multiple of increments
2219/43069 Measure acceleration, derive limit torque, adapt acceleration	2219/43109 Adaptive stopping with correction for both directions
2219/43071 Open closing acceleration deceleration control	2219/43111 Measure time needed from first to second
2219/43072 Position controlled opening profile	speed, to adapt position command
2219/43073 Time controlled opening profile	2219/43112 Using feedforward prediction of position
2219/43074 Control speed, acceleration so as to follow	2219/43113 Give stop order a certain number of motor
desired speed profile	rotations before end stop
2219/43075 Two modes, one normal and one for obstruction by objects	2219/43114 Detect position, speed or time of object between begin and end, adapt motion
2219/43076 Switch from acceleration to constant speed as	2219/43115 Adaptive stopping
function of detected speed limit	2219/43116 Calculate overshoot from supply voltage
2219/43077 • • • Limit switch starts braking, stop, no braking,	change, adapt motion
low torque movement until end	2219/43117 Torque compensation as function of position reference, feedback of speed and position
2219/43078 Near end position limit switch, brake by	2219/43118 Adjust position reference as function of
reversing, then slow until end limit 2219/43079 Acceleration, deceleration controlled by	position reference, feedback of speed and
switches along path	position
2219/43081 Set parameters of profile generator, creep	2219/43119 Adapt robot motion to machine speed as
distance and speed, flight time	function of error from programmed speed
2219/43082 Near end position limit switch, lower speed and	2219/43121 • • • Axis speed as function of probing signal during
brake	probing of workpiece
2219/43083 • • • Structure, step motor	2219/43122 Adapt speed, feed as function of duration of transmission of instruction
2219/43084 Acceleration deceleration circuit implemented	2219/43123 • • • Speed of cutter as function of position of feeler,
in software, algorithm	probe
2219/43085 Acceleration-deceleration circuit before interpolator	2219/43124 Adapt speed as function of material, thickness,
2219/43086 Acceleration-deceleration circuit after	depth, volume, width, uniform surface quality
interpolator	2219/43125 Speed as function of size of chuck, diameter
2219/43087 Stop valves to stop fluid flow of hydraulic	tool
drive cylinder	2219/43126 Pivoting speed of workpiece as function of
2219/43088 Select out of plurality of acceleration profiles	inverse of work, machining time needed
2219/43089 Rom, ram with speed and acceleration	2219/43127 • • • As a function of, select reference velocity as function of gear ratio
2219/43091 Ram with optimum motion curve	2219/43128 Feed as function of number of press operations
2219/43092 Torque curve, wave stored in rom, ram	2219/43129 Speed as function of curvature, in curves,
2219/43093 Speed pattern, table together with timing data in ram	corners smaller than in straight line
2219/43094 Acceleration and deceleration together with	2219/43131 Adapt speed as function of lag, follow up error
their respective time	2219/43132 Rotation speed as function of minimum wave energy, toolwear, first learn for different speeds
2219/43095 Maximum speed and acceleration deceleration	2219/43133 • • Delay movement start as function of lag, follow
time constant as function of position	up error
2219/43096 Position, trajectory and speed stored in ram	2219/43134 Feed or speed as function of magnetic
2219/43097 Table, rom, ram speed table	characteristic, code, form of tool
	2219/43135 Reduce path speed near centre of axis

2219/43136 Lower speed of indexing motor if door to turret lathe is open	2219/43179 Speed changes gradualy from constant value to zero
2219/43137 Constant path speed for combined rotational and linear movement	2219/43181 Reaching reference position by spiraling speed reference
2219/43138 Set speed by controlling position of pulley of variable transmission	2219/43182 Speed control with feedback and as reference the programmed value
2219/43139 VCO variable frequency oscillator or two oscilators with different frequency	2219/43183 Speed control, input is the reference, but no feedback
2219/43141 Surface, path, tangential speed	2219/43184 From desired speed, derive delta positions
2219/43142 Control relative speed between two spindles	during equal intervals
2219/43143 ADC ramp and velocities are set by potentiometers which control digital valve	2219/43185 Speed invariant motions, path accuracy independent of speed
2219/43144 Accelerate one slide and decelerate other slide	2219/43186 Pulses from handle, knob, hand wheel control
to keep speed constant	speed
2219/43145 Machine first with low spindle speed, then with high speed, avoid chatter	2219/43187 Vector speed, ratio between axis, without feedback
2219/43146 Control of speed, velocity of movement of tool	2219/43188 Vector speed with feedback
as function of power of tool	2219/43189 Sum of squares
2219/43147 • • • Control power of tool as function of speed, velocity of movement	2219/43191 Approximation
2219/43148 Rapid return, retract stroke	2219/43192 Brake while driving to obtain very low speed, step wise movement, then stop
2219/43149 Rapid return, retract stroke	2219/43193 Variable slope speed steps as function of
clamping, bonding	position, pulse pump controller
2219/43151 Rapid feed in, slow workspeed during entering	2219/43194 Speed steps, switch over as function of position
material, then high work speed	2219/43195 Using a tri-phase motor and a step motor
2219/43152 Feed in, transfer line, rapid traverse to work,	2219/43196 Using two motors
grip speed	2219/43197 Two axis at the same time
2219/43153 Control depth of feed in by timer 2219/43154 Quick feed in to workpiece without gauging,	2219/43198 Coupling and step motor
then normal feed with gauging	2219/43199 Safety, limitation of feedrate
2219/43155 Rapid speed for approach then slow speed for	2219/43201 Limit speed to allowable speed for all axis
working	2219/43202 If collision danger, speed is low, slow motion 2219/43203 Limitation of speed, permissible, allowable,
2219/43156 Feed rate	maximum speed
2219/43157 Feed rate	2219/43204 Different, dynamic current limits as function of
2219/43158 Feedrate override	speed
2219/43159 Feedrate override only for x y, not for z or only	2219/43205 General tape speed controls speed of axis
