H04M TELEPHONIC COMMUNICATION (circuits for controlling other apparatus <u>via</u> a telephone cable and not involving telephone switching apparatus <u>G08</u>)

NOTES

- 1. This subclass <u>covers</u> :
 - substation equipment;
 - telephonic communication systems combined with other electrical systems;
 - · testing arrangements peculiar to telephonic communication systems.
- 2. In this subclass, the following terms or expressions are used with the meanings indicated :
 - "subscriber" is a general term for terminal equipment, e.g. fixed, wireless, mobile or cellular phones, or for a user of terminal equipment;
 - "substation" means a subscriber or monitoring equipment which may connect a single subscriber to a line without choice as to subscriber;
 - "satellite" is a type of exchange the operation of which depends upon control signals received from a supervisory exchange;
 - "switching centres" include exchanges and satellites.
