H03 ELECTRONIC CIRCUITRY

H03M CODING; DECODING; CODE CONVERSION IN GENERAL (using fluidic means

<u>F15C 4/00</u>; optical analogue/digital converters <u>G02F 7/00</u>; coding, decoding or code conversion, specially adapted for particular applications, <u>see</u> the relevant subclasses, e.g. <u>G01D</u>, <u>G01R</u>, <u>G06F</u>, <u>G06T</u>, <u>G09G</u>, <u>G10L</u>, <u>G11B</u>, <u>G11C</u>, <u>H04B</u>, <u>H04L</u>, <u>H04M</u>, <u>H04N</u>; ciphering or deciphering for cryptography or other purposes involving the need for secrecy <u>G09C</u>)

WARNINGS

1. The following IPC groups are not in the CPC scheme. The subject matter for these IPC groups is classified in the following CPC groups:

8p		
H03M 7/32	covered by	H03M 7/3002, H03M 7/3004, H03M 7/3006,
		H03M 7/3008, H03M 7/3011, H03M 7/3013,
		H03M 7/3015, H03M 7/3017, H03M 7/302,
		H03M 7/3024, H03M 7/3028, H03M 7/3031,
		H03M 7/3033, H03M 7/3035, H03M 7/3037,
		H03M 7/304, H03M 7/3042, H03M 7/3048
H03M 7/34	covered by	H03M 7/3051
H03M 7/36	covered by	H03M 7/3022, H03M 7/3026, H03M 7/3044
H03M 7/38	covered by	<u>H03M 7/3046</u>
H03M 7/44	covered by	<u>H03M 7/40</u>

2. In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme.

1/00	Analogue/digital conversion; Digital/analogue conversion (conversion of analogue values to or from differential modulation H03M 3/00)	1/0609	• • • {at two points of the transfer characteristic, i.e. by adjusting two reference values, e.g. offset and gain error}
1/001 1/002	 {Analogue/digital/analogue conversion} {Provisions or arrangements for saving power,	1/0612	• • • {over the full range of the converter, e.g. for correcting differential non-linearity}
1,002	e.g. by allowing a sleep mode, using lower supply voltage for downstream stages, using multiple clock	1/0614	• • {of harmonic distortion (<u>H03M 1/0617</u> takes precedence)}
	domains or by selectively turning on stages when needed}	1/0617	• • {characterised by the use of methods or means not specific to a particular type of detrimental
1/004	• {Reconfigurable analogue/digital or digital/		influence}
	analogue converters (<u>H03M 1/02</u> takes precedence)}	1/0619	• • • {by dividing out the errors, i.e. using a ratiometric arrangement}
1/005	• • {among different converters types}	1/0621	• • • • { with auxiliary conversion of a value
1/007	• • {among different resolutions}		corresponding to the physical parameter(s) to

	undesired influence of physical parameters (periodically, {e.g. by using stored correction	1/0634	• • • {by averaging out the errors, e.g. using sliding scale}
	values,} <u>H03M 1/10</u>)	1/0636	• • • { in the amplitude domain }
1/0602	• • {of deviations from the desired transfer characteristic (<u>H03M 1/0617</u> takes precedence)}	1/0639	• • • • • {using dither, e.g. using triangular or sawtooth waveforms (for increasing
1/0604	• • • {at one point, i.e. by adjusting a single		resolution <u>H03M 1/201</u>)}
	reference value, e.g. bias or gain error (gain	1/0641	• • • • {the dither being a random signal}
	setting for range control <u>H03M 1/18</u>)}	1/0643	• • • {in the spatial domain}
1/0607	• • • • {Offset or drift compensation (removal of offset already present on the analogue input signal <u>H03M 1/1295</u>)}		