for z and not for x y	2219/43206 Tape speed controls speed of axis
2219/43161 Second, independent feedrate override 2219/43162 Motion control, movement speed combined	2219/45 Nc applications
with position	2219/45001 Antenna orientation

2219/45206 Ultrasonic drill, mill, machining	2219/4711 Using a pantograph
2219/45207 Actuator to regulate position, flow, speed,	2219/4712 Using photocell sensible to different colours

process variable

2219/4713 Limit scanning surface by marks, stored limit, limit switches	2219/49031 Project particles, laser beam to point using two, more jets, beams, ballistic particle
2219/4714 Use of help paths to go to different workpiece paths to be followed	2219/49032 Bond layers with glue, solder, welding, brazing in LOM
2219/4715 Second photocell in advance of first, to control speed or other operation	2219/49033 Blanks or taken from roll of metal sheet 2219/49034 Changing design, use same prototype, add
2219/4716 Trace electric potential lines to control z motion	reinforcements where needed 2219/49035 Reconstruct boundary volume from stack of
2219/4717 Machine 3-D model by tracing two 2-D models	layer contours, sections
2219/4718 Two mode switch over tracking as function of predetermined cmm probe angle	2219/49036 Use quality measures, build time, strength of material, surface approximation
2219/4719 Line detector with laser beam, adjustable optical axis	2219/49037 Electro rheological fluid to build support for overhanging parts, particle jet
2219/49 Nc machine tool, till multiple	2219/49038 Support help, grid between support and
2219/49001 Machine tool problems	prototype, separate easily
2219/49002 Map unfolded surface on flat surface to make	2219/49039 Build layer of different, weaker material
dies, composite objects, free form	between support and prototype
2219/49003 Make two halves of tool, model at the same time	2219/49041 Workpiece is surrounded by softer support material during machining
2219/49004 Modeling, making, manufacturing model to control machine, cmm	2219/49042 Remove chips from probe, tool by blowing them away
2219/49005 Map 2-D pattern on 3-D	2219/49043 Control of lubrication
2219/49006 Nc machine makes cams, model to control, or	2219/49044 Control preload of spindle bearing
make a copy, on other machines 2219/49007 Making, forming 3-D object, model, surface	2219/49045 Relieve stress of workpiece after machinining by vibration table
2219/49008 Making 3-D object, model, surface	2219/49046 Control flatness of deformable workpiece table
memory	2219/49047 Remove chips by tool up down movement,
2219/49009 Model stored in a memory of a prototype	pecking
2219/49011 Machine 2-D slices, build 3-D model, laminated object manufacturing LOM	2219/49048 Control of damping of vibration of machine base
2219/49012 Remove material by laser beam, air, water jet to form 3-D object	2219/49049 Coolant serves as lubrication and also to take away swarf, chips
2219/49013 Deposit layers, cured by scanning laser, stereo	2219/49051 Heat treatment of workpiece, tempering
lithography SLA, prototyping	2219/49052 Accessory, coolant
2219/49014 Calculate number and form of 2-D slices automatically from volume on screen	2219/49053 Break chips, spiral chips, interrupt momentarily in feed during two or more rotations
2219/49015 Wire, strang laying, deposit fluid, welding,	2219/49054 Active damping of tool vibration
adhesive, hardening, solidification, fuse	2219/49055 Remove chips from probe, tool by vibration
2219/49016 Desktop manufacturing [DTM]; Solid freeform	2219/49056 Control of flow of fluid or temperature as
machining [SFM]; Solid freeform fabrication	function of speed for uniform coating
[SFF]	2219/49057 Controlling temperature of workpiece, tool,
2219/49017 DTM desktop manufacturing, prototyping	probe holder
2219/49018 Laser sintering of powder in layers, selective laser sintering SLS	2219/49058 Division algorithm, calculate inverse ratio of cutting process from parameters
2219/49019 Machine 3-D slices, to build 3-D model,	2219/49059 Machine with constant volume in time
stratified object manufacturing SOM	2219/49061 Calculate optimum operating, machining
2219/49021 Deposit layer, machine, mill layer, then new	conditions and adjust, adapt them
layer, SDM solid deposit manufacting	2219/49062 Adaptive control AC
2219/49022 Photo masking, mask cures whole layer at one	2219/49063 Adaptive control constraint ACC
time, add wax, mill, new layer	2219/49064 Fuzzy adaptive control
2219/49023 3-D printing, layer of powder, add drops of binder in layer, new powder	2219/49065 Execute learning mode first for determining adaptive control parameters
2219/49024 LEM laminated engineering materials, like lom	2219/49066 Geometric adaptive control
but first cut, then stack	2219/49067 Find optimum between production rate and
2219/49025 By positioning plurality of rods, pins to form together a mold, maquette	quality, number of points and speed
2219/49026 SDM shape deposition manufacturing for	2219/49068 Minimum cost adaptive
multimaterial layers	2219/49069 Adaptive control optimalisation ACO
2219/49027 SALD selective area laser deposition, vapor	2219/49071 Cycle time reduction
solidifies on surface	2219/49072 Action, withdraw, stop feed tool to prevent breakage or lower load
2219/49028 Rapid freeze prototyping, selectively deposit	2219/49073 Adapt machining parameters so as to keep
and rapidly freeze water layer by layer	temperature constant
2219/49029 Virtual rapid prototyping, create a virtual prototype, simulate rapid prototyping process	2219/49074 Control cutting speed

2219/49075 Control depth of cut	2219/4911	9 1	Machine arc of circumference, as groove,
2219/49076 Reduce cutting speed if for			cylindrical interpolation
minimum level	2219/4912		C-axis for turning, fifth axis for milling
2219/49077 Control of feed and spind			Multiclamping, to reduce dead times
2219/49078 Control of feed only			Simulation of clamping workpiece, modeling
2219/49079 Control cutting torque, fo			fixture and workpiece
2219/49081 If obstruction, bad joint, i retry operation	move head aside and 2219/4912		Determine clamping position from equipment specification and machining shape
2219/49082 Maintain constant materia	al removal rate 2219/4913		Open clamp if tool approaches clamp zone,
2219/49083 If number of feed retracti			close again afterwards
repeat same instruction b			Clamp piece to pallet using connectable power
2219/49084 Control roughness of surf	ace	_	source
2219/49085 CMP end point analysis,	F		Variable clamping force as function of
on points to detect end of			movement, force on workpiece
2219/49086 Adjust feeding speed or r	- F		Determine maximum clamping force as function of allowable displacement workpiece
main spindle when load of			Clamps are movable along rod to desired
2219/49087 Adjust parameter to comp 2219/49088 As a function of, regulate			positions
material, tool	2219/4913		High force clamping along periphery
2219/49089 • • • Control feed as function of			Control fixed clamping force
tools engaging simultaneo		33	Variable chuck clamping force as function of
2219/49091 Control feed as function of	of detected diameter,		spindle speed
cross section of workpiec	e 2219/4913		Clamp, keep positioned slide, workpiece
2219/49092 Vary, change controlled p	parameter as function		stationary during machining
of detected power			Active clamping, use servo to keep in position
2219/49093 Adapt cutting speed as fu cutting	nction of depth of 2219/4913		Vacuum pads hold workpiece during machining
2219/49094 • • • Feed as function of devia	tion of real from 2219/4913		Store working envelop, limit, allowed zone
programmed position at f			Adapt working envelop, limit, allowed zone to
2219/49095 Of rigidity of workpiece			speed of tool
2219/49096 Deviation of compliant m	nounted tool 2219/4913	39	Alarm if outside zone
2219/49097 Material type of each layer	er to be drilled, to be 2219/4914		Detect near collision and slow, stop, inhibit
joined	-22121121		movement tool
2219/49098 As a function of machine	1 6 1		Shut off power, stop if outside working zone
tool	2219/4914		Obstacle, collision avoiding control, move so that no collision occurs
2219/49099 Cutting force, torque 2219/49101 As function of tool speed	2219/491/		Limit movement on an axis by setting limits
2219/49101 As function of tool speed 2219/49102 Tool temperature			Spheres replace object, check first collision for
2219/49103 Speed and feed	221)/471-		large spheres, then small
2219/49104 Chip thickness	2219/4914		Tool changing registers geometry of tool to
2219/49105 Emitted noise of tool			avoid collision
2219/49106 Feed as function of latera	l movement of saw 2219/4914		Retract on collision with moving object, tool
blade			follows, yields to object
2219/49107 Optimize spindle speed a			Adapt working envelop, limit to size workpiece
calculated motion error	2219/4914		Ball end cutter interference, caused by tool
2219/49108 Spindle speed	2210/4019		shape, overcut part surface Axis related interference, remove hidden
2219/49109 Control cutting speed as f	unction of tool wife		surfaces
wear, measure diameter of 2219/49111 Cutting speed as function	2210/401		Feedhold, stop motion if machine door is open,
curve	of contour, path,		if operator in forbidden zone
2219/49112 Compensation alignment	of cylindrical 2219/4915		Avoid collision, interference between tools
workpiece	or cymharicar	1	moving along same axis
2219/49113 Align elements like hole	and drill, centering 2219/4915		Detect position of slide to change hover height
tool, probe, workpiece			of tool to avoid collision
2219/49114 Go to coarse programmed	d reference, detector 2219/4915		On collision, reverse motor over certain angle, then stop to avoid bending
for fine alignment	2219/4014		On collision, cut off motor, delay, again motor
2219/49115 Alignment by taking into in signal, for small offsets	account asymmetries		on, repeat to avoid bending
2219/49116 Align tool head with fixed	2210/401/		Limitation, collision, interference, forbidden
actuators along tool head	slideways		zones, avoid obstacles
2219/49117 Alignment of surfaces to	get them parallel 2219/4915		On near collision reduce speed
2219/49118 Machine end face, contro	2210/401/		Avoid pinching of persons between moving
		į.	and fixed part

2219/49161 Near end of position, lower power or speed of	2219/49202 For point to point positioning
motor to safe value, at end normal	2219/49203 For linear movement
2219/49162 • • • On collision, obstruction reverse drive, accelerate, cancel inertia	2219/49204 Control of heat to compensate for dilatation, thermal displacement
2219/49163 • • • Stop, dwell in corner edge, allow for cooling, go on machining, better surface	2219/49205 Compensate with stored values as function of machining time
2219/49164 Corner, making corner	2219/49206 Compensation temperature, thermal
2219/49165 Compensation relative movement between two	displacement, use measured temperature
commonly driven slides 2219/49166 Compensation for measured deviation of tool	2219/49207 Compensate thermal displacement using measured distance
path, as function of length of path 2219/49167 Execute compensation only if workhead,	2219/49208 Preheat spindle by powering polyphase motor with monophase
module is connected	2219/49209 Compensation by using temperature feelers on
2219/49168 Compensate feed as function of measured	slide, base, workhead
values and manual introduced values	2219/49211 Compensation dilatation using calculated
2219/49169 Compensation for temperature, bending of tool	temperature from velocity
2219/49171 Compensate for dressing amount 2219/49172 Compensate slide position as function of	2219/49212 Using lookup table, map, position error, temperature and position
indexed workpiece spindle position error	2219/49213 Active thermal preload regulation for spindle
2219/49173 Compensation for sidewise deviation of	2219/49214 Estimate error from heat distribution model and
machined workpiece	drive current, correct error
2219/49174 Compensate position by use of separate cmm	2219/49215 Regulate temperature of coolant
2219/49175 Compensate for errors in cmm, especially	2219/49216 Control of temperature of processor
mirror errors, not flat enough	2219/49217 Compensation of temperature increase by the
2219/49176 Compensation of vibration of machine base due	measurement
to slide movement	2219/49218 Compensation of workpiece dilatation
2219/49177 Runout, eccentricity, unbalance of tool or	2219/49219 Compensation temperature, thermal
workpiece Companyation of tool position as function of	displacement
2219/49178 Compensation of tool position as function of square of rotating speed of spindle	2219/49221 Control of scale
2219/49179 Compensation for reluctance of axis motors	2219/49222 Rough cut at high speed 2219/49223 Remove workpiece portions left uncut,