1/0646	• • • • {by analogue redistribution among corresponding nodes of adjacent cells, e.g.	1/0872	• • • {by disabling changes in the output during the transitions, e.g. by holding or latching}
	using an impedance network connected among all comparator outputs in a flash	1/0881	• • • {by forcing a gradual change from one output level to the next, e.g. soft-start}
	converter}	1/089	• • { of temperature variations }
1/0648	• • • • {by arranging the quantisation value	1/10	Calibration or testing
	generators in a non-sequential pattern	1/1004	• • { without interrupting normal operation, e.g.
	layout, e.g. symmetrical}		by providing an additional component for
1/0651	• • • • {by selecting the quantisation value		temporarily replacing components to be tested
	generators in a non-sequential order, e.g.		or calibrated (<u>H03M 1/1009</u> , <u>H03M 1/1071</u> take
	symmetrical }		precedence)}
1/0653	• • • • • { the order being based on measuring the	1/1009	• • {Calibration}
	error}	1/1014	• • { at one point of the transfer characteristic, i.e.
1/0656	• • • { in the time domain, e.g. using intended jitter		by adjusting a single reference value, e.g. bias
	as a dither signal}		or gain error (gain setting for range control
1/0658	• • • • {by calculating a running average of a		H03M 1/18)}
	number of subsequent samples}	1/1019	• • • {by storing a corrected or correction value in
1/066	• • • • {by continuously permuting the elements		a digital look-up table}
	used, i.e. dynamic element matching}	1/1023	• • • {Offset correction (H03M 1/1019 takes
1/0663	• • • • { using clocked averaging }		precedence; removal of offset already present
1/0665	{using data dependent selection of the		on the analogue input signal <u>H03M 1/1295</u>)}
	elements, e.g. data weighted averaging}	1/1028	• • {at two points of the transfer characteristic, i.e.
1/0668	{the selection being based on the		by adjusting two reference values, e.g. offset
	output of noise shaping circuits for		and gain error (gain setting for range control
	each element}		H03M 1/18)}
1/067	{using different permutation circuits for	1/1033	• • • {over the full range of the converter, e.g. for
	different parts of the digital signal}		correcting differential non-linearity}
1/0673	{using random selection of the elements	1/1038	• • • {by storing corrected or correction values
	(with data-controlled random generator		in one or more digital look-up tables
	<u>H03M 1/0665</u>)}		(<u>H03M 1/1057</u> takes precedence)}
1/0675	• • {using redundancy}	1/1042	• • • • {the look-up table containing corrected
1/0678	• • • {using additional components or elements,		values for replacing the original digital
	e.g. dummy components}		values (<u>H03M 1/1052</u> takes precedence)}
1/068	{the original and additional components	1/1047	• • • • {using an auxiliary digital/analogue
	or elements being complementary to each		converter for adding the correction values
	other, e.g. CMOS}		to the analogue signal (H03M 1/1052 takes
1/0682	• • • • • { using a differential network structure,		precedence)}
	i.e. symmetrical with respect to ground}	1/1052	• • • • {using two or more look-up tables each
1/0685	{using real and complementary		corresponding to a different type of error,
	patterns}		e.g. for offset, gain error and non-linearity
1/0687	• • • { using fault-tolerant coding, e.g. parity		error respectively}
	check, error correcting codes (H03M 1/069	1/1057	• • • {by trimming, i.e. by individually adjusting
	takes precedence)}		at least part of the quantisation value
1/069	• • • {by range overlap between successive stages		generators or stages to their nominal values}
	or steps}	1/1061	• • • • {using digitally programmable trimming
1/0692	• • • • { using a diminished radix representation,		circuits}
	e.g. radix 1.95}	1/1066	• • {Mechanical or optical alignment}
1/0695	{using less than the maximum number of	1/1071	• • {Measuring or testing}
	output states per stage or step, e.g. 1.5 per	1/1076	{Detection or location of converter hardware
	stage or less than 1.5 bit per stage type}		failure, e.g. power supply failure, open or short
1/0697	• • • {in time, e.g. using additional comparison		circuit}
	cycles}	1/108	• • • {Converters having special provisions for
1/08	• of noise $\{(\underline{\text{H03M 1/0617}} \text{ takes precedence})\}$		facilitating access for testing purposes}
1/0809	• • • {of bubble errors, i.e. irregularities in	1/1085	• • • {using domain transforms, e.g. Fast Fourier
	thermometer codes}		Transform}
1/0818	• • { of clock feed-through }	1/109	• • • {for dc performance, i.e. static testing
1/0827	• • • {of electromagnetic or electrostatic field noise,		$(\underline{\text{H03M 1/1085}} \text{ takes precedence})$
	e.g. preventing crosstalk by shielding or optical	1/1095	• • • {for ac performance, i.e. dynamic testing
	isolation}		(<u>H03M 1/1085</u> takes precedence)}
1/0836	• • • {of phase error, e.g. jitter}	1/12	• Analogue/digital converters ({H03M 1/001 - }
1/0845	• • • {of power supply variations, e.g. ripple}		H03M 1/10 take precedence)
1/0854	• • {of quantisation noise}	1/1205	• • {Multiplexed conversion systems}
1/0863	• • {of switching transients, e.g. glitches}	1/121	• • { Interleaved, i.e. using multiple converters or
	(converter parts for one channel}

1/1215	• • • {using time-division multiplexing}	1/164	• • • { the steps being performed sequentially in
1/122	{Shared using a single converter or a part		series-connected stages (H03M 1/161 takes
	thereof for multiple channels, e.g. a residue		precedence)}
		1/165	• • • • {in which two or more residues with
	amplifier for multiple stages}	1/103	
1/1225	• • • { using time-division multiplexing }		respect to different reference levels in a
1/123	• • • {Simultaneous, i.e. using one converter per		stage are used as input signals for the next
	channel but with common control or reference		stage, i.e. multi-residue type}
	circuits for multiple converters}	1/167	{all stages comprising simultaneous
		1/10/