causing surface ondulation	unmachined by tool with suitable shape
2219/49181 Calculation, estimation, creation of error model	2219/49224 Identify and calculate uncut portions
using measured error values	2219/49225 Adapt machining conditions as function of
2219/49182 Tapping, overshoot after reversal, elasticity	workpiece cutting resistance
compensation	2219/49226 Cut, up or down cutting, cutting direction right,
2219/49183 Compensation height of tool as function of horizontal position of spindle head, bending	left
2219/49184 Compensation for bending of workpiece,	2219/49227 Cutting with trailing or leading edge of tool
flexible workpiece	2219/49228 Unidirectional or multidirectional cutting
2219/49185 Position error compensation as function of	2219/49229 Cutter, axis change over 2219/49231 Keep tool, probe at constant distance from
position of slide, control bearing pressure 2219/49186 • • • Deflection, bending of tool	workpiece surface
2219/49187 Control position of steady rest to compensate	2219/49232 Limit penetration of drill into backup material, support
bending	2219/49233 Machining depth relative to surface, constant
2219/49188 Proportional compensation from middle to end of elongated workpiece	depth
2219/49189 Bending of driven table, lag between real and	2219/49234 Keep constant distance even if hole present,
commanded position	avoid collision tool with hole
2219/49191 Bending, tilt spindle in bearings to compensate	2219/49235 Control depth as function of grey level of scanned object, map of thickness
for bending	2219/49236 Translate thickness to be removed in dwell
2219/49192 Create optical reference axis always kept parallel to reference optical block	delay, then to corresponding speed
2219/49193 Orthogonality of axis, deviation from 90-	2219/49237 Depth, tool depth control 2219/49238 Surface tracking, following
degree correction	2219/49239 Surface tracking, following 2219/49239 Dimensions
2219/49194 Structure error, in slide or screw	2219/49241 2-5-D lace cutting, work in xy and increment in
2219/49195 Slide, guideway, robot arm deviation	z, repeat
2219/49196 Screw	2219/49242 4-D
2219/49197 Gear	2219/49243 5-D
2219/49198 Using lookup table, map, position and	2219/49244 6-D
corresponding quasi static error	2219/49245 2-5-D pocket machining
2219/49199 For non linear interpolation movement	2219/49246 3-D printing, layer of powder, add drops of
2219/49201 • • • Variable load, slide friction, irregular machine guides	binder in layer, new powder

2219/49247 Dressing started after number of workpieces machined	2219/49295 Drive spindle motor at maximum, limit torque for rapid machining time
2219/49248 Dressing started if sparking out time to get correct surface is too long	2219/49296 Identification workpiece by dimension, height, resistance value, but no code
2219/49249 Dressing as function of load of grinding wheel	2219/49297 Spindle identification in multispindle station
2219/49251 Dress by conductive fluid between conductive	2219/49298 Probe identification
grindstone and electrode	2219/49299 Identify workpiece and align, center workpiece
2219/49252 Two spindle drives for common workpiece	at the same time
2219/49253 Position in space by controlling length of two, more cables, wires	2219/49301 Identify material to be used, select between several
2219/49254 High speed AC, induction spindle motor	2219/49302 • • Part, workpiece, code, tool identification
2219/49255 Gear meshing, synchronize both with relative phase, then shift	2219/49303 Tool identification and tool offset, compensation data together
2219/49256 Epicyclic movement of tool	2219/49304 Tool identification, code
2219/49257 Six or more linear drives to position x y z table	2219/49305 Store, memory on tool with control and
2219/49258 Two y axis to control also rotation	maintenance data
2219/49259 Endless belt with coupling, position tools	2219/49306 Derive kind of cutter from null load
simultaneously in both directions 2219/49261 Direct drive, without gear	2219/49307 Learn, learn operational zone, feed, speed to avoid tool breakage
2219/49262 Two drives at both sides of long tool	2219/49308 Fuzzy classification of tool wear states
2219/49263 Separate, auxiliary indexing motor	2219/49309 Main and secondary machining area, main
2219/49264 Several x-y slides on single surface	spindle and satellite spindle
2219/49265 X motor moves x and y axis, y motor only y	2219/49311 Select machining portion of workpiece,
axis	pivoting workpiece as function of correction
2219/49266 Two xy tables, on top and below workpiece, in	needed
between a cutting wire	2219/49312 Fixture free machining
2219/49267 Three linear actuators to position vertically and	2219/49313 Machining about eccentric center different
rotate horizontally	from rotational center of workpiece
2219/49268 Four bar mechanism	2219/49314 Machine with oscillating workpiece, no full rotation
2219/49269 Single motor for different drives, switch,	2219/49315 Machine first contour slowly, then remaining
change gears 2219/49271 Air bearing slide, hydraulic, electromagnetic	surface quickly, fast
bearing	2219/49316 Back-off grinding, during wheel retract, by
2219/49272 Electromagnetic bearing also used as feed in	deflection workpiece, after plunge
one axis or positioning in two axis	2219/49317 Traverse grinding, move along workpiece
2219/49273 Switch between continuous drive and index or	2219/49318 Grind and simultaneous gauging, dwell,
stop mode	measure and final feed without gauging
2219/49274 Four linear actuators to position x y table	2219/49319 Centerless machining, grinding, cutting
2219/49275 Linear actuators on x y to position x y table,	2219/49321 Reverse movement of tool to deburr
ballscrew drive on y to rotate	2219/49322 Cool to solidify material before machining it 2219/49323 Machine long, slender workpiece
2219/49276 Floating, air, magnetic suspension xy table, sawyer motor, xenetics	2219/49324 Different starting point for each machining
2219/49277 Oscillating, swinging feed drive, for grinding	pass, to prevent dent formation
2219/49278 Parallel link mechanism	2219/49325 Combine punching and laser machining
2219/49279 Nanometric xy table	2219/49326 Drill on laser machine, transfer to edm for
2219/49281 X y table positioned by vibration	operation on hole, adjust position
2219/49282 Same control for double drive or slide	2219/49327 Combine punch and marker, engraving for
2219/49283 Frictionless rolling element	workpiece
2219/49284 Two cascaded slides, large range sits on small	2219/49328 Laser machining and milling combined
range, piggyback	2219/49329 Combine edm and milling
2219/49285 Linear control rotating movement kept constant	2219/49331 Laser drilling followed by laser cutting
2219/49286 Two rotations gives cartesian coordinates,	2219/49332 First saw rough contours in workpiece then mill rest
compact construction 2219/49287 Motor drives cam for very fine linear	2219/49333 Drilling and thread cutting by same machine
displacement, movement	2219/49334 Combine turning, milling, grinding or other in
2219/49288 Three linear actuators to position x y table	one setup
2219/49289 Large transmission ratio	2219/49335 Part, workpiece, inner, internal outer, external
2219/49291 Torque, moment, drive power amplifier,	machining
movement follower	2219/49336 Machine two mating, matching parts, at
2219/49292 Harmonic gear, transmission, strain wave gear	opposite ends of spindle, simultaneously
2219/49293 Switch between dual, double slide or double	2219/49337 Machine holes in spherical nodes
spindle mode	2219/49338 Micromachining, workpieces small, around 1-mm or less
2219/49294 Motor and brake actuated together	mil Of 1000

2219/49339 Machine simultaneous left and right, mirror	2219/49381 Raster, line servo, area machining, cutting,
part	facing
2219/49341 Manual pocket machining, multipasses	2219/49382 Movement reciprocating
2219/49342 Select between concentric and eccentric regions of a workpiece	2219/49383 Using pick feed with non reciprocating machining direction
2219/49343 Machining point symmetrical surfaces, revolving surfaces	2219/49384 Control of oscillatory movement like filling a weld, weaving
2219/49344 Surface, 5-axis surface machining	2219/49385 Using pick feed when machining a surface
2219/49345 Smooth and polish surface at the same time	2219/49386 Automatic seam, weld line, finding
2219/49346 3-Axis surface machining	2219/49387 Limiting scanning region
2219/49347 Machine cover, first scan surface on which cover is to be placed	2219/49388 Computer controlled movement of plotter is transferred to tool by pantograph
2219/49348 Mill surface from underneath workpiece, easy chips, cutout material evacuation	2219/49389 Machine alternative both sides of rib, net machining, against deformation
2219/49349 Drill both sides of workpiece at the same time, under and over workpiece	2219/49391 Adapt number of passes as function of tool wear
2219/49351 4-Axis surface machining	2219/49392 Multipasses, segmentation of cut, paraxial
2219/49352 7-Axis surface machining	cutting
2219/49353 Control of output power of tool, laser beam	2219/49393 Machining step, fixing smallest step nibble
2219/49354 High speed cutting	machine, planer
2219/49355 Machine flat surface on rotating workpiece, rotate tool inverse direction	2219/49394 Stop in one point, execute other operation and return back to first point
2219/49356 Tool with constant force against workpiece during machining	2219/49395 Repeating same operations for other coordinates
2219/49357 Tool perpendicular to surface with varying force	2219/49396 Stepwise milling, mill by advancing larger step then retract smaller step, repeat
2219/49358 Facing milling, tool perpendicular to surface	2219/49397 Control of dwell time
2219/49359 Cylindrical or side milling, tool tangential to surface	2219/49398 Repeat same operations on machined part until machining reaches its finishing
2219/49361 Workpiece and tool have each own rotation speed	2219/50 Machine tool, machine tool null till machine tool work handling
2219/49362 • • • Tool, probe at constant height to surface during machining	2219/50001 Multislides, multispindles with multitool turret for each
2219/49363 • • • Minimalize time for tool movement between different positions, holes	2219/50002 Drill more holes simultaneously, adapt distance tools as function of detected image
2219/49364 Minimize number of punch strokes	2219/50003 Machine simultaneously two workpieces
2219/49365 Minimise noncutting area, tool travel, eliminate	2219/50004 Multitool at the same time, priority for one tool
air cutting	as function of machining parameter
2219/49366 Machine several small pieces on one sheet, break off pieces	2219/50005 Multiple chuck machining, chuck position change after each partial machining
2219/49367 Group machines into cells to minimise intercellular travel	2219/50006 Two parallel spindles, bi-spindle and two tool blocks sliding on same axis
2219/49368 Vision calculates errors while table already moves, result corrects movement	2219/50007 Multiple polishing heads, oscillating and rotating
2219/49369 Minimize machining time by maximizing feed, speed	2219/50008 Multiple, multi tool head, parallel machining 2219/50009 Revolver head
2219/49371 Variable laser spot width, small for boundary, large for rest	2219/50011 Two spindles drive single large tool, cooperation of spindles
2219/49372 Optimize toolpath pattern for a given cutting layer, mounting sequence	2219/50012 Multi slide and indexable multi workpiece spindles
2219/49373 Flying operation, while tool and workpiece have same speed	2219/50013 • • • Two spindles on same line, one for workpiece, other for tool, second tool on slide
2219/49374 Speed up each conveyor between two stations,	2219/50014 Several, multi workpieces
at stations synchronize in phase 2219/49375 Minimalizing machine time, number of tool	2219/50015 Multi cutting, twin tools contact at same time workpiece, balance cutting
change 2219/49376 Select two machining types, milling or turning,	2219/50016 Turret with multiple workpiece holders, spindles, multiple fixed tools around it
complete machining with one tool 2219/49377 Eliminate double cutting	2219/50017 • • • Two programs, two slides, data second slide related to moving origin of first
2219/49378 Tool path finding, select minimal distance	2219/50018 Zero point floating
2219/49379 • • • Key input path, move one axis manually, other	2219/50019 Zero, null offset
axis slave controlled by program	2219/50021 Configuration, null point on tool relative to null
and said controlled of program	point on workpiece

	oint on tool relative to null point of der, rotationcenter	2219/50063 .		Probe, measure, verify workpiece, feedback measured values
2219/50023 Measur	re different null points, references of tool re in memory	2219/50064 .		Camera inspects workpiece for errors, correction of workpiece at desired position
2219/50024 Go to re	eference, switches and dog to decelerate eletect origin	2219/50065 .		Estimate trends from past measured values, correct before really out of tolerance
2219/50025 Go to re	eference, switches and dog detect origin, e with pulse from encoder	2219/50066 .		Fit base pattern into detected geometrical workpiece data, create whole program
2219/50026 Go to re	eference plane, cube	2219/50067 .		Measure surface for thickness and store map in
2219/50027 Go to w	vorkpiece surface plane and store	2219/50068 .		memory, machine surface Test valve, object, store parameters, machine
2219/50028 Beam d	letects x, y deviation on surface, nsates beam of position scanner			object to get wanted performance Reject workpiece if not machinable, material to
	ivotable, rotatable reference plane	2219/30009	• •	be machined too large
	tting, go to reference with gauge	2219/50071 .		Store actual surface in memory before
	axis only, derive from inclined surface			machining, compare with reference surface
offsets	for other axis	2219/50072 .		Machine workpiece again to correct previous
2219/50033 Align to	ool, tip with a calibration mask			errors
	rch range about origin, select between at overlapping ranges	2219/50073 .		Signature analysis, store forces during test, compare with real ones during assemby
2219/50035 Go to re	eference point and measure a preset	2219/50074 .		Purpose, workpiece measurement to control,
-	ressure, store position	2210/50075		adapt feed of tool
2219/50036 Find ce		2219/300/3		To adapt, control force level at which machining will be considered as finished
control	her upper or lower limit for home	2219/50076		To derive from state of surface, the need to
	nechanical limit with low speed, until	2219700070	•	change used, worn tool
	g of drive	2219/50077 .		Keep position by switching over to auxiliary
	obe, one on turret, serves also to			power supply for resolver, encoder
	e second probe on bed	2219/50078 .		Single battery backup for all axis, encoders,
2219/50041 Measur	ing intensity of tool vibration			resolvers
2219/50042 Return homing	to origin, reference point, zero point,			Battery backup supply switched over data, signal lines, to save cable
2219/50043 Near ze		2219/50081 .		On power loss, shut down axis using generated
2219/50044 For spe		2219/50082		power from one braked axis UPS, no break to power actuator and move into
	ned axis jogging, following programmed nstead of single axis			safe condition
2219/50046 Control	of level, horizontal, inclination of			Power loss, measures again loss of power
	older, slide			Keep position, setup parameters in memory
2219/50047 Position	-	2219/50085 .	• •	Realignment, search reference to restablish position
2219/50048 Jogging		2219/50086		Microprocessor
	machine as function of position, angle			Rough, coarse and finish, fine machining
of work	-			Rough and finish machining simultaneously
2219/30031 Turn w	orkpiece axis perpendicular to turn axis			Finish allowance equals offset rough finish tool
2219/50052 Orientin				and bending work under rough
	e non circular, non-round cross section,	2219/50091 .		Rough machining
	nal, rectangular			Sculptured part rough machining with the
2219/50054 Drill or				offset approach
2219/50055 Make h	ollow worpiece with uniform wall	2219/50093 .	• •	Sculptured rough machining with the contour map approach, make slices
2219/50056 Profile,	for operation on I-, T-profiles or other	2219/50094 •		Optimize number of layers to be cut for contour map approach
	ed profiles nsation error by probing test, machined	2219/50095 .		On tool breakage return to a reference then
	oost or pre process			follow already machined path
2219/50058 During	machining, measure previous part to sate errors	2219/50096 .	• •	After interrupt, use tool path display to bring tool back on path
2219/50059 Record	profile error, used for next machining	2219/50097 .	• •	After repair, dry run program until block before restart is detected
pass 2219/50061 Compe	nsation of measuring errors due to	2219/50098 .		After interrupt, interpolate with suitable
	e with footprint			startpoint different from stoppoint
2219/50062 Measur	re deviation of workpiece under working	2219/50099 .	• •	Before restart change jig, fixture with workpieces
condition	ons, machine correction	2219/50101 .		For fine machining, select tool and offset, block
				and restart midway

2219/50102	Store history of operation, after power failure, restart from history, journal	2219/50143	Tool set up integrated, automatically transferred into control system
2219/50103	Restart, reverse, return along machined path, stop	2219/50144	offline setup by simulation of process, during machining, forming of other piece
2219/50104	Before restarting program, restore machine	2219/50145	Tool setup manual, preset of the machine
2217/30101	status existing at stop time		Machine construction error compensation using
2219/50105	Display instructions to operator on how to	2217/30140	ann
2213/18/01/08	restart machine	2219/50147	Calibrate tool heads based on calibration of
2219/50106	Before allowing restart, check that machine	2217/30147	first tool head
	condition is optimal	2219/50148	Workpiece, setup of component, workpiece
2219/50107	Retract tool if end of drilling is detected		Find orientation workpiece which maximizes
	Retract tool stepwise, same path, until safe		number of faces machined in one setup
	boundary reached, then quick retract	2219/50151	Orient, translate, align workpiece to fit position
2219/50109	Soft approach, engage, retract, escape,		assumed in program
	withdraw path for tool to workpiece	2219/50152	Align axis cylinder, tube with rotation axis
2219/50111	Retract tool along path, reengage along same		machine
	path	2219/50153	Mount machining unit on workpiece, move unit
2219/50112	Retract tool to a point		on it
2219/50113	Short stroke, retract tool, safe distance from	2219/50154	Milling center
	workpiece surface, hover height	2219/50155	Swivel spindle head horizontally
2219/50114	Select approach path as function of zone for	2219/50156	Tiltable rotary table
	tool slide	2219/50157	Universal swivel spindle head, swivel in all
	Select complicated, combined approach path		directions
	Select approach path out of plurality	2219/50158	Modular structure
2219/50117	Select approach path as function of machining	2219/50159	Steady rest
	time	2219/50161	Reverse engineering, cloning
2219/50118	Select as function of position of tool during	2219/50162	Stewart platform, hexapod construction
	cycle, optimum path	2219/50163	Machine stations and control modules build as
2219/50119	Select between set of paths as function of		a unity to be connected in line
	interrupt nature	2219/50164	Select a structure to make programming of free
2219/50121	Machining several workpieces with one or		curved surface easier
2210/50122	more tools in one setup	2219/50165	Axis nc machine cooperates with two axis
	Workpiece holder, chuck jaws, fixture setup		rotary table
	Setup, automatic setup	2219/50166	Extended range, machine a workpiece over a
2219/50124	Automatic new setup when new program		long distance
2210/50125	selected		Adapting to copying
	Configurable fixture, jig	2219/50168	
2219/30120	Position clamp, fixture by machining head itself		Double stewart platform
2210/50127	Modular fixture, use of clamps and locators, the		Machine, machining centre, center
2219/30127	latter also for positioning		Tool holder is transparent
2219/50128	Reference free part encapsulation, fixture using	2219/50173	Machine tool hang and move on rail above
2217/30120	molten filler and cube	2210/50154	workpiece
2219/50129	Setup machines as function of process model,		Machine tool y-1, y-2, z, A-axis, table x, c-axis
2213/18/0123	control strategy for optimum use of machines	2219/50175	6-Dof manipulator associated with 1-DOF
2219/50131	Setup as function of tool position in	2210/50176	workpiece holder
	manufacturing center		Table, general, for machine tool
2219/50132		2219/30177	Protection for operator during operation, machining
	With optical beam, tool crosses beam	2210/50179	Clamp, brake gravity axis on power loss to
	Tool pushes reference plane, or <u>vice versa</u> ,	2219/301/8	clamp tool in position
	reverse motion until again zero	2219/50179	Dynamic tolerance, limit values as function of
2219/50135	Tool touches box, sensor to give a contact	2217/30177 • • •	speed, type of command
	signal	2219/50181	After stopping apply additionally a brake
2219/50136	With sensor, potentiometer to measure relative		Skip over pieces between machining and
	displacement	2217/30102 • • •	measuring station, on tool changing
2219/50137	Contact in probe, touch probe to detect contact,	2219/50183	Detect correct clamping of workpiece, chucks
	touch trigger		grip properly workpiece
2219/50138	During setup display is red, after setup display	2219/50184	Stop feed if relative movement between drive
	is green colour		and tool
2219/50139	Calibration, setting tool after measurement on	2219/50185	Monitoring, detect failures, control of
22121221	tool		efficiency of machine, tool life
2219/50141		2219/50186	Diagnostic of spindle bearing
2219/50142	Measure parallelism of tool with respect to plane and correct		
	DIGING AND COLLECT		

plane and correct

2219/50187	Stop drive motor if clutch refuses, remains active, if emergency	2219/50228	Synchronize two slides, portal gantry, raising, moving
2219/50188	If operation, feed movement not done after maximum allowable time, emergency stop	2219/50229	Synchronize axis by simulating several virtual axis to control real axis
2219/50189	Compare position of slide with positioning, tape data	2219/50231	Synchronize engage, disengage groups of axis as function of position of simulate
2219/50191	•	2219/50232	Synchronize change of feed and spindle speed
	If braking fails due to controller or amplifier		when overriding feed speed
	fault, separate delayed braking	2219/50233	Synchonize time-dependent with electronic
2219/50193	Safety in general		cam data
2219/50194	Before restarting machine, enter allowable, maximum speed corresponding to tool		Synchronize two spindles, axis, electronic transmission, line shafting
2219/50195	Emergency stop stops drives and spindle, stored program remains in memory	2219/50235	Select tools, slides, spindles to work synchronized, independent
2219/50196	Monitor clutch or belt drive	2219/50236	Tool editor for actual used tools and needed
2219/50197	Signature analysis, store working conditions,		next, missing, unused tools
	compare with actual	2219/50237	Detect wear by comparing coded value on tool
2219/50198		0010/50000	with real value, grind tool
2219/50199	Tool, nozzle is covered for protection in home		Search empty place in changer to place tool
	position, if needed also heated	2219/50239	Select tool manual from tool store, with
2219/50201	Tool looses contact with workpiece, alarm if no	2210/50241	permission from NC to deblock tool
2210/50202	cut through operation		Chuck, gripper, spindle changer
2219/50202	During movement of tool towards workpiece,		Tool changer and revolver fixed on spindle
2210/50202	shut down rotation, welding gun	2219/50243	Small buffer tool magazine, ordered tools, filled from large magazine, change time
	Tool, monitor condition tool	2210/50244	Machine integrated tool cassette
2219/50204	Tool replacement point, tool change position without damage, clearance plane		Change tools, like laser head and drill having
2210/50205		2219/30243	different driving needs
2219/30203	On tool breakage stop machine Tool monitoring integrated in nc control	2219/50246	Workpiece exchange
2219/50207			Change to finer, more adapted tools to machine
	Retrace, remachine portion of path, locus to	2217/30247 • • •	complex surface
2219/30200	remove start discontinuities	2219/50248	Control position of coolant nozzle as function
2219/50209	Surface treatment, roughing surface	2217/30210	of selected tool
	Finish machining, spark out, rough out	2219/50249	Tool, probe, pen changer
	Giving a texture, structure to surface, like		Mobile tool magazine to replace spare or rarely
	leather, wood appearance Grooving of different forms or parallel to each		used tool Replace, change tool with tracer head, probe,
2219/30213 • • •	other, grooving cycle	2217/00202	feeler
2219/50214	Refurbish, refinish, reprofile, recondition,	2219/50253	Selection tool
	restore, rebuild profile		Change feeler or tool on different curvature of
2219/50215	Move synchrously tool and anvil at both sides		workpiece, model
	of plate	2219/50255	Tool selection sets speed machining, kind of
2219/50216	Synchronize speed and position of several axis,		cooling, other parameter
	spindles	2219/50256	Orienting selected tool with respect to
2219/50217	Synchronize, control phase angle of two		workpiece
	spindles by auxiliary index motor		Kind of revolver magazine
	Synchronize groups of axis, spindles	2219/50258	-
2219/50219	Slave spindle is driven at half the torque of	2219/50259	_
	main spindle for synchronism	2219/50261	Two tool holders to eliminate tool change time,
2219/50221	Switch speed reference from speed to position	2210/502/2	replace and search simultaneously
2210/50222	loop of both spindles to synchronize	2219/50262	Change tool at minimum distance from
2219/50222	Stop machines, actuators until others reach	2210/50262	workpiece
2210/50222	common synchronization point	2219/30203	Standby tool, tool ready for next machining
2219/30223	Loose synchronisation, can shift within time interval	2210/50264	step, change tool while machining Change tool during positioning movement
2210/50224			If tool life over, continue machining only actual
2217/JU224 • • •	Synchronize feed and spindle speed during slow down, stopping	4417/JU4UJ • • •	block, workability, then stop
2219/50225	Synchronize feed and spindle speed as function	2219/50266	During tool change, workpiece immobile, then
2217/JU22J • • •	of pitch of screw, thread	2217/30200 • • •	execute backward operation sequence
2219/50226	Synchronize feed and spindle speed in forward	2219/50267	Change tool and workpiece simultaneously,
2217/30220 • • •	and reverse feed	2217/30207 • • •	except if collision possible
2219/50227	Synchronize two axis by correcting for	2219/50268	Measure diameter only if new tool has been
	measured pitch errors		inserted

2219/50269 Minimize tool change by selecting appropriate	2219/50309 Correction of wear as function of dressing
fixture 2219/50271 Select second tool if first tool cannot machine	2219/50311 Compensate tool wear by grinding tool to a known position
workpiece without moving it	2219/50312 Compensation of tool wear by adapting
2219/50272 Change spare, used tool during machining,	program to profile of tool
minimize machining time	2219/50313 Tool offset, tool wear
2219/50273 • • • Before motor start of spindle with new tool, detect if old tool back in storage	2219/50314 Search for reference, go to reference 2219/50315 Selfcorrecting by measurement during
2219/50274 Measure new tool inserted by operator,	machining
compare with diameter needed to accept	2219/50316 Calculate as function of empirical calculated
2219/50275 Safety, verify correct code of chosen tool,	values from used tools
probe	2219/50317 As function of number of workpieces
2219/50276 Detect wear or defect tool, breakage and change tool	2219/50318 As function of number of cutting edges of saw, mill
2219/50277 Detection tool presence in tool holder, spindle	2219/50319 As function of tool geometry and machining
before starting motor	data
2219/50278 Send offset values from tool changer before	2219/50321 As function of machined volume per time unit
machining	2219/50322 As function of effective machining time
2219/50279 Adjust displacement amount of tracer as function of rough, finish machining	2219/50323 As function of tool type
2219/50281 Adjust tool for tool offset by using an axis	2219/50324 As function of coolant
parallel to feed axis	2219/50325 As function of measured vibrations 2219/50326 As function of feed forces
2219/50282 Tool offset as function of cutting depth	2219/50327 As function of cutting forces
2219/50283 Tool offset for two different diameters,	2219/50328 As function of motor spindle load, current
smoothing 2219/50284 Tool nose correction	2219/50329 Tool offset for pockets, area machining
2219/50285 Tool geometry compensation, keep contact of	avoiding interference with wall
tool on desired curve	2219/50331 Electrode, wire gap compensation in edm, wire
2219/50286 Fine adjustement tool head, adjustment with	cutting 2219/50332 Tool offset for 3-D surfaces normal to surface
respect to toolholder	2219/50333 Temperature
2219/50287 Tool offset as function of diameter of saw, for	2219/50334 Tool offset, diameter correction
begin and end point of path 2219/50288 Compensate tool offset as function of speed,	2219/50335 Tool offset for straight lines
needed when tool is not mounted correctly in	2219/50336 Tool, probe offset for curves, surfaces,
spindle	contouring
2219/50289 Tool offset general	2219/50337 Tool offset for point 2219/50338 Tool with rom chip
2219/50291 Multi-tool, several tools	2219/50339 Select machining portion of tool according to
2219/50292 Tool offset based on two cutter contact points, admitting some overcut	surface of work
2219/50293 Radial setting of tool	2219/50341 Tool with right and left nose value, different
2219/50294 Tool offset length by going to a reference and	radius
recording distance	2219/50342 Use two tools with different diameter
2219/50295 Tool offset by manual input by switches	2219/50343 Ball end tool, end is spherical 2219/50344 Flat end tool, end is flat
2219/50296 Tool offset by verifying piece and registrating	2219/50345 Bull nose tool, end is practical flat with
errors 2219/50297 Compensation of positioning error due to a-	rounded corners
axis, b-axis tool rotation	2219/50346 Ion ray
2219/50298 Trace with feelers of different diameter, from	2219/50347 Tool sends via electromagnetic waves actual
the two loci calculate offset	working condition
2219/50299 Correction data stored in memory attached to	2219/50348 Deform tool to adapt to workpiece, bow tool with pressure
tool or tool holder 2219/50301 Correction stored on tape, together with tool	2219/50349 Obtain normal vector of two points on surface,
identification	interpolate in between
2219/50302 Remachine same workpiece with same tool but	2219/50351 Rotate cutting tool to vary cutting tool
diminished tool offset	geometry
2219/50303 Resolver	2219/50352 Inclination of tool as function of diameter of workpiece
2219/50304 Correction from tape, file	2219/50353 Tool, probe inclination, orientation to surface,
2219/50305 For every diameter a tape 2219/50306 Tool height, axial displacement from center of	posture, attitude
circular workpiece, surface	2219/50354 If tool looses contact, change angle of tool with
2219/50307 Correction by probing dimension of machined	90-degrees
workpiece	2219/50355 Tool perpendicular to a 2-D curve 2219/50356 Tool perpendicular, normal to 3-D surface
2219/50308 Estimate wear from machining data and	2219/50357 Tool perpendicular, normal to 3-D surface
conditions
